APPLICATION NOTE

The P0402FC Series are flip-chip components that provide board level EFT and ESD protection > 25 kilovolts with an additional surge capability of 250 Watts P_{pp} per line for an 8/20 μ s waveform.

BIDIRECTIONAL COMMON MODE CONFIGURATION (Figure 1)

The 0402FC Series provides single line, bidirectional protection in a common mode configuration as depicted in Figure 1.

CIRCUIT BOARD LAYOUT RECOMMENDATIONS

Circuit board layout is critical for Electromagnetic Compatibility (EMC) protection. The following guidelines are recommended:

- ◆ The protection device should be placed near the input terminals or connectors, the device will divert the transient current immediately before it can be coupled into the nearby traces.
- ◆ The path length between the TVS device and the protected line should be minimized.
- ◆ All conductive loops including power and ground loops should be minimized.
- ◆ The transient current return path to ground should be kept as short as possible to reduce parasitic inductance.
- ◆ Ground planes should be used whenever possible. For multilayer PCBs, use ground vias.
