## I2C Bus Transceiver

JLC1563 is an I2C-bus signal transceiver and “conditioner”. Currently, systems complexity and I2C-bus device types and functionality are only increasing. As a result of I2C-bus loading the Clock line and Data line signals degrade. The JLC1563 I2C-Bus Transceiver restores clean signals in the system leading to improvements in system performance and reliability.

This device has two pins, SCL1 (Serial Clock Input) and SDA1 (Serial Data I/O), on the Master I2C-bus side; and two pins, SCL2 (Serial Clock Output) and SDA2 (Serial Data I/O), on the Slave I2C-bus side.

Two reset pins, Reset1 and Reset2, drive separate internal comparators and a system Power-On-Reset function is supported.

### Features

- Low Power Dissipation
- Two Pin Reset/Power-On-Reset
