

## AM / FM - PLL

### Description

The U4287BM is an integrated circuit in BICMOS technology for frequency synthesizer. It performs all the functions of a PLL radio tuning system and is controlled by I<sup>2</sup>C bus. The device is designed for all frequency syn-

thesizer applications of radio receivers, as well as RDS (Radio Data System) applications, and others up to 184 MHz in FM mode.

### Features

- Reference oscillator up to 15 MHz
- Two programmable 16 bit dividers adjustable from 2 to 65535
- Fine tuning steps: AM  $\geq$  1 kHz  
FM  $\geq$  2 kHz
- Three programmable switching outputs (open drain up to 20 V)
- Few external component requirements due to integrated loop-transistor for AM/FM
- High signal/noise ratio

### Block Diagram

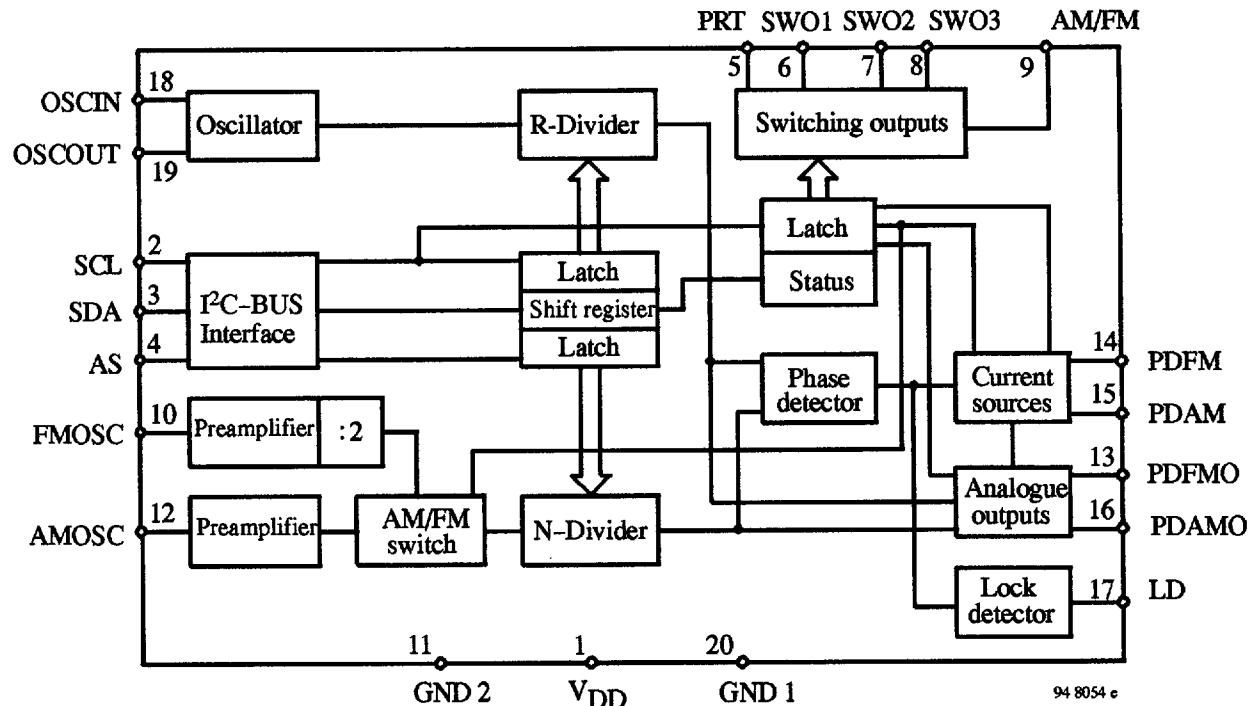

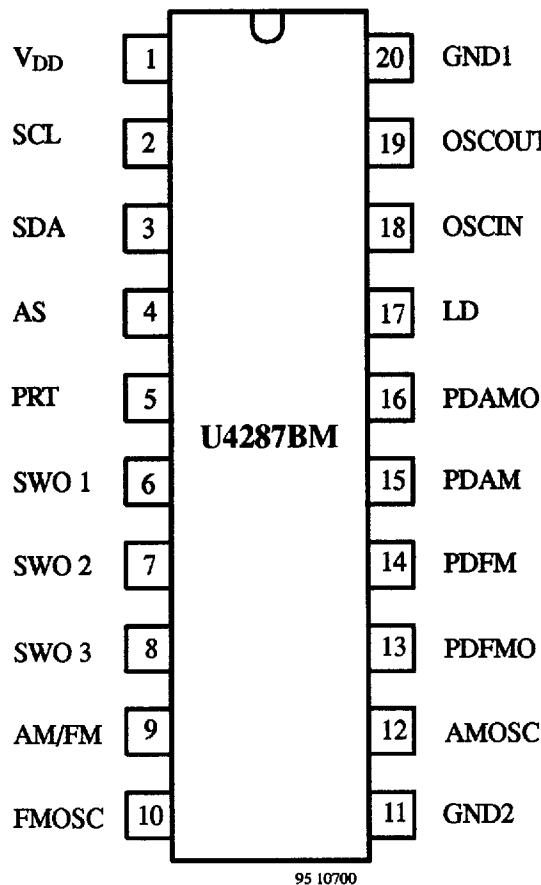

Figure 1.

## Pin Description

The diagram shows the pin layout for the U4287BM. Pin 1 is V<sub>DD</sub>, Pin 2 is SCL, Pin 3 is SDA, Pin 4 is AS, Pin 5 is PRT, Pin 6 is SWO 1, Pin 7 is SWO 2, Pin 8 is SWO 3, Pin 9 is AM/FM, Pin 10 is FMOSC, Pin 11 is GND2, Pin 12 is AMOSC, Pin 13 is PDFMO, Pin 14 is PDFM, Pin 15 is PDAM, Pin 16 is PDAMO, Pin 17 is LD, Pin 18 is OSCIN, Pin 19 is OSCOUT, and Pin 20 is GND1.

| Pin | Symbol           | Function                   |
|-----|------------------|----------------------------|
| 1   | V <sub>DD</sub>  | Supply voltage             |
| 2   | SCL              | I <sup>2</sup> C bus clock |
| 3   | SDA              | I <sup>2</sup> C bus data  |
| 4   | AS               | Address selection          |
| 5   | PRT              | Switching port             |
| 6   | SWO 1            | Switching output 1         |
| 7   | SWO 2            | Switching output 2         |
| 8   | SWO3             | Switching output 3         |
| 9   | AM/FM            | Switching output AM/FM     |
| 10  | FMOSC            | FM oscillator input        |
| 11  | GND 2 (analogue) | Ground 2 (analogue)        |
| 12  | AMOSC            | AM oscillator input        |
| 13  | PDFMO            | FM analogue output         |
| 14  | PDFM             | FM current output          |
| 15  | PDAM             | AM current output          |
| 16  | PDAMO            | AM analogue output         |
| 17  | LD               | Lock detector              |
| 18  | OSCIN            | Oscillator input           |
| 19  | OSCOUT           | Oscillator output          |
| 20  | GND 1 (digital)  | Ground 1 (digital)         |

## Functional Description

The U4287BM is controlled via the 2-wire I<sup>2</sup>C bus. For programming there are one module address byte, two sub-address bytes and five data bytes.

The module address contains a programmable address bit A 1 which with address select input AS (pin 4) makes it possible to operate two U4287BM-B in one system. If bit A 1 is identical with the status of the address select input AS, the chip is selected.

The subaddress determines which one of the data bytes is transmitted first. If subaddress of R-divider is transmitted, the sequence of the next data bytes is DB 0 (Status), DB 1 and DB 2.

If subaddress of N-divider is transmitted, the sequence of the next data bytes is DB 3 and DB 4. The bit organisation of the module address, subaddress and 5 data bytes are shown in figure 2.

Each transmission on the I<sup>2</sup>C bus begins with the "START"-condition and has to be ended by the "STOP"-condition (see figure 3).

The integrated circuit U4287BM has two separate inputs for AM and FM oscillator. Pre-amplified AM signal is directed to the 16 bit N-divider via AM/FM switch, whereas (pre-amplified) FM signal is first divided by a fixed prescaler (:2). AM/FM switch is controlled by software. Tuning steps can be selected by 16 bit R-divider. Further there is a digital memory phase detector. There are two separate current sources for AM and FM amplifier (charge pump) as given in electrical characteristics. It allows independent adjustment of gain, whereby providing high current for high speed tuning and low current for stable tuning.

## Bit Organisation

|                | MSB |    |    |    |    |    |     | LSB |

| <b>Setup Time</b>  |                        |             |      |      |      |         |
| Start condition  |                        | $t_{sSTA}$  | 4.7  |      |      | $\mu s$ |
| Data   |                        | $t_{sDAT}$  | 250  |      |      | ns      |
| Stop condition   |                        | $t_{sSTOP}$ | 4.7  |      |      | $\mu s$ |
| Time the bus must be free before a new transmission can be started |                        | $t_{wSTA}$  | 4.7  |      |      | $\mu s$ |
| <b>Hold time</b>   |                        |             |      |      |      |         |
| Start condition  |                        | $t_{hSTA}$  | 4.0  |      |      | $\mu s$ |
| DATA   |                        | $t_{hDAT}$  | 0    |      |      | $\mu s$ |

## Bus Timing

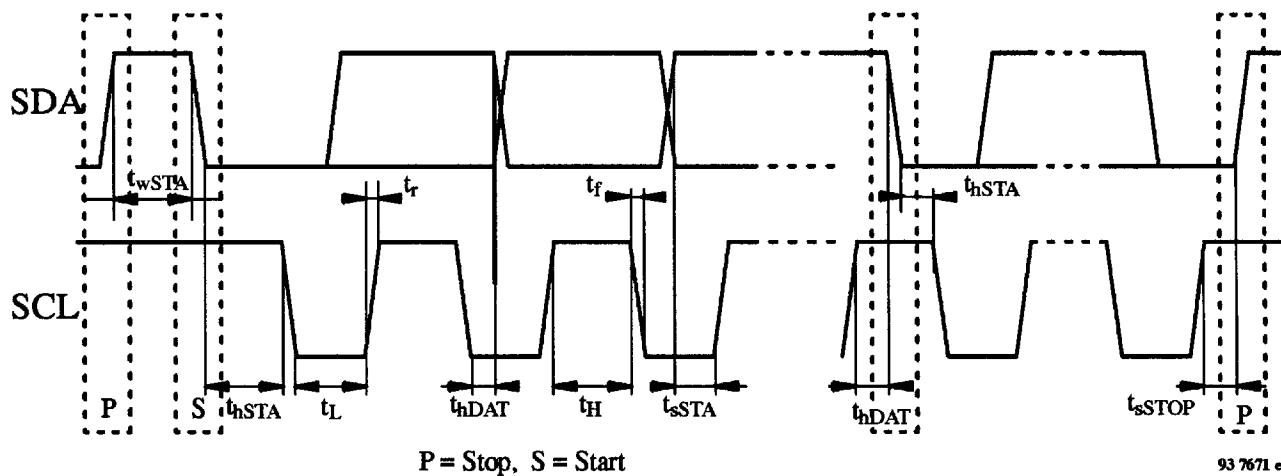

Figure 4.

### The following hints are recommended:

- $C_3 = 100 \text{ nF}$  should be very close to pin 1 ( $V_{DD}$ ) and Pin 20 (GND 1)
- GND 2 (Pin 10 – analogue ground) and GND 1 (Pin 20 – digital ground) must be connected according to figure 6
- 4 MHz quartz must be very close to Pin 18 and Pin 19
- Components of the charge pump ( $C_1/R_1$  for AM and  $C_2/R_2$  for FM) should be very close to Pin 15 with respect to Pin 14.

## Application Circuit

## Ordering and Package Information

| Extended Type Number | Package       | Remarks |
|----------------------|---------------|---------|
| U4287BM-BFS          | SSO20 plastic |         |

## Dimensions in mm

Package: SSO20
