Hours Counters

A.C.; D.C. Quartz

BW
BG
BWS

- Large digits 4.4 mm high
- Universal connection
- Fast fixing by ratchet clamp
- Modular plug-in system
- Tactile feel re-set
- Key lock re-set
- High accuracy provided by quartz D.C. version
- Electrical connections finger proof in accordance with VBG 4 (BW 40.X7)

Elapsed time counters

BW 40

for panel mounting
Alternating Current

Special features

- Large format numerals: 4.4 mm in height
- Quick-fix retaining clip
- Easy to connect - screw terminals accessible from rear
- Attachments for other cutouts
- Ring seal for IP 54 - also seals front panel cutout
- UL model on application
- Cable connection on application

Technical Data

Supply voltages (Please state when ordering)	230 V, 50 Hz or 115 V, 50 Hz or 24 V, 50 Hz
Other voltages	on request
Optional frequency	60 Hz
Voltage tolerance	± 15%
Power consumption	approx 1 VA
Counter capacity	99999 h
Accuracy of reading	0.01 h
Numeral height	4.4 mm
Numeral colour	white, decimal figures red
Operation indicator	fast-running wheel
Permitted ambient temperature	-15°...+55°C
Enclosure	self-extinguishing thermoplastic, black
Switchboard flush mounting	housing to DIN 43700
Type of connection	Universal: Screw, soldered and 6.3 x 0.8 mm AMP plug-type connections
Type of protection	Terminals IP 20 Front IP 50 to DIN 40050 (with ring seal 101.003.004 IP 54)
Class of protection	II when fitted in accordance with regulations

Accessories

Retaining bracket for fixing to wall or distribution board	692.006.014
Terminal cover for retaining bracket	003.007.003
Trim 55 x 55 mm	109.003.004
Mask 72 x 72 mm	190.004.004
Mask Ø 72 (for flush mounting-Ø 60 mm)	190.008.004
Mask Ø 72 (for flush mounting-Ø 50.5 mm)	190.009.004
Ring seal for IP 54	101.003.004
Ratchet clamp for BW 40.28	101.001.004

Hours Counters

General technical information

BW
BG
BWS

Use Hours counters are used to monitor and control many different types of machinery:	Hours run	To monitor working hours.
	Standstill time	Machine down-time or time out of use can be monitored.
	Guarantee period	Manufacturers who offer guarantee periods can easily monitor this.
	Service intervals	Unnecessary wear and tear and expensive repairs can be avoided by monitoring time between maintenance.
	Working hours	Companies whose staff work flexi-time can monitor work hours and efficiency.
Types and applications	Counter without reset	For tamper-proof monitoring of hours run.
	Counter with reset	For monitoring service intervals, where the meter can be returned to zero after servicing. Key lock reset also available for extra security.
Technical details	A.C. Type	Types BW 40.X6, BW 30 and BW 70 are driven by a well proven, low noise hysteresis motor. Type BW 40.X7, is driven by a rotating magnet motor, type BW 22 by a well proven low noise, single direction, rotating magnet motor (no reverse lock mechanism necessary). Advantages of these types of motor include long life, fast, secure start, and no accumulated time loss resulting from action of reverse lock.
	D.C. type	The frequency for the step motor is controlled by Quartz crystal (highest time accuracy) and is applied to the motor by an extremely stable electronic circuit. All motors drive the digit rolls through maintenance free gears.
	Re-set to zero	The re-setable types BW 22 and BG 22 feature a newly designed construction which enables the digits to be reset at any time during the running period. This is achieved by disengaging the digits rolls from the drive mechanism for as long as the reset button is depressed. Reset button has tactile-feel mechanism. Unintentional re-set can be avoided by simple adjustment to lock out the reset button. Unauthorized re-set can be avoided by use of key lock types.
Connection details	h = Hours Counter	V = Equipment to be monitored
Measurements	All measurements in mm	Subject to alternation without notice.

1. Operation and release

The counter counts down from preselected time to zero, it opens the contact (continuous contact) at zero, i.e. the contact is maintained if the counter keeps on operating.

2. Preselection

Press the reset button, then set the time requested. After releasing the reset button, the preselection buttons are locked.

3. Reset and Repetition

By pressing the reset button the counter drums are put back to the time set and the contact goes back to its starting position.
