

SONY.**CXB1143Q/Q-Y****Quad 4: 1 Multiplexer with D-FF**

T-68-11-51

Description

The CXB1143Q is an ultra high speed monolithic ECL IC, which contains four 4: 1 multiplexers followed by D type flip flops. The data select (S_0 , S_1) inputs determine which data is enabled. The selected data is transferred to the flip flops output by the positive transition of clock (C) input. The Master Reset (MR) overrides all other control inputs and turns Q outputs to LOW.

Features

- Typical clock rate up to 2.6 GHz
- Differential outputs
- Internal pull down resistors on input pins to maintain logic LOW level with the pins left open
- ECL 100K compatible I/O levels
