

## DM74ALS374

### Octal 3-STATE D-Type Edge-Triggered Flip-Flop

#### General Description

This 8-bit register features totem-pole 3-STATE outputs designed specifically for driving highly-capacitive or relatively low-impedance loads. The high-impedance state and increased high-logic-level drive provides this register with the capability of being connected directly to and driving the bus lines in a bus-organized system without need for interface or pull-up components. It is particularly attractive for implementing buffer registers, I/O ports, bidirectional bus drivers, and working registers.

The eight flip-flops of the ALS374 are edge-triggered D-type flip-flops. On the positive transition of the clock, the Q outputs will be set to the logic states that were set up at the D inputs.

A buffered output control input can be used to place the eight outputs in either a normal logic state (high or low logic levels) or a high-impedance state. In the high-impedance

state the outputs neither load nor drive the bus lines significantly.

The output control does not affect the internal operation of the flip-flops. That is, the old data can be retained or new data can be entered even while the outputs are off.

#### Features

- Switching specifications at 50 pF
- Switching specifications guaranteed over full temperature and  $V_{CC}$  range
- Advanced oxide-isolated, ion-implanted Schottky TTL process
- Functionally and pin-for-pin compatible with LS TTL counterpart
- Improved AC performance over LS374 at approximately half the power
- 3-STATE buffer-type outputs drive bus lines directly

#### Ordering Code:

| Order Number | Package Number | Package Description                                                       |
|--------------|----------------|---------------------------------------------------------------------------|
| DM74ALS374WM | M20B           | 20-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-013, 0.300 Wide |
| DM74ALS374SJ | M20D           | 20-Lead Small Outline Package (SOP), EIAJ TYPE II, 5.3mm Wide             |
| DM74ALS374N  | N20A           | 20-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300 Wide     |

Device also available in Tape and Reel. Specify by appending suffix letter "X" to the ordering code.

#### Connection Diagram

| Output Control | Clock | D | Output Q       |
|----------------|-------|---|----------------|
| L              | ↑     | H | H              |
| L              | ↑     | L | L              |
| L              | L     | X | Q <sub>0</sub> |
| H              | X     | X | Z              |

L = LOW State  
H = HIGH State  
X = Don't Care  
↑ = Positive Edge Transition  
Z = High Impedance State  
Q<sub>n</sub> = Previous Condition of Q

### Logic Diagram

**Absolute Maximum Ratings**(Note 1)

|                                      |                 |
|--------------------------------------|-----------------|
| Supply Voltage                       | 7V              |
| Input Voltage                        | 7V              |
| Voltage Applied to Disabled Output   | 5.5V            |
| Operating Free Air Temperature Range | 0°C to +70°C    |
| Storage Temperature Range (Note 2)   | –65°C to +150°C |
| Typical $\theta_{JA}$                |                 |
| N Package                            | 60.0°C/W        |
| M Package                            | 79.0°C/W        |

**Note 1:** The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

**Note 2:** This product meets application requirements of 500 temperature cycles from –65°C to +150°C.

**Recommended Operating Conditions**

| Symbol      | Parameter                      | Min           | Nom | Max  | Units |
|-------------|--------------------------------|---------------|-----|------|-------|
| $V_{CC}$    | Supply Voltage                 | 4.5           | 5   | 5.5  | V     |
| $V_{IH}$    | HIGH Level Input Voltage       | 2             |     |      | V     |
| $V_{IL}$    | LOW Level Input Voltage        |               |     | 0.8  | V     |
| $I_{OH}$    | HIGH Level Output Current      |               |     | –2.6 | mA    |
| $I_{OL}$    | LOW Level Output Current       |               |     | 24   | mA    |
| $f_{CLOCK}$ | Clock Frequency                | 0             |     | 35   | MHz   |
| $t_W$       | Width of Clock Pulse           | HIGH          | 14  |      | ns    |
|             |                                | LOW           | 14  |      | ns    |
| $t_{SU}$    | Data Setup Time (Note 3)       | 10 $\uparrow$ |     |      | ns    |
| $t_H$       | Data Hold Time (Note 3)        | 0 $\uparrow$  |     |      | ns    |
| $T_A$       | Free Air Operating Temperature | 0             |     | 70   | °C    |

**Note 3:** The ( $\uparrow$ ) arrow indicates the positive edge of the Clock is used for reference.

**DC Electrical Characteristics**

over recommended operating free air temperature range. All typical values are measured at  $V_{CC} = 5V$ ,  $T_A = 25^\circ C$ .

### LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
