

MOTOROLA

Quad 2-Input Data Selector/Multiplexer With 3-State Outputs

ELECTRICALLY TESTED PER:
MIL-M-38510/33906

The 54F257 is a quad 2-input multiplexer with 3-state outputs. Four bits of data from two sources can be selected using a Common Data Select input. The four outputs present the selected data in true (non-inverted) form. The outputs may be switched to a high impedance state with HIGH on the common Output Enable (OE) input, allowing the outputs to interface directly with the bus oriented systems.

- Multiplexer Expansion By Tying Outputs Together
- Non-Inverting 3-State Outputs
- Input Clamp Diodes Limit High-Speed Termination Effects

FUNCTIONAL DESCRIPTION

The F257 is a quad 2-input multiplexer with 3-state outputs. It selects four bits of data from two sources under the control of a Common Data Select input. When the Select input is LOW, the I_0 inputs are selected and when Select is HIGH, I_1 inputs are selected. The data on the selected inputs appears at the outputs in true (noninverted) form. The device is the logic implementation of a 4-pole, 2-position switch where the position of the switch is determined by the logic levels supplied to the Select input. The logic equations for the outputs are shown below:

$$Z_a = \overline{OE} \cdot (I_{1a} \cdot S + I_{0a} \cdot \bar{S}) \quad Z_b = \overline{OE} \cdot (I_{1b} \cdot S + I_{0b} \cdot \bar{S}) \\ Z_c = \overline{OE} \cdot (I_{1c} \cdot S + I_{0c} \cdot \bar{S}) \quad Z_d = \overline{OE} \cdot (I_{1d} \cdot S + I_{0d} \cdot \bar{S})$$

When the Output Enable input ($\overline{OE}$) is HIGH, the outputs are forced to a high impedance OFF state. If the outputs are tied together, all but one device must be in the high impedance state to avoid high currents that would exceed the maximum ratings. Designers should ensure the Output Enable signals to 3-state devices whose outputs are tied together are designed so there is no overlap.

AC TEST CIRCUIT

Test Type	S1
t_{PLH}	open
t_{PHL}	open
t_{PHZ}	open
t_{PZH}	open
t_{PLZ}	closed
t_{PZL}	closed

TRUTH TABLE				
Output Enable	Select Input	Data Inputs		Output
$\overline{OE}$	S	I_0	I_1	Z
H	X	X	X	(Z)
L	H	X	L	L
L	H	X	H	H
L	L	L	X	L
L	L	H	X	H

H = HIGH Voltage Level
L = LOW Voltage Level
X = Immaterial
(Z) = High Impedance

NOTES:

1. V_{IN} = input pulse and has the following characteristics:
PRR $\leq$ 1.0 MHz, $t_r = t_f \leq 2.5$ ns, $Z_{OUT} = 50 \Omega$.
2. Terminal conditions (pins not designated may be high ≥ 2.0 V, low ≤ 0.8 V, or open).
3. $C_L = 50$ pF $\pm 10\%$, including scope probe, wiring and stray capacitance without package in test fixture.
4. $R_1 = R_2 = 499 \Omega \pm 5.0\%$.
5. Voltage measurements are to be made with respect to network ground terminal.
