

Bidirectional 3.3 V I/O Transceiver for SCSI-2, SCSI-3, and SCSI-3 Fast-20 Buses (LCBG10P)

Datasheet

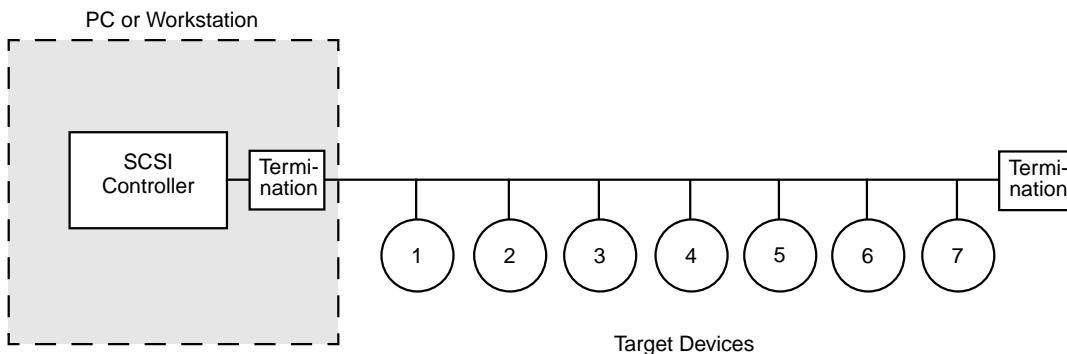

LSI LOGIC

LSI Logic's bidirectional transceiver for SCSI is used to transmit and receive data on a SCSI-2 or SCSI-3 bus. The bus operates at rates up to 20 MHz, with a cable length up to 3 m and maximum stub lengths of 0.1 m. Implementations that limit transfer rates to 5 MHz can extend the cable length to 6 m. SCSI bus termination is assumed to be external to the SCSI device.

This transceiver conforms to the *Information Technology—SCSI-3 Parallel Interface Specification* as well as to the *American National Standard for Information Systems—SCSI-3 Fast-20*, published by the X3T9.2 and X3T10 committees.

This transceiver can operate with SCSI-2, SCSI-3 10-MHz interfaces, or SCSI-3 Fast-20 interfaces. These I/O cells operate at up to 20 MHz. This transceiver is implemented in G10™ technology.

Figure 1 SCSI Bus Interface

Features and Benefits

- ◆ Compliant with *SCSI-3 Parallel Interface Specification*
- ◆ Compliant with the *American National Standard for Information Systems—SCSI-3 Fast-20*
- ◆ Reduces engineering effort of designing an interconnect to SCSI bus
- ◆ V/I characteristics that meet the SCSI bus drive requirements
- ◆ Provides for direct silicon interconnect to a SCSI transmission line
- ◆ On-chip 48 mA drivers
- ◆ 3.3-V V_{DD} (5-V–tolerant)
- ◆ Bidirectional I/O transceiver that provides maximum flexibility in I/O path design
- ◆ Available in the G10 cell-based product families (0.4 micron drawn gate length, 0.29 micron effective channel length)
- ◆ Transfer rates up to 20 MHz
- ◆ Active negation driver

Specifications

The following subsections provide the specifications for the SCSI bidirectional 3.3-V transceivers.

SCSI Bidirectional Transceiver

Name:	BDSESCSIF
Description:	SCSI 3.3-V bidirectional transceiver used with the SCSI-2, SCSI-3, and SCSI-3 Fast-20 buses
Width:	226.8 μm high, 112.0 μm wide
Coding Syntax:	$U(\text{IO}, \text{ZI}, \text{PO}) = \text{BDSESCSIF}(\text{IO}, \text{A}, \text{PI}, \text{EN}, \text{TN}, \text{NEG}, \text{HTPLG}, \text{IDDTN})$

Figure 2 shows the schematic symbol for the bidirectional transceiver.

Note:

- ♦ Values apply over all V_{CC} , temperature, and process conditions.
- ♦ PADS = 1.
- ♦ Slew rate of signal from HIGH to LOW = 520 mV/ns Max Slew (0.7–2.3 V), best case process, temperature, voltage, with 15-pF load, 10–90% of full amplitude.

Cell Placement Restrictions

The following cells are designed to be used with BDSESCSIF in LCBG10p technology:

- ◆ pvdd2_sescsi: To supply vdd2
- ◆ pvdd_sescsi: To supply 3.3 V to the I/O buffer
- ◆ pvss2_sescsi: To supply vss2
- ◆ dvdd_sescsi: Dummy cell for single-ended SCSI cells

The first three cells in this list supply vdd2, 3.3-V I/O buffer, and vss2 to the SCSI buffers. The dvdd_sescsi cell provides a protection diode between vddsescsi and vssio. Adhere to the following guidelines when placing these cells:

1. At least one dummy cell must be placed at both ends of the SCSI section.
2. There must be at least one pvdd_sescsi cell per five SCSI buffers; one V_{SS} per two SCSI buffers.

Power On Reset Cell

Name:	SCSIPOR
Description:	Provides power-up timing to the output and bidirectional cells. This cell must be used; only one is needed for all I/O transceivers.
Width	226.8 μm high, 144.2 μm wide
Coding Syntax	$U(\text{HTPLG}) = \text{SCSIPOR}()$; for 3.3 VDD

Figure 4 shows the schematic symbol for the power on reset cell.
