

**DESCRIPTION**

The M57160AL-01 is an optimal hybrid IC to drive trench gate IGBT module with built-in RTC.

The protective system of this hybrid IC functions with a margin of time by built in protection circuits to maintain a reverse bias for a predetermined time after the detection of an overcurrent (short-circuit). The overcurrent (short-circuit) detector works with the RTC circuit built in IGBT module to detect a drop in this gate voltage for protection. If a gate pin of IGBT is connected with a detective pin of this hybrid IC, there is no need to use high withstand-voltage and high-speed diode or protective Zener diode for monitoring a collector voltage of IGBT.

**OUTLINE DRAWING**

Dimensions : mm

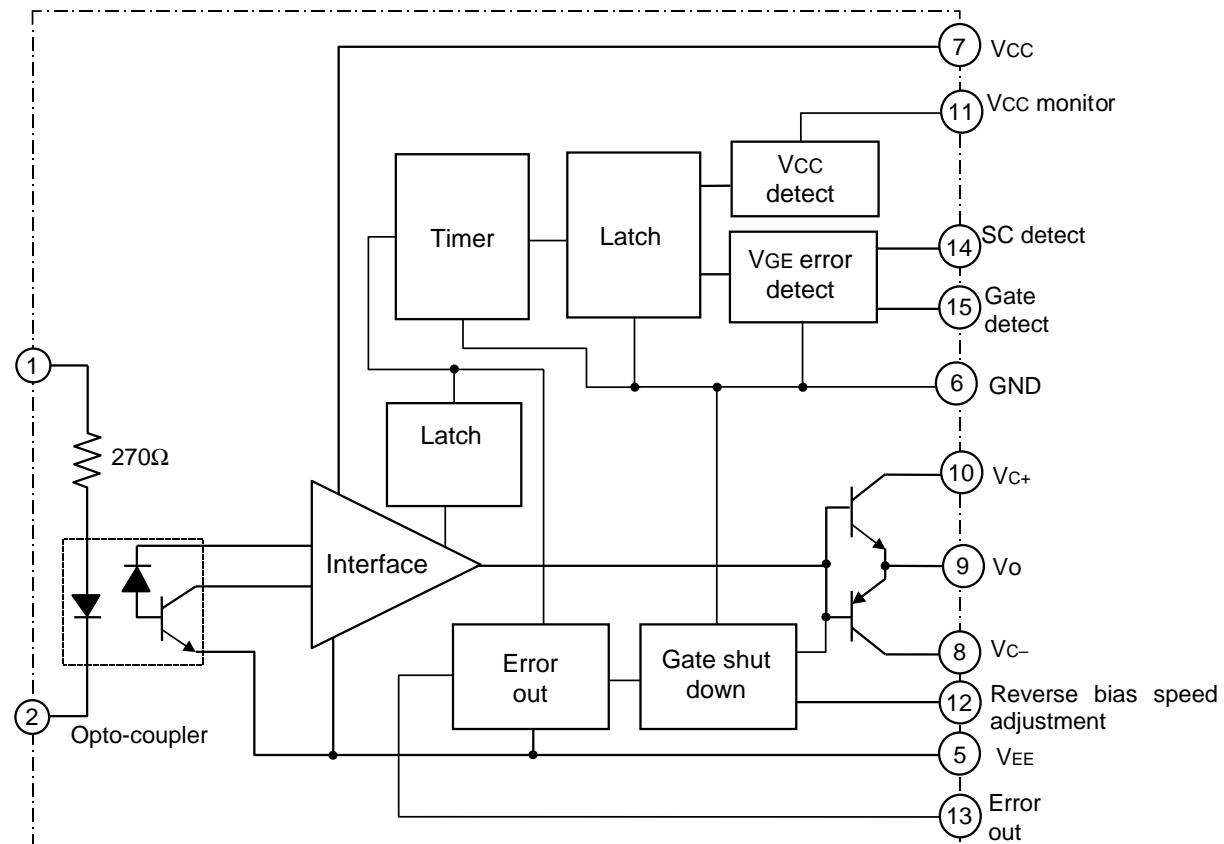

Recommended module ; IGBT module with built-in RTC circuit (Mitsubishi F series)

1200V(600V) ~200A(400A)

**FEATURES**

- Over current(short-circuit)protector built-in(with timer-operated circuit and reset circuit)
- Input-output isolation voltage : 2500Vrms for 1 min

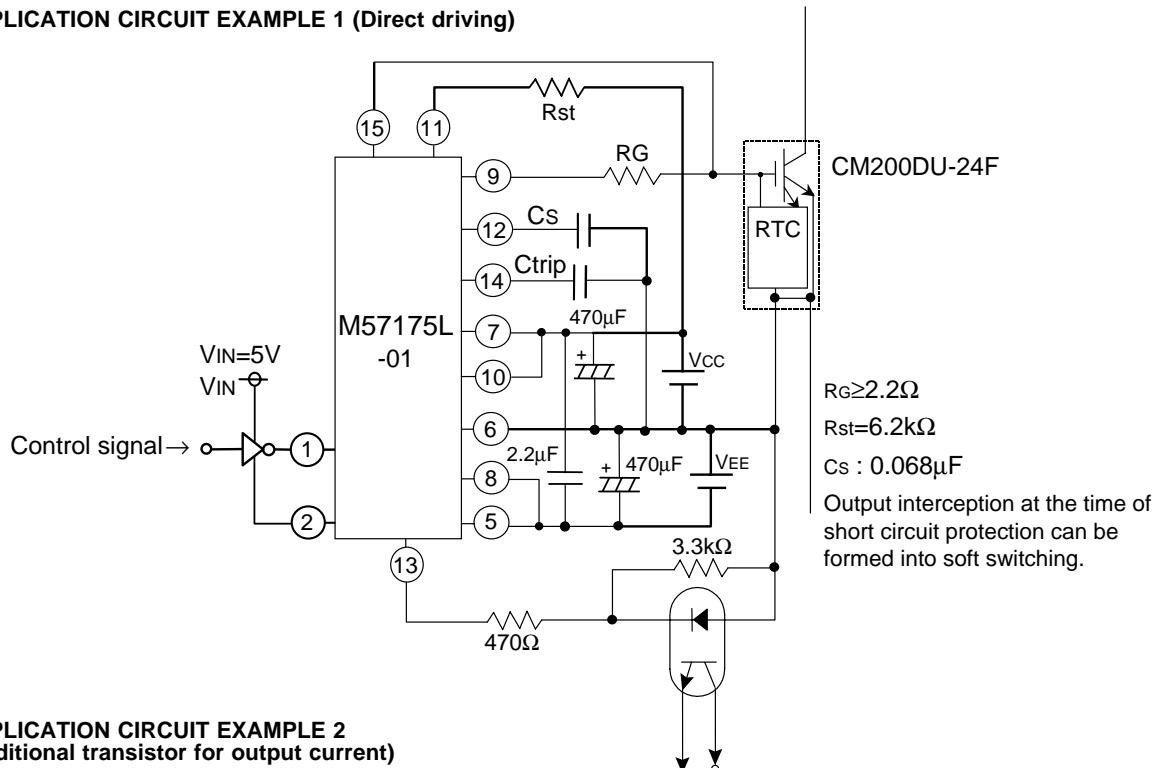

**BLOCK DIAGRAM**

**ABSOLUTE MAXIMUM RATINGS** (Unless otherwise specified, Ta = 25°C)

| Symbol | Parameter             | Conditions                         | Ratings    | Unit |
|--------|-----------------------|------------------------------------|------------|------|
| VCC    | Supply voltage 1      |                                    | 19         | V    |
| VEE    | Supply voltage 2      |                                    | -8         | V    |
| VI     | Input voltages        | Applied between:①-②                | -1 ~ +7    | V    |
| VO     | Output voltages       | At the output voltage "H" VD=15.7V | 16.5       | V    |
| IOHP   | Output current        | Pulse width 1μs, f≤20kHz           | -3.5       | A    |
| IOLP   |                       |                                    | 3.5        | A    |
