Note: 1. The output current maximum value I_{SPNMAX} of SPN driver is controlled according to the following equation. However, V_{SPNCL} is the current limited reference voltage. (See the electrical characteristics)

$$I_{SPNMAX} = \frac{V_{SPNCL}}{R_{NF}}$$

2. The maximum duty D_{MAX} of SLD driver output is controlled according to the following equation.

$$D_{MAX} = \frac{V_{RT}}{V_{HCT3} - V_{LCT3}} \left(\frac{R_{T2}}{R_{T}} - \frac{V_{LCT3}}{V_{RT}} \right) \times 100 (\%)$$

However,

$$R_{T} = R_{T1} + R_{T2}, \quad \frac{R_{T2}}{R_{T}} \geq \frac{V_{LCT3}}{V_{RT}}$$

Where, V_{RT} : RT pin voltage (See the electrical characteristics)

V_{LCT3} : CT3 pin low voltage (≈ 1.3 V)

V_{HCT3} : CT3 pin high voltage (≈ 3.3 V)

Since $V_{RT} \approx V_{HCT3}$, D_{MAX} is not limited at 100% when $R_{T1} = 0 \Omega$.

3. The CLK oscillation frequency is determined by the following equation.

$$f_{CLK} = \frac{V_{RT}}{8 C_{T1} R_{T} \Delta V_{CT1}}$$

Where, V_{RT} : RT pin voltage (See the electrical characteristics)

ΔV_{CT1} : CT1 pin voltage amplitude (≈ 1 V)

4. The C_{T2} for start-up oscillation is determined by the following equation.

$$C_{T2} = \frac{1}{6} \sqrt{\frac{J}{P K_t I_{SPNMAX}}}$$

$$C_{T2} = \frac{T_{C2} V_{RT}}{8 R_{T} (V_{HCT2} - V_{LCT2})}$$

Where, J : Spindle motor inertia ($\text{kg} \cdot \text{cm} \cdot \text{s}^2$)

P : Number of spindle motor poles (Total number of S poles and N poles)

K_t : Spindle motor torque constant ($\text{kg} \cdot \text{cm} / \text{A}$)

V_{HCT2} : CT2 pin high voltage (≈ 3.3 V)

V_{LCT2} : CT2 pin low voltage (≈ 1.3 V)

5. The PWM oscillation frequency f_{PWM} is determined by the following equation.

$$f_{PWM} = \frac{V_{RT}}{8 C_{T3} R_{T} (V_{HCT3} - V_{LCT3})}$$

Where, Vhct3 : CT3 pin high voltage (≈ 3.3 V)

Vlct3 : CT3 pin low voltage (≈ 1.3 V)

6. The C103 to C105 for B-EMF filter are determined by the following equation.

$$C_{103} = \frac{6}{\pi R_{fill} N_o P}$$

Where, Rfill : B-EMF detection output resistor (See the electrical characteristics)

No : Maximum rotation speed (rpm)

7. The FCS and TRR is determined by the following equation.

Voltage drive:

$$G_V = \frac{R_1}{R_{in} + R_2}$$

Current drive:

$$G_m = \frac{R_1}{((R_{in} + R_2) \cdot R_s)}$$

Where, R1 : Resistor of IC inside ($\approx 30k\Omega$)

R2 : Resistor of IC inside ($\approx 7k\Omega$)

R_{in} : Resistor value inserted in the input (Ω)
(R110 to R113)

R_s : Current sense resistor (Ω)

8. The output voltage Vout of voltage regulator is determined by the following equation.

$$V_{out} = 3.3 \left(1 + \frac{R_{r1}}{R_{r2}} \right)$$
