

## QUARTZ CRYSTAL OSCILLATOR

## ■ GENERAL DESCRIPTION

The NJU6341 series is a C-MOS quartz crystal oscillator which consists of oscillation amplifier, 3-stage divider and output buffer.

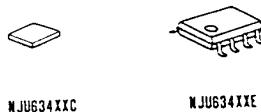

The oscillation frequency is as wide as up to 120MHz and the symmetry of 45-55% is realized over full oscillation frequency range.

The feed-back resistor incorporated on oscillation amplifier enables oscillation by connecting quartz crystal and oscillation capacitors.

Only one output frequency is selected from  $f_0$ ,  $f_0/2$ ,  $f_0/4$  and  $f_0/8$  by internal connection.

The output buffer is TTL compatible and capable of 5 TTL driving.
