

FU-622SLD-2M7/2M3/2M6/2M4

1.48 μm PUMP LD MODULE WITH SINGLEMODE FIBER (EDFA)

DESCRIPTION

Mitsubishi's FU-622SLD series 1480nm laser diode modules are designed as optical pumping sources for erbium-doped fiber amplifier (EDFA). This module is suitable to a light source for use in co-directional pumped EDFA or counter directional pumped EDFA.

FEATURES

- Laser Diode specifically optimized for pump laser applications
- Emission wavelength is in the 1.48 μm band
- Built-in thermal electric cooler
- Butterfly package
- With photodiodes for optical output monitoring
- Diodes are hermetically sealed for high reliability

APPLICATION

Optical pump source for erbium-doped fiber amplifier (EDFA)

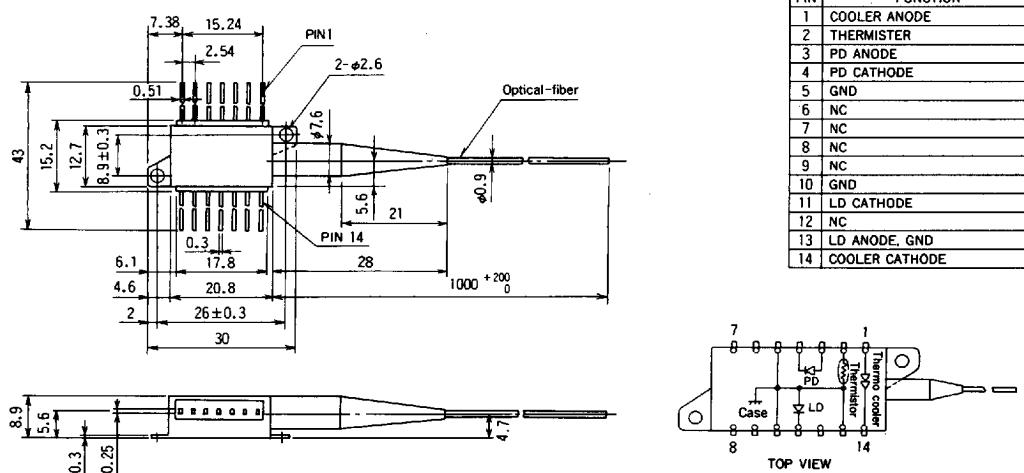

ABSOLUTE MAXIMUM RATINGS (T_{Ld} = 25 °C)

Parameter	Symbol	Conditions	Rating	Unit
Laser diode	Forward current	I _F	CW	800 mA
	Reverse voltage	V _{RL}	—	2 V
Photodiode for monitoring	Reverse voltage	V _{RD}	—	20 V
	Forward current	I _{FD}	—	2 mA
Cooler (Note)	Voltage	V _{pem}	—	4.5 V
	Current	I _{pem}	—	1.8 A
Operating case temperature	T _C	—	- 20 ~ + 65	°C
Storage temperature	T _{stg}	—	- 40 ~ + 70	°C

Note. Even if the thermo-electric cooler (TEC) is operated within the rated conditions, uncontrolled current loading or operation without heatsink may easily damage the module by exceeding the storage temperature range. Thermistor resistance should be properly monitored by the feedback circuit during TEC operation to avoid the catastrophic damage.
