An ON Semiconductor Company

LC75810E
LC75810T

CMOS IC

1/8 to 1/10 Duty Dot Matrix LCD Display Controllers/Drivers

Overview

The LC75810E and LC75810T are 1/8 to 1/10 duty dot matrix LCD display controllers/drivers that support the display of characters, numbers, and symbols. In addition to generating dot matrix LCD drive signals based on data transferred serially from a microcontroller, the LC75810E and LC75810T also provide on-chip character display ROM and RAM to allow display systems to be implemented easily.

Features

- Controls and drives a 5×7 , 5×8 , or 5×9 dot matrix LCD.
- Supports accessory display segment drive (up to 80 segments)
- Display technique:
 - 1/8-duty, 1/4-bias drive (5×7 dots, 6×7 dots)
 - 1/9-duty, 1/4-bias drive (5×8 dots, 6×8 dots)
 - 1/10-duty, 1/4-bias drive (5×9 dots, 6×9 dots)
- Display digits:
 - 16 digits \times 1 line (5×7 dots),
 - 15 digits \times 1 line (5×8 or 5×9 dots)
 - 13 digits \times 1 line (6×7 , 6×8 , or 6×9 dots)
- Display control memory
 - CGROM: 240 characters (5×7 , 5×8 , or 5×9 dots)
 - CGRAM: 16 characters (5×7 , 5×8 , or 5×9 dots)
 - DCRAM: 64×8 bits
 - ALATCH: 80 bits
- Instruction function
 - Display on/off control
 - Smooth up, down, left, and right scrolling of the display
- Provides a backup function based on power saving mode
- The frame frequency of the common and segment output waveforms can be controlled by instructions.
- Built-in display contrast adjustment circuit
- Serial data input supports CCB format communication with the system controller
- Independent LCD driver block power supply V_{LCD}
- Provides a \overline{RES} pin for IC internal initialization.
- RC oscillator circuit

- CCB is a trademark of SANYO ELECTRIC CO., LTD.
- CCB is SANYO's original bus format and all the bus addresses are controlled by SANYO.

- Any and all SANYO Semiconductor products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your SANYO Semiconductor representative nearest you before using any SANYO Semiconductor products described or contained herein in such applications.
- SANYO Semiconductor assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO Semiconductor products described or contained herein.

Pin Functions

Pin	Pin No.		Function	Active level	I/O	Handling when unused
	LC75810E	LC75810T				
S1 to S78 S79/COM10 S80/COM9	3 to 80 81 82	1 to 78 79 80	Segment driver outputs The S79/COM10 and S80/COM9 pins can be used as common driver outputs under the "set display technique" instruction.	–	O	OPEN
COM1 to COM8	90 to 83	88 to 81	Common driver outputs	–	O	OPEN
OSC	98	96	Oscillator connection. An oscillator circuit is formed by connecting an external resistor and capacitor at this pin.	–	I/O	VDD
CE	100	98	Serial data transfer inputs. These pins are connected to the microcontroller. CE: Chip enable CL: Synchronization clock DI: Transfer data	H	I	GND
CL	1	99			I	
DI	2	100		–	I	
$\overline{\text{RES}}$	99	97	Reset signal input <ul style="list-style-type: none"> • When $\overline{\text{RES}}$ is low (V_{SS}) <ul style="list-style-type: none"> – Display off S1 to S78 = "L" (V_{SS}) S79/COM10 and S80/COM9 = "L" (V_{SS}) COM1 to COM8 = "L" (V_{SS}) – Serial data transfer is disabled. – The OSC pin oscillator is stopped. <ul style="list-style-type: none"> • When $\overline{\text{RES}}$ is high (V_{DD}) <ul style="list-style-type: none"> – Display on after a "display on/off control" (display on state setting) instruction is executed. – Serial data transfers are enabled. – The OSC pin oscillator operates. 	L	I	GND
V_{LCD0}	93	91	LCD drive 4/4 bias voltage (high level) supply pin. The level on this pin can be changed by the display contrast adjustment circuit. However, V_{LCD0} must be greater than or equal to 4.5 V. Also, external power must not be applied to this pin since the pin circuit includes the display contrast adjustment circuit.	–	O	OPEN
V_{LCD1}	94	92	LCD drive 3/4 bias voltage (middle level) supply pin. This pin can be used to supply the 3/4 V_{LCD0} voltage level externally.	–	I	OPEN
V_{LCD2}	95	93	LCD drive 2/4 bias voltage (middle level) supply pin. This pin can be used to supply the 2/4 V_{LCD0} voltage level externally.	–	I	OPEN
V_{LCD3}	96	94	LCD drive 1/4 bias voltage (middle level) supply pin. This pin can be used to supply the 1/4 V_{LCD0} voltage level externally.	–	I	OPEN
V_{DD}	91	89	Logic block power supply connection. Provide a voltage of between 2.7 and 6.0 V.	–	–	–
V_{LCD}	92	90	LCD driver block power supply connection. Provide a voltage of between 7.0 and 10.0 V when the display contrast adjustment circuit is used and provide a voltage of between 4.5 and 10.0 V when the circuit is not used.	–	–	–
V_{SS}	97	95	Power supply connection. Connect to ground.	–	–	–

Block Functions

• AC (Address counter)

AC is a counter that provides the DCRAM address.

The address is automatically modified internally, and the LCD display state is retained.

• DCRAM (Data control RAM)

DCRAM is the RAM that is used to store display data expressed as 8-bit character codes. (These character codes are converted to 5×7 , 5×8 , or 5×9 dot matrix character patterns using CGROM or CGRAM.)

DCRAM has a capacity of 64×8 bits, and can hold 64 characters. The table below lists the correspondence between the 6-bit DCRAM address loaded into AC and the display position on the LCD panel.

- For a $64 \text{ digits} \times 1 \text{ line}$ display structure (For a “set display technique” instruction with $0Z1 = 0$ and $0Z2 = 0$)
When the DCRAM address loaded into AC is 00H

Display digit		1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18		61	62	63	64
DCRAM address (hexadecimal)	First line	00	01	02	03	04	05	06	07	08	09	0A	0B	0C	0D	0E	0F	10	11		3C	3D	3E	3F

However, when the display smooth scrolling is performed, the DCRAM address shifts as follows.

Display digit		1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18		61	62	63	64
DCRAM address (hexadecimal)	First line	01	02	03	04	05	06	07	08	09	0A	0B	0C	0D	0E	0F	10	11	12		3D	3E	3F	00

Shift to the left by 1 character digit

Display digit		1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18		61	62	63	64
DCRAM address (hexadecimal)	First line	3F	00	01	02	03	04	05	06	07	08	09	0A	0B	0C	0D	0E	0F	10		3B	3C	3D	3E

Shift to the right by 1 character digit

Note that the display area on the LCD is display digits 1 to 16 on the first line when a display technique is 5×7 , 5×8 , or 5×9 dots, and it is display digits 1 to 13 on the first line when a display technique is 6×7 , 6×8 , or 6×9 dots.

- For a $32 \text{ digits} \times 2 \text{ lines}$ display structure (For a “set display technique” instruction with $0Z1 = 1$ and $0Z2 = 0$)
When the DCRAM address loaded into AC is 00H

Display digit		1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18		29	30	31	32
DCRAM address (hexadecimal)	First line	00	01	02	03	04	05	06	07	08	09	0A	0B	0C	0D	0E	0F	10	11		1C	1D	1E	1F
	Second line	20	21	22	23	24	25	26	27	28	29	2A	2B	2C	2D	2E	2F	30	31		3C	3D	3E	3F

However, when the display smooth scrolling is performed, the DCRAM address shifts as follows.

Display digit		1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18		29	30	31	32
DCRAM address (hexadecimal)	First line	01	02	03	04	05	06	07	08	09	0A	0B	0C	0D	0E	0F	10	11	12		1D	1E	1F	00
	Second line	21	22	23	24	25	26	27	28	29	2A	2B	2C	2D	2E	2F	30	31	32		3D	3E	3F	20

Shift to the left by 1 character digit

Display digit		1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18		29	30	31	32
DCRAM address (hexadecimal)	First line	1F	00	01	02	03	04	05	06	07	08	09	0A	0B	0C	0D	0E	0F	10		1B	1C	1D	1E
	Second line	3F	20	21	22	23	24	25	26	27	28	29	2A	2B	2C	2D	2E	2F	30		3B	3C	3D	3E

Shift to the right by 1 character digit

Display digit		1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18		29	30	31	32
DCRAM address (hexadecimal)	First line	20	21	22	23	24	25	26	27	28	29	2A	2B	2C	2D	2E	2F	30	31		3C	3D	3E	3F
	Second line	00	01	02	03	04	05	06	07	08	09	0A	0B	0C	0D	0E	0F	10	11		1C	1D	1E	1F

Shift to the up or down by 1 character digit

Note that the display area on the LCD is display digits 1 to 16 on the first line when a display technique is 5×7 , 5×8 , or 5×9 dots, and it is display digits 1 to 13 on the first line when a display technique is 6×7 , 6×8 , or 6×9 dots.

LC75810E/T

- For a 16 digits × 4 lines display structure (For a “set display technique” instruction with 0Z1 = 0 and 0Z2 = 1)
When the DCRAM address loaded into AC is 00H

Display digit	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16

	Fourth line	00	01	02	03	04	05	06	07	08	09	0A	0B	0C	0D	0E	0F

Shift to the up by 1 character digit

Display digit	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	
DCRAM address (hexadecimal)	First line	30	31	32	33	34	35	36	37	38	39	3A	3B	3C	3D	3E	3F
	Second line	00	01	02	03	04	05	06	07	08	09	0A	0B	0C	0D	0E	0F
	Third line	10	11	12	13	14	15	16	17	18	19	1A	1B	1C	1D	1E	1F
	Fourth line	20	21	22	23	24	25	26	27	28	29	2A	2B	2C	2D	2E	2F

Shift to the down by 1 character digit

Note that the display area on the LCD is display digits 1 to 16 on the first line when a display technique is 5 × 7, 5 × 8, or 5 × 9 dots, and it is display digits 1 to 13 on the first line when a display technique is 6 × 7, 6 × 8, or 6 × 9 dots.

Note *2: The DCRAM address is expressed in hexadecimal.

Example: When the DCRAM address is 2EH

DA0	DA1	DA2	DA3	DA4	DA5
0	1	1	1	0	1

Note *3: 5 × 7 dots ... 16-digit display 5 × 7 dots.
 5 × 8 dots ... 16-digit display 4 × 8 dots.
 5 × 9 dots ... 16-digit display 3 × 9 dots.
 6 × 7 dots ... 13-digit display 6 × 7 dots.
 6 × 8 dots ... 13-digit display 6 × 8 dots.
 6 × 9 dots ... 13-digit display 6 × 9 dots.

- CGROM (Character generator ROM)
CGROM is the ROM that is used to generate the 240 kinds of 5×7 , 5×8 , or 5×9 dot matrix character patterns from the 8-bit character codes. CGROM has a capacity of 240×45 bits. When a character code is written to DCRAM, the character pattern stored in the CGROM corresponding to the character code is displayed at the position on the LCD corresponding to the DCRAM address loaded into AC.
- CGRAM (Character generator RAM)
CGRAM is the RAM to which user programs can freely write arbitrary character patterns. Up to 16 kinds of 5×7 , 5×8 , or 5×9 dot matrix character patterns can be stored. CGRAM has a capacity of 16×45 bits.
- ALATCH (Additional data latch)
ALATCH is the latch that is used to store the ADATA display data for the accessory display. ALATCH has a capacity of 80 bits, and the stored display data is displayed directly without the use of CGROM or CGRAM.
- SC (Scroll counter)
SC is the counter that is used to scroll the display in the left, right, up, or down directions in dot units. Since this function scrolls in dot units, it implements smooth scrolling.

Reset Function

The LC75810E and LC75810T are reset when a low level is applied to the $\overline{\text{RES}}$ pin at power on and, in normal mode. On a reset the LC75810E and LC75810T create a display with all LCD panels turned off. However, after a reset applications must set the contents of DCRAM, ALATCH, and CGRAM before turning on display with a “display on/off control” instruction since the contents of these memories are undefined. That is, applications must execute the following instructions.

- Set display technique
- DCRAM data write
- ALATCH data write (If ALATCH is used.)
- CGRAM data write (If CGRAM is used.)
- Set AC and SC addresses
- Set display contrast (If the display contrast adjustment circuit is used.)

After executing the above instructions, applications must turn on the display with a “display on/off control” instruction. Note that when applications turn off in the normal mode, applications must turn off the display with a “display on/off control” instruction. (See the detailed instruction descriptions.)

Serial Data Transfer Format

- When CL is stopped at the low level

- When CL is stopped at the high level

- CCB address: 4EH
- D0 to D143: Instruction data
The data is acquired on the rising edge of the CL signal and latched on the falling edge of the CE signal. When transferring instruction data from the microcontroller, applications must assure that the time from the transfer of one set of instruction data until the next instruction data transfer is significantly longer than the instruction execution time.

Instruction Table

X: don't care

Notes *4: The execution times listed here apply when fosc = 300 kHz. The execution times differ when the oscillator frequency fosc differs.

Example: When fosc = 210 kHz

$$27 \mu s \times \frac{300}{210} = 39 \mu s \quad 162 \mu s \times \frac{300}{210} = 232 \mu s \quad t_i \mu s \times \frac{300}{210} = t_i \times 1.43 \mu s \quad 40.5 \mu s \times \frac{300}{210} = 58 \mu s$$

*5: Note that when the power saving mode (BU = 1) is set, the execution time is 27 μs (when fosc = 300 kHz).

*6: The execution time must be seen as being 162 μs (when fosc = 300 kHz) if another "display scroll" instruction is executed immediately after a preceding "display scroll" instruction.

*7, *8: Note that the data format differs when a "DCRAM data write" instruction is executed in normal increment mode (IM1 = 1, IM2 = 0) or super-increment mode (IM1 = 0, IM2 = 1).

Also note that the execution time is ti μs (when fosc = 300 kHz) if a "DCRAM data write" instruction is executed in super-increment mode. (See detailed instruction descriptions.)

*9, *10: Note that the data format differs when a "CGRAM data write" instruction is executed in double write mode (WM = 1). Also note that the execution time is 40.5 μs (when fosc = 300 kHz) if a "CGRAM data write" instruction is executed in double write mode. (See detailed instruction descriptions.)

OZ1	OZ2	DW	X	X	X	X	X	DT1	DT2	FC	0	0	0	0	1

X: don't care

DT1, DT2: Set the display technique

DT1	DT2	Display technique	Output pins	
			S80/COM9	S79/COM10
0	0	1/8 duty, 1/4 bias drive	S80	S79
1	0	1/9 duty, 1/4 bias drive	COM9	S79
0	1	1/10 duty, 1/4 bias drive	COM9	COM10

*11: Sn (n = 79, 80): Segment output
COMn (n = 9, 10): Common output

FC: Set the frame frequency of the common and segment output waveforms

FC	Frame frequency		
	1/8 duty, 1/4 bias drive f8[Hz]	1/9 duty, 1/4 bias drive f9[Hz]	1/10 duty, 1/4 bias drive f10[Hz]
0	$\frac{f_{osc}}{3072}$	$\frac{f_{osc}}{3456}$	$\frac{f_{osc}}{3840}$
1	$\frac{f_{osc}}{1536}$	$\frac{f_{osc}}{1728}$	$\frac{f_{osc}}{1920}$

OZ1, OZ2: Set the display structure

OZ1	OZ2	Display structure
0	0	64 digits × 1 line display structure
1	0	32 digits × 2 lines display structure
0	1	16 digits × 4 lines display structure

*12: See block functions (DCRAM)

DW: Set the dot font width

DW	Dot font width	Number of display digits
0	5-dot font width	16 digits × 1 line (5 × 7 dots), 15 digits × 1 line (5 × 8 or 5 × 9 dots)
1	6-dot font width	13 digits × 1 line (6 × 7, 6 × 8, or 6 × 9 dots)

*13: • 5-dot font width (5 × 7, 5 × 8, or 5 × 9 dots)

• 6-dot font width (6 × 7, 6 × 8, or 6 × 9 dots)

LC75810E/T

• Display on/off control ... <Turns the display on or off.>

Code																								
D120	D121	D122	D123	D124	D125	D126	D127	D128	D129	D130	D131	D132	D133	D134	D135	D136	D137	D138	D139	D140	D141	D142	D143	
DG1	DG2	DG3	DG4	DG5	DG6	DG7	DG8	DG9	DG1	DG1	DG1	DG1	DG1	DG1	DG1	DG1	M	A	SC	BU	0	0	1	0
									0	1	2	3	4	5	6									

M, A: Specifies the data to be turned on or off.

M	A	Display operating state
0	0	Both MDATA and ADATA are turned off. (The display is forcibly turned off, regardless of the DG1 to DG16 data.)
0	1	Only ADATA is turned on. (The ADATA of display digits specified by the DG1 to DG16 data are turned on.)
1	0	Only MDATA is turned on. (The MDATA of display digits specified by the DG1 to DG16 data are turned on.)
1	1	Both MDATA and ADATA are turned on. (The MDATA and ADATA of display digits specified by the DG1 to DG16 data are turned on.)

*14: MDATA, ADATA

5 × 7 dot matrix

5 × 8 dot matrix

5 × 9 dot matrix

6 × 7 dot matrix

6 × 8 dot matrix

6 × 9 dot matrix

DG1 to DG16: Specifies the display digit.

Display digit	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Display digit data	DG1	DG2	DG3	DG4	DG5	DG6	DG7	DG8	DG9	DG10	DG11	DG12	DG13	DG14	DG15	DG16

For example, if DG1 to DG8 are 1, and DG9 to DG16 are 0, then display digits 1 to 8 will be turned on, and display digits 9 to 16 will be turned off (blanked).

SC: Controls the common and segment output pins.

SC	Common and segment output pin states
0	Output of LCD drive waveforms
1	Fixed at the V _{SS} level (all segments off)

Note *15: When SC is 1, the S1 to S8 and COM1 to COM10 output pins are set to the V_{SS} level, regardless of the M, A, and DG1 to DG16 data.

BU: Controls the normal mode and power saving mode.

BU	Mode
0	Normal mode
1	Power saving mode (In this mode, the OSC pin oscillator is stopped, and the common and segment pins are set to the V _{SS} level. In this mode, instructions other than the "display on/off control" and "set display contrast" instructions cannot be executed. Thus applications must set the IC to normal mode before executing any of the other instructions.)

X: don't care

HS0 to HS2: Set the amount of smooth scrolling to be applied to MDATA in the left/right direction.

HS0	HS1	HS2	Amount of smooth scrolling to be applied to MDATA in the left/right direction
0	0	0	No shift in either the left or right direction
1	0	0	Shift 1 dot to the left or right. (The shift direction (left or right) is specified with the R/L data.)
0	1	0	Shift 2 dots to the left or right. (The shift direction (left or right) is specified with the R/L data.)
1	1	0	Shift 3 dots to the left or right. (The shift direction (left or right) is specified with the R/L data.)
0	0	1	Shift 4 dots to the left or right. (The shift direction (left or right) is specified with the R/L data.)
1	0	1	Shift 5 dots to the left or right. (The shift direction (left or right) is specified with the R/L data.)
0	1	1	Shift 6 dots to the left or right. (The shift direction (left or right) is specified with the R/L data.)

VS0 to VS3: Set the amount of smooth scrolling to be applied to MDATA in the up/down direction.

VS0	VS1	VS2	VS3	Amount of smooth scrolling to be applied to MDATA in the up/down direction
0	0	0	0	No shift in either the up or down direction
1	0	0	0	Shift 1 dot to the up or down. (The shift direction (up or down) is specified with the D/U data.)
0	1	0	0	Shift 2 dots to the up or down. (The shift direction (up or down) is specified with the D/U data.)
1	1	0	0	Shift 3 dots to the up or down. (The shift direction (up or down) is specified with the D/U data.)
0	0	1	0	Shift 4 dots to the up or down. (The shift direction (up or down) is specified with the D/U data.)
1	0	1	0	Shift 5 dots to the up or down. (The shift direction (up or down) is specified with the D/U data.)
0	1	1	0	Shift 6 dots to the up or down. (The shift direction (up or down) is specified with the D/U data.)
1	1	1	0	Shift 7 dots to the up or down. (The shift direction (up or down) is specified with the D/U data.)
0	0	0	1	Shift 8 dots to the up or down. (The shift direction (up or down) is specified with the D/U data.)
1	0	0	1	Shift 9 dots to the up or down. (The shift direction (up or down) is specified with the D/U data.) (*16)
0	1	0	1	Shift 10 dots to the up or down. (The shift direction (up or down) is specified with the D/U data.) (*17)

Notes: *16: This shift cannot be used when MDATA is 5 × 7 or 6 × 7 dots.

*17: This shift cannot be used when MDATA is 5 × 7, 5 × 8, 6 × 7 or 6 × 8 dots.

R/L: Specifies the MDATA shift direction (left or right).

R/L	MDATA shift direction (left or right)
0	Shift left
1	Shift right

D/U: Specifies the MDATA shift direction (up or down).

D/U	MDATA shift direction (up or down)
0	Shift up
1	Shift down

*18 Example of the “display scroll” instruction execution

Assume that a 32 digits × 2 lines display structure (OZ1 = 1, OZ2 = 0) has been set up with the “set display technique” instruction, and that the following data has been written to DCRAM with the “DCRAM data write” instruction.

Display digit	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	32

LC75810E/T

*19 The figure below lists the correspondence between the data HA0 to HA2 which is dot address in the horizontal direction and the dot matrix character pattern, and the correspondence between the data VA0 to VA3 which is dot address in the vertical direction and the dot matrix character pattern.

• 5-dot font width: 5×7 , 5×8 , or 5×9 dots

- The area at HA0 to 2 = 5H is allocated to the space at the right of the dot matrix character pattern.
- The area at VA0 to 3 = 7H, for 5×7 dot characters, is allocated to the space at the bottom of the dot matrix character pattern.
- The area at VA0 to 3 = 8H is illegal for 5×7 dot characters. For 5×8 dot characters, it is allocated to the space at the bottom of the dot matrix character pattern.
- The area at VA0 to 3 = 9H is illegal for 5×7 or 5×8 dot characters. For 5×9 dot characters, it is allocated to the space at the bottom of the dot matrix character pattern.

• 6-dot font width: 6×7 , 6×8 , or 6×9 dots

- The area at HA0 to 2 = 5H is allocated to the space at the right of the dot matrix character pattern.
- The area at VA0 to 3 = 7H, for 6×7 dot characters, is allocated to the space at the bottom of the dot matrix character pattern.
- The area at VA0 to 3 = 8H is illegal for 6×7 dot characters. For 6×8 dot characters, it is allocated to the space at the bottom of the dot matrix character pattern.
- The area at VA0 to 3 = 9H is illegal for 6×7 or 6×8 dot characters. For 6×9 dot characters, it is allocated to the space at the bottom of the dot matrix character pattern.

*20: Example of the “set AC and SC addresses” instruction execution

Assume that a 32 digits \times 2 lines display structure (OZ1 = 1, OZ2 = 0) has been set up with the “set display technique” instruction, and that the following data has been written to DCRAM with the “DCRAM data write” instruction.

Display digit		1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
DCRAM data	First line (DCRAM address (hexadecimal))	A (00)	B (01)	C (02)	D (03)	E (04)	F (05)	G (06)	H (07)	I (08)	J (09)	K (0A)	L (0B)	M (0C)	N (0D)	O (0E)	P (0F)
	Second line (DCRAM address (hexadecimal))	0 (20)	1 (21)	2 (22)	3 (23)	4 (24)	5 (25)	6 (26)	7 (27)	8 (28)	9 (29)	a (2A)	b (2B)	c (2C)	d (2D)	e (2E)	f (2F)

Display digit		17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	32
DCRAM data	First line (DCRAM address (hexadecimal))	Q (10)	R (11)	S (12)	T (13)	U (14)	V (15)	W (16)	X (17)	Y (18)	Z (19)	< (1A)	> (1B)	z (1C)	y (1D)	x (1E)	w (1F)
	Second line (DCRAM address (hexadecimal))	g (30)	h (31)	i (32)	j (33)	k (34)	l (35)	m (36)	n (37)	o (38)	p (39)	q (3A)	r (3B)	s (3C)	t (3D)	u (3E)	v (3F)

- When DA0 to 5 is set to 07H, HA0 to 2 is set to 0H, and VA0 to 3 is set to 0H.

HA0	HA1	HA2	VA0	VA1	VA2	VA3	DA0	DA1	DA2	DA3	DA4	DA5

(5 × 7 dot matrix)

(6 × 7 dot matrix)

- DCRAM data write ... <Specifies the DCRAM address and stores data at that address.>

Code																							
D120	D121	D122	D123	D124	D125	D126	D127	D128	D129	D130	D131	D132	D133	D134	D135	D136	D137	D138	D139	D140	D141	D142	D143
AC0	AC1	AC2	AC3	AC4	AC5	AC6	AC7	DA0	DA1	DA2	DA3	DA4	DA5	X	X	IM1	IM2	X	0	0	1	0	1

X: don't care

DA0 to DA5: DCRAM address

DA0	DA1	DA2	DA3	DA4	DA5
LSB			MSB		
↑					↑
Least significant bit			Most significant bit		

AC0 to AC7: DCRAM data (character code)

AC0	AC1	AC2	AC3	AC4	AC5	AC6	AC7
LSB				MSB			
↑							↑
Least significant bit				Most significant bit			

This instruction writes the 8 bits of data AC0 to AC7 to DCRAM. This data is a character code, and is converted to a 5 × 7, 5 × 8, or 5 × 9 dot matrix display data using CGROM or CGRAM.

IM1 and IM2: Sets the method of writing data to DCRAM

IM1	IM2	DCRAM data write method
0	0	Normal DCRAM data write (Specifies the DCRAM address and writes the DCRAM data.)
1	0	Normal increment mode DCRAM data write (Increments the DCRAM address by +1 each time data is written to DCRAM.)
0	1	Super-increment mode DCRAM data write (Writes 2 to 16 characters of DCRAM data in a single operation.)

*21 • DCRAM data write method when IM1 is 0 and IM2 is 0.

• DCRAM data write method when IM1 is 1 and IM2 is 0.
(Instructions other than the “DCRAM data write” instruction cannot be executed.)

• DCRAM data write method when IM1 is 0 and IM2 is 1.

$t_i = 13.5\mu s \times (\frac{n}{8} - 1)$ ($n = 8m + 16$, m is an integer between 2 and 16 that is the number of characters written as DCRAM data.)

- For example
- When $n = 32$ bits ($m = 2$): $t_i = 40.5 \mu s$ (when $f_{osc} = 300$ kHz)
 - When $n = 80$ bits ($m = 8$): $t_i = 121.5 \mu s$ (when $f_{osc} = 300$ kHz)
 - When $n = 144$ bits ($m = 16$): $t_i = 229.5 \mu s$ (when $f_{osc} = 300$ kHz)

Note that the instruction execution time of $27 \mu s$ and t_i values in μs apply when $f_{osc} = 300$ kHz, and that these times will differ when the oscillator frequency f_{osc} differs.

AD1 to AD80: ADATA display data

In addition to the 5 × 7, 5 × 8, 5 × 9, 6 × 7, 6 × 8, or 6 × 9 dot matrix display data (MDATA), the LC75810E/T also supports an accessory display of 5 or 6 segments (ADATA) at each display digit, and allows arbitrary data to be displayed directly without going through CGROM or CGRAM. The figure below shows the correspondence between that data and the display. When AD_n = 1 (where n is an integer between 1 and 80), the segment corresponding to that data will be turned on.

5-dot font width (5 × 7, 5 × 8, or 5 × 9 dots)

LC75810E/T

6-dot font width (6 × 7, 6 × 8, or 6 × 9 dots)

CD1 to CD45: CGRAM data (5×7 , 5×8 , or 5×9 dot matrix display data)

The bit CDn (where n is an integer between 1 and 45) corresponds to the 5×7 , 5×8 , or 5×9 dot matrix display data. The figure below shows that correspondence. When CDn is 1, the dots which correspond to that data will be turned on.

 CD1 to CD40: 5×8 dot matrix display data
 CD1 to CD45: 5×9 dot matrix display data

LC75810E/T

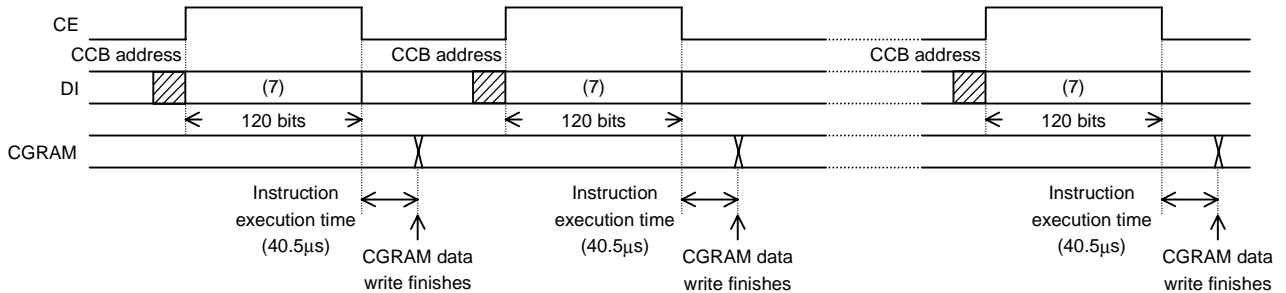

WM: Sets the method of writing data to CGRAM.

WM	CGRAM data write method
0	Normal CGRAM data write (Specifies a CGRAM address and write a CGRAM data.)
1	Double write mode CGRAM data write (Specifies two CGRAM addresses and writes two CGRAM data to those addresses.)

*23: • CGRAM data write method when WM is 0.

• CGRAM data write method when WM is 1.

Note that the instruction execution times of 27 μs and 40.5 μs apply when $f_{osc} = 300 \text{ kHz}$, and that these times will differ when the oscillator frequency f_{osc} differs.

0	1	0	1	$0.64V_{LCD} = V_{LCD} - (0.03V_{LCD} \times 12)$

CTC: Sets the display contrast adjustment circuit state

CTC	Display contrast adjustment circuit state
0	The display contrast adjustment circuit is disabled, and the V_{LCD0} pin level is forced to the V_{LCD} level.
1	The display contrast adjustment circuit operates, and the display contrast is adjusted.

Note that although the display contrast can be adjusted by operating the built-in display contrast adjustment circuit, it is also possible to be adjusted by varying the voltage level on the LCD driver block power supply V_{LCD} pin. However, the level on V_{LCD0} must be greater than or equal to 4.5V.

Notes on the Power On and Power Off Sequences

The following sequences must be observed when power is turned on and off. (See Figure 3.)

- At power on: Logic block power supply (V_{DD}) on → LCD driver block power supply (V_{LCD}) on.
- At power off: LCD driver block power supply (V_{LCD}) off → Logic block power supply (V_{DD}) off.

However, if the logic and LCD driver block use a shared power supply, then the power supplies can be turned on and off at the same time.

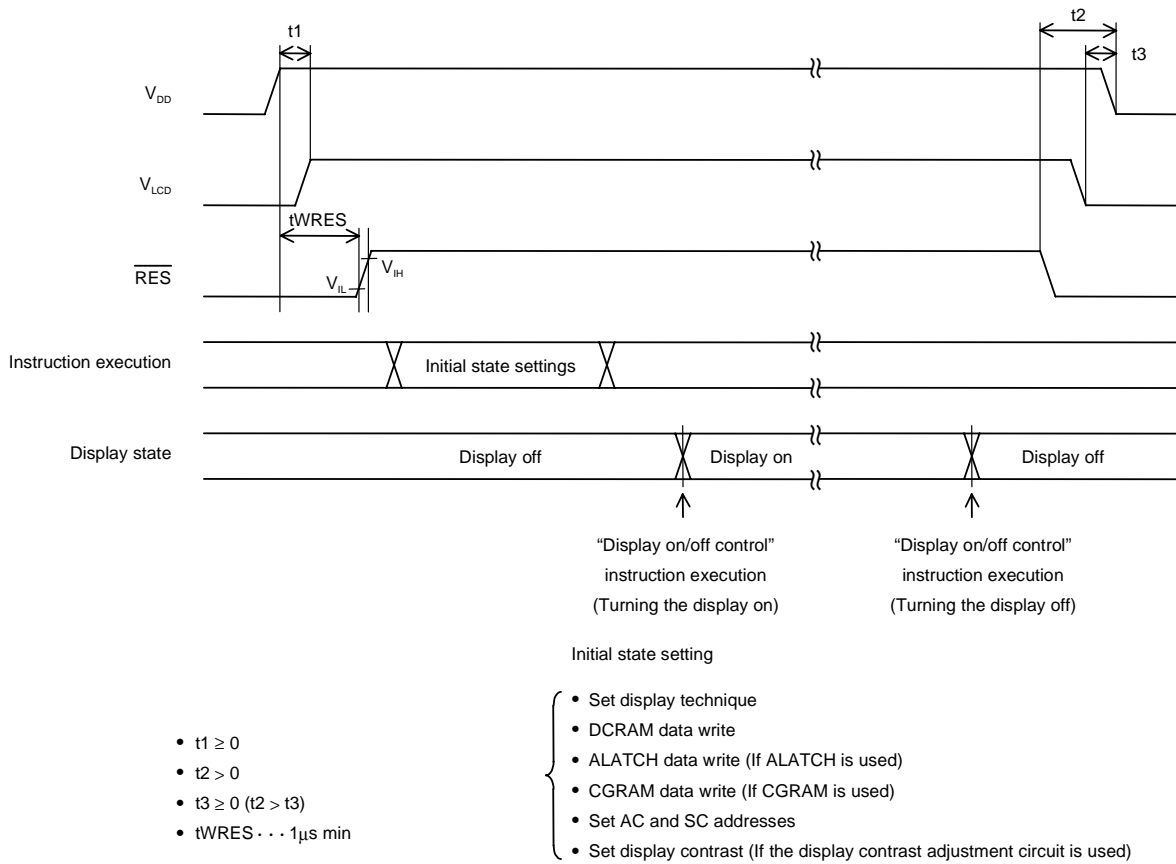

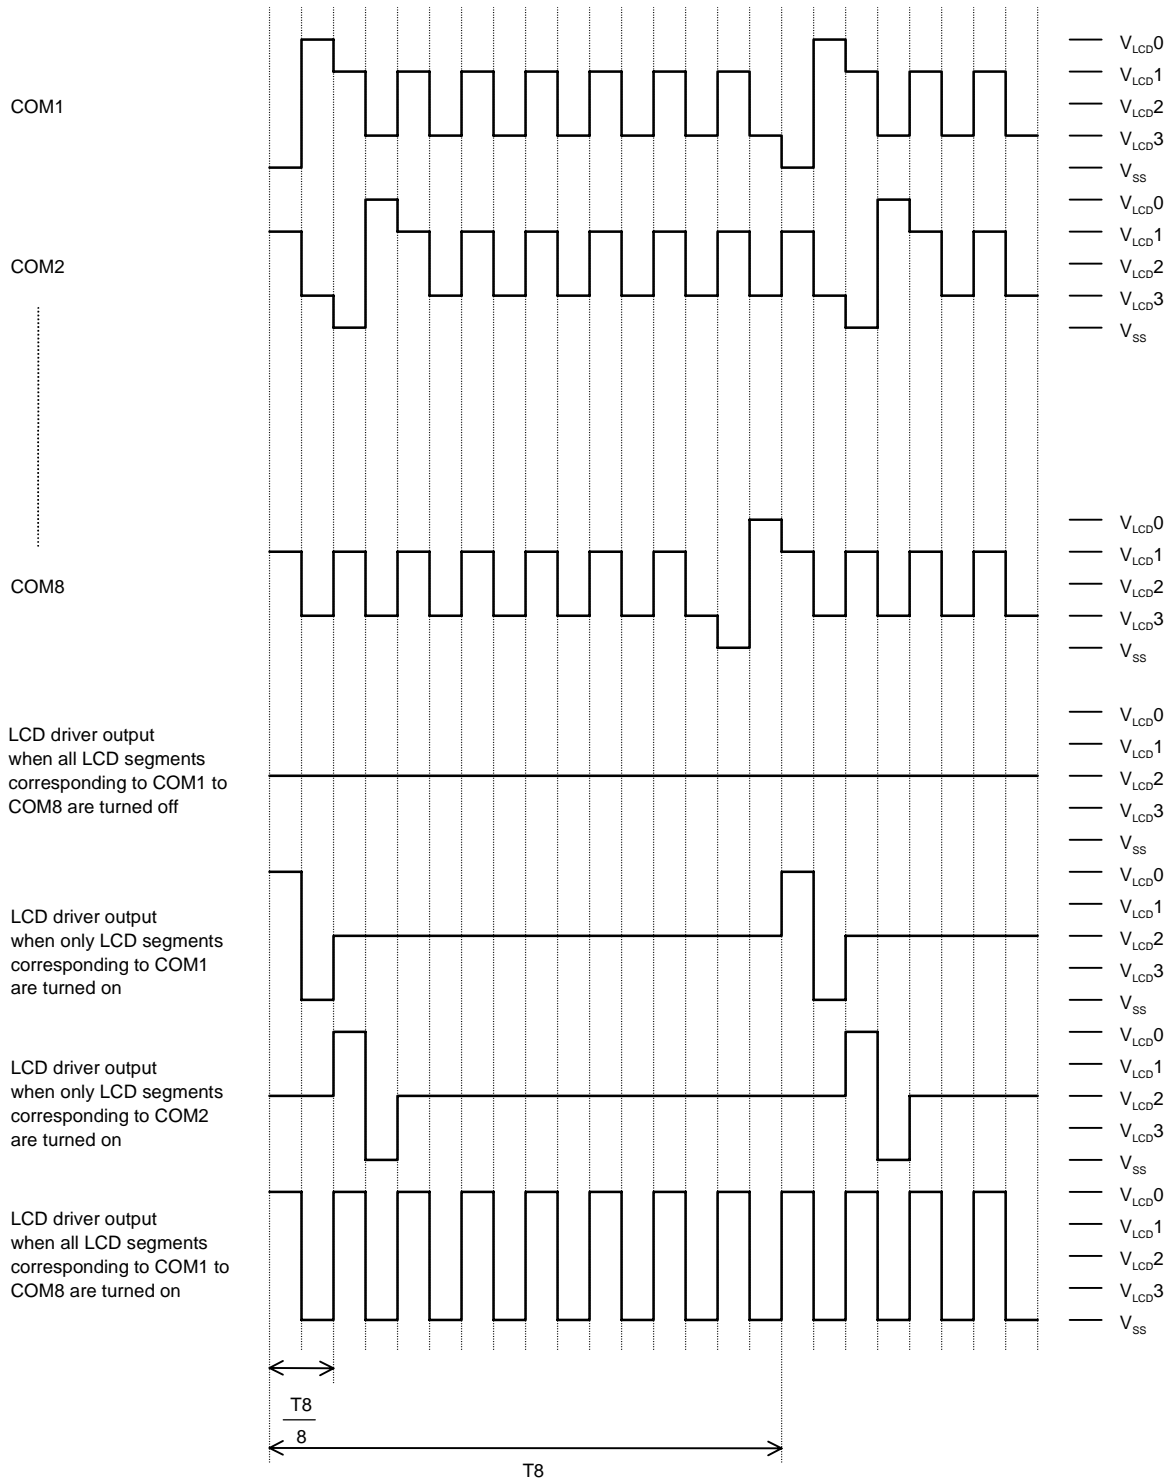

Figure 3

1/8 Duty, 1/4 Bias Drive Technique

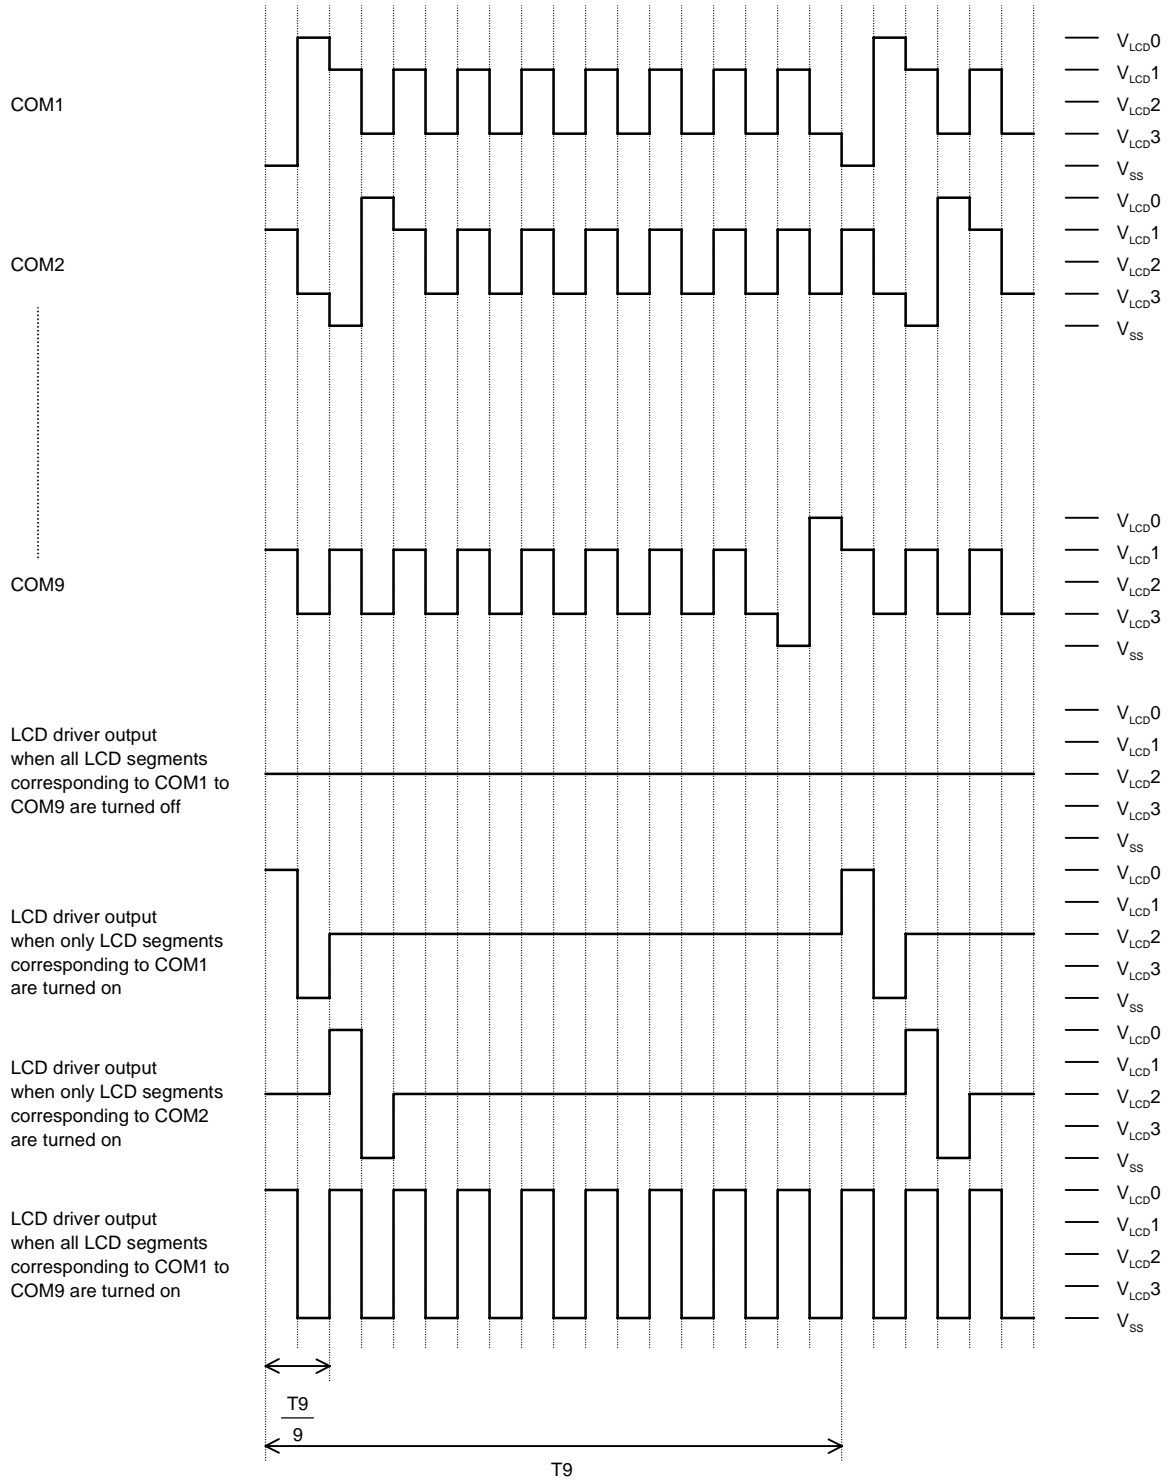

$$T_8 = \frac{1}{f_8}$$

When a "set display technique" instruction with FC = 0 is executed: $f_8 = \frac{f_{osc}}{3072}$

When a "set display technique" instruction with FC = 1 is executed: $f_8 = \frac{f_{osc}}{1536}$

1/9 Duty, 1/4 Bias Drive Technique

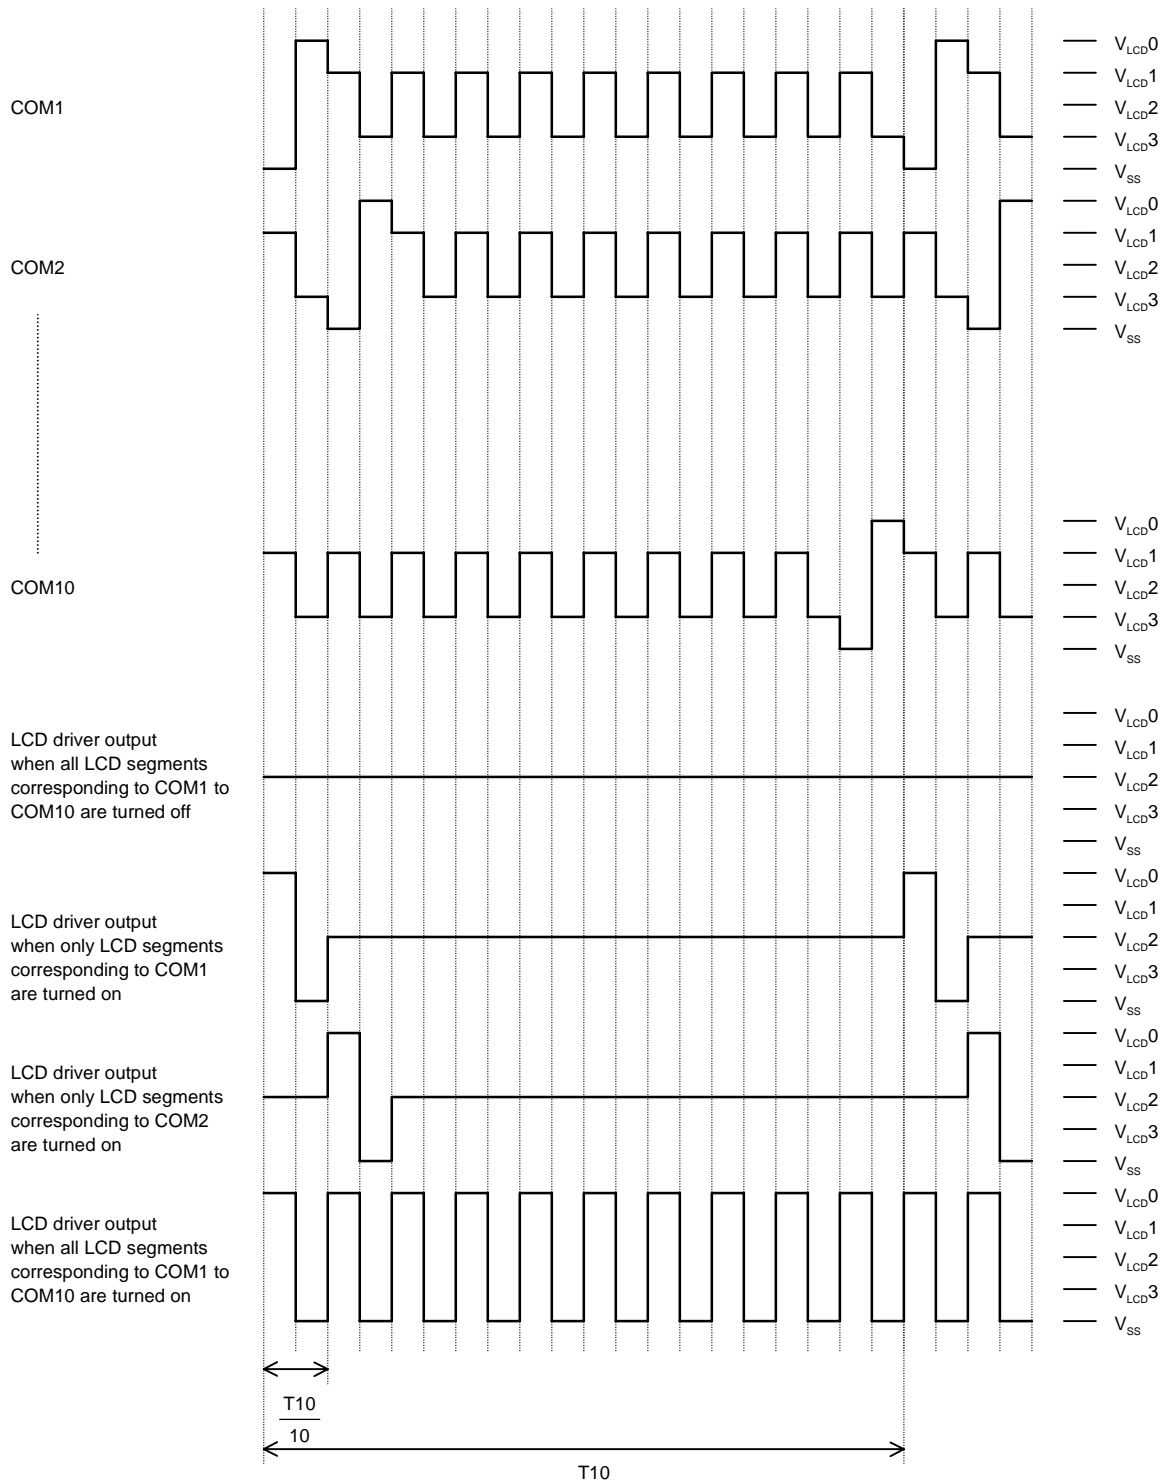

$$T_9 = \frac{1}{f_9}$$

When a "set display technique" instruction with FC = 0 is executed: $f_9 = \frac{f_{osc}}{3456}$

When a "set display technique" instruction with FC = 1 is executed: $f_9 = \frac{f_{osc}}{1728}$

1/10 Duty, 1/4 Bias Drive Technique

$$T_{10} = \frac{1}{f_{10}}$$

When a "set display technique" instruction with FC = 0 is executed: $f_{10} = \frac{f_{osc}}{3840}$

When a "set display technique" instruction with FC = 1 is executed: $f_{10} = \frac{f_{osc}}{1920}$

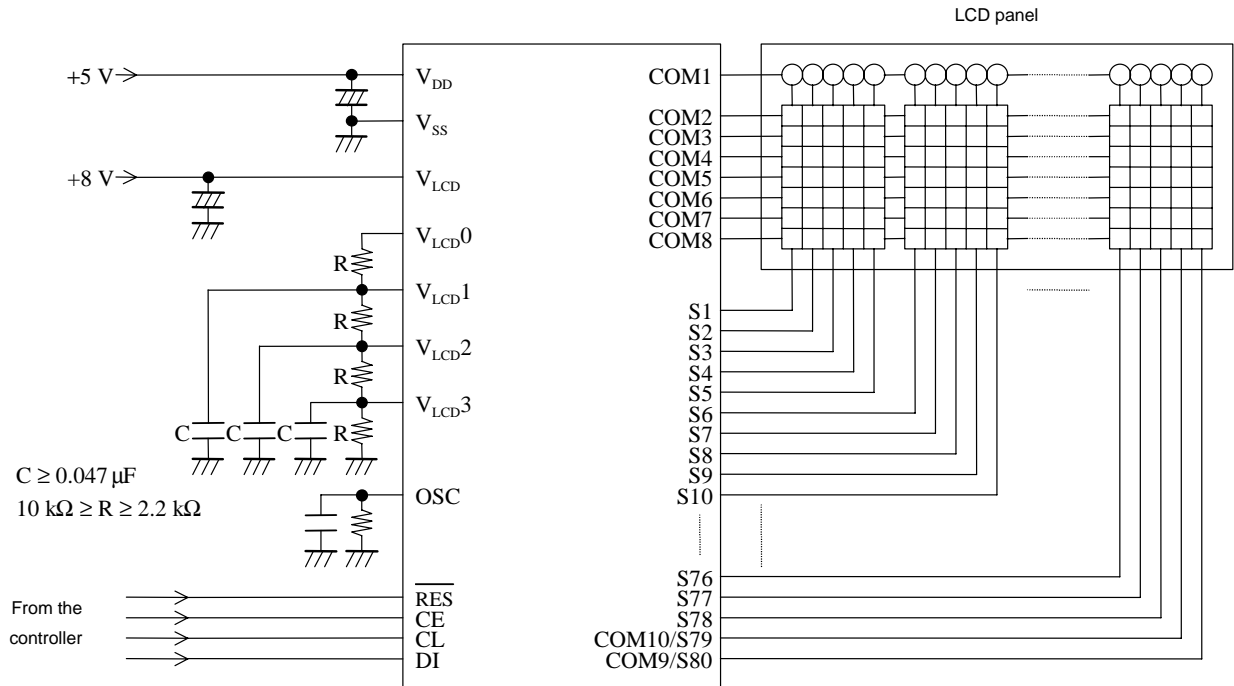

Sample Application Circuit 1

5 × 7 dot matrix, 1/8 duty, 1/4 bias drive (for use with normal panels)

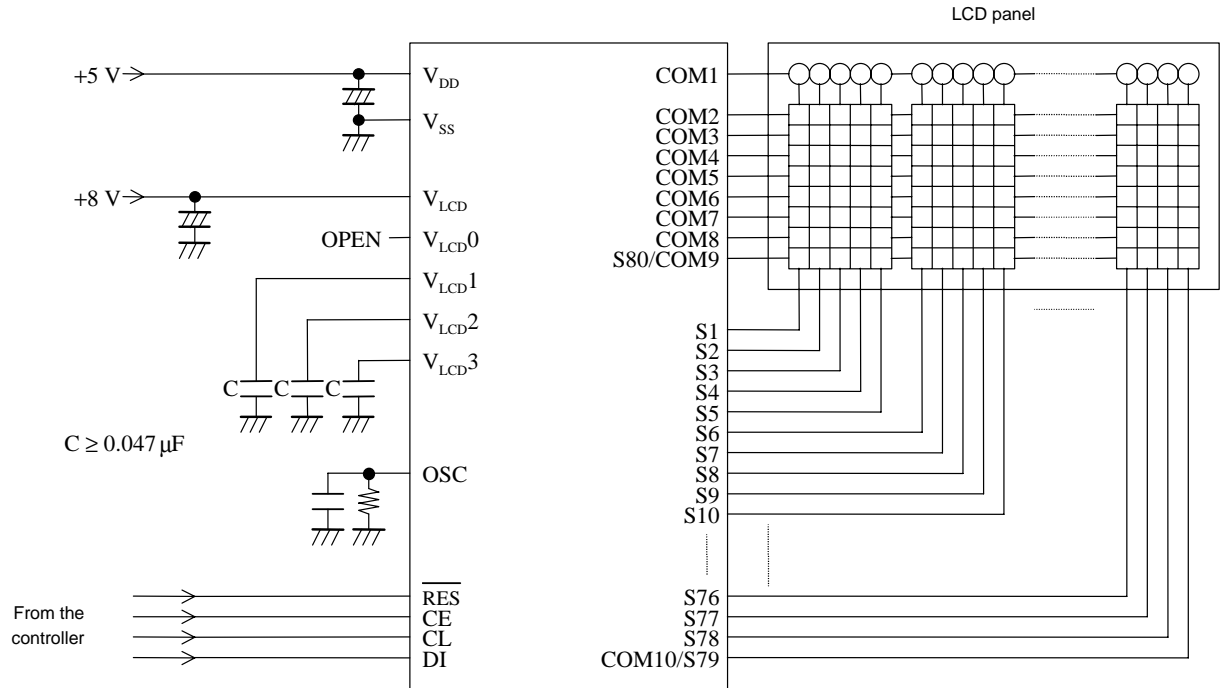

Sample Application Circuit 2

5 × 7 dot matrix, 1/8 duty, 1/4 bias drive (for use with large panels)

Sample Application Circuit 3

5 × 8 dot matrix, 1/9 duty, 1/4 bias drive (for use with normal panels)

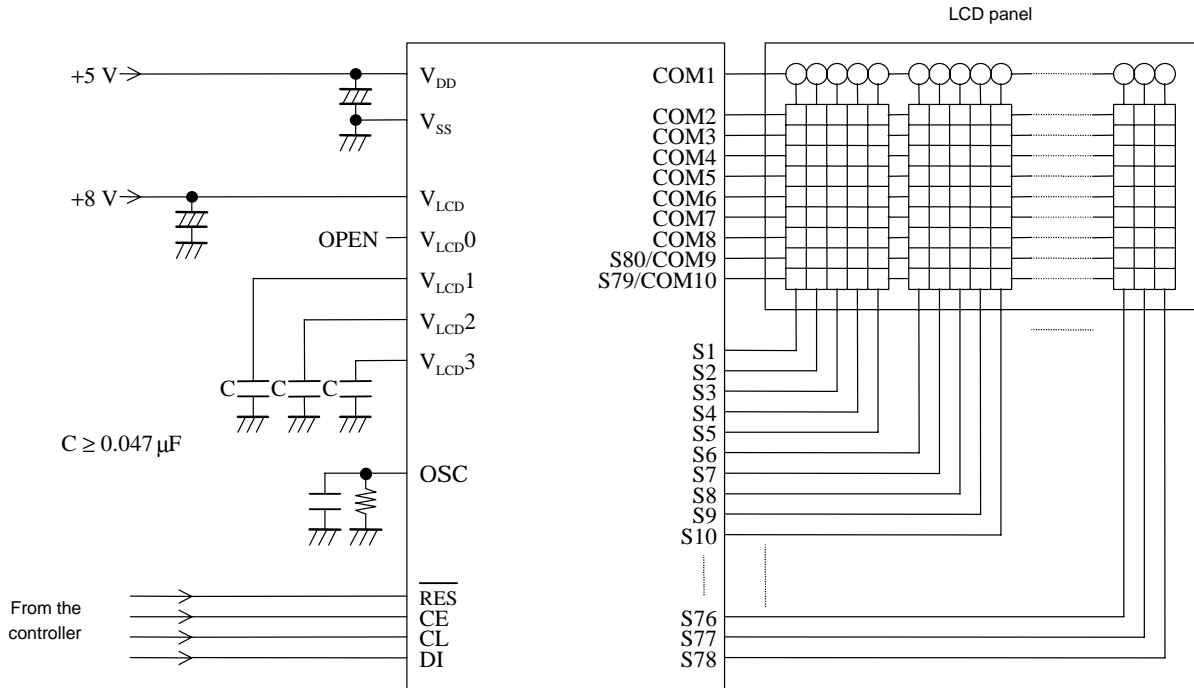

Sample Application Circuit 4

5 × 8 dot matrix, 1/9 duty, 1/4 bias drive (for use with large panels)

Sample Application Circuit 5

5 × 9 dot matrix, 1/10 duty, 1/4 bias drive (for use with normal panels)

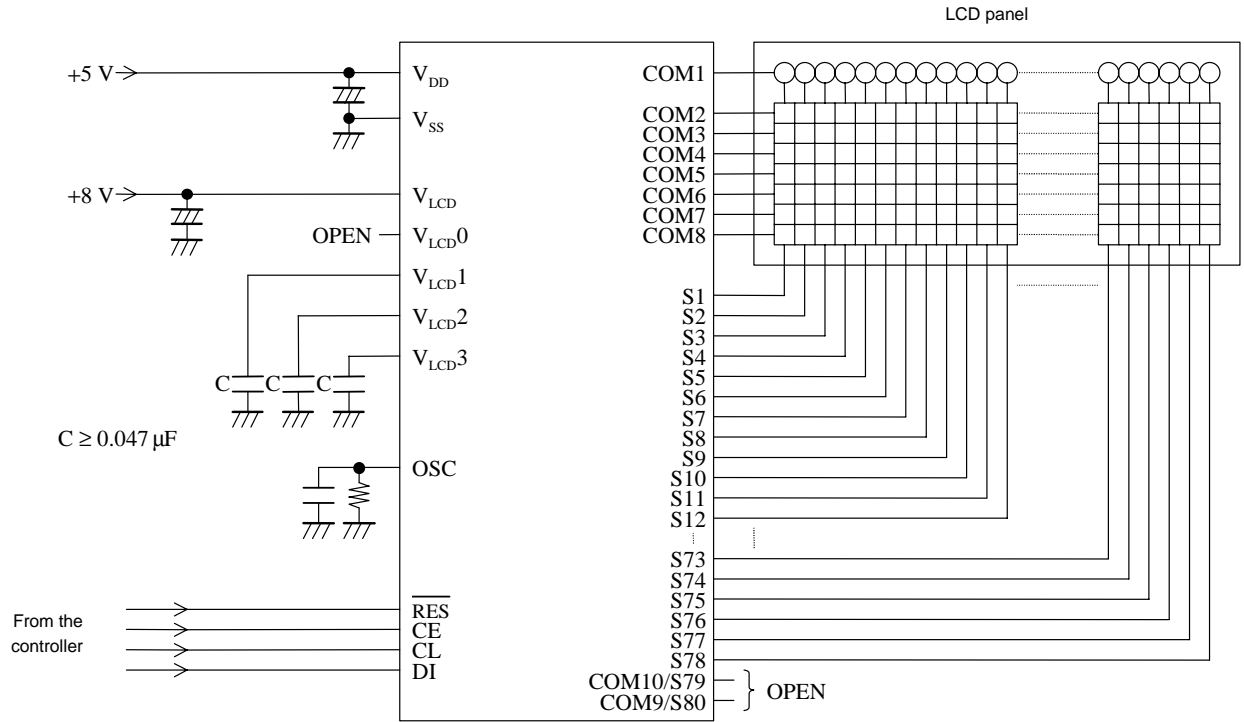

Sample Application Circuit 6

5 × 9 dot matrix, 1/10 duty, 1/4 bias drive (for use with large panels)

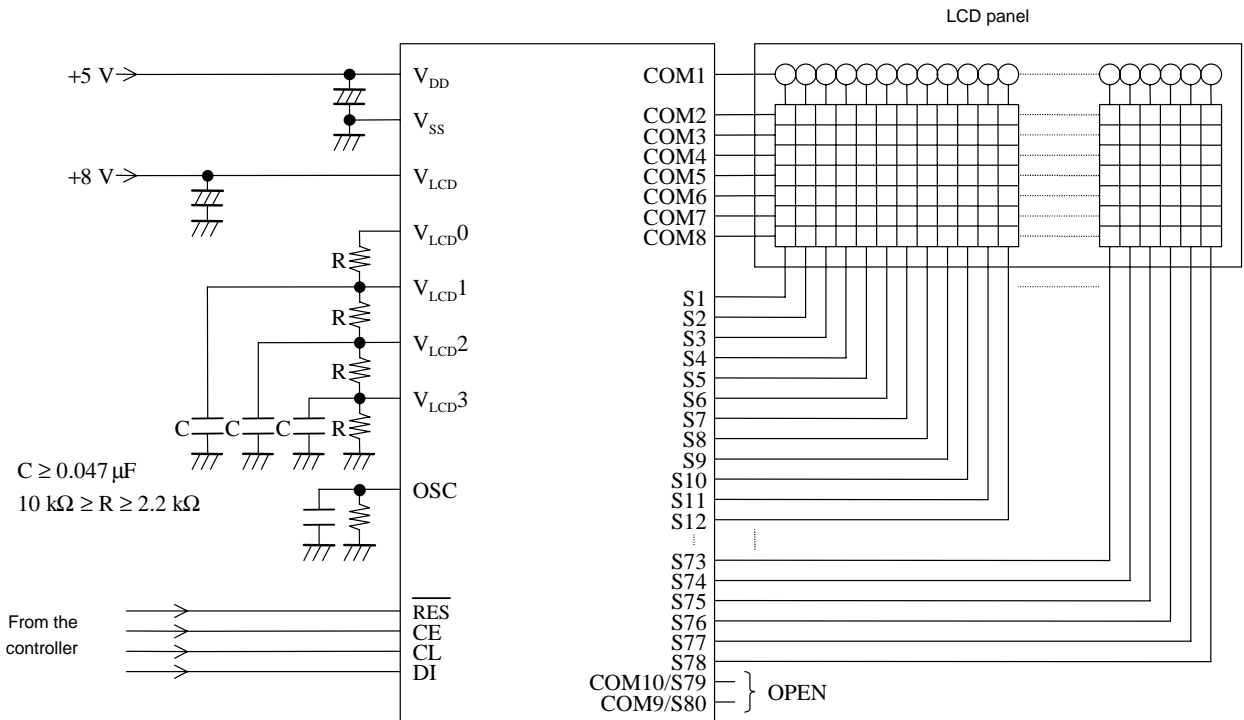

Sample Application Circuit 7

6 × 7 dot matrix, 1/8 duty, 1/4 bias drive (for use with normal panels)

Sample Application Circuit 8

6 × 7 dot matrix, 1/8 duty, 1/4 bias drive (for use with large panels)

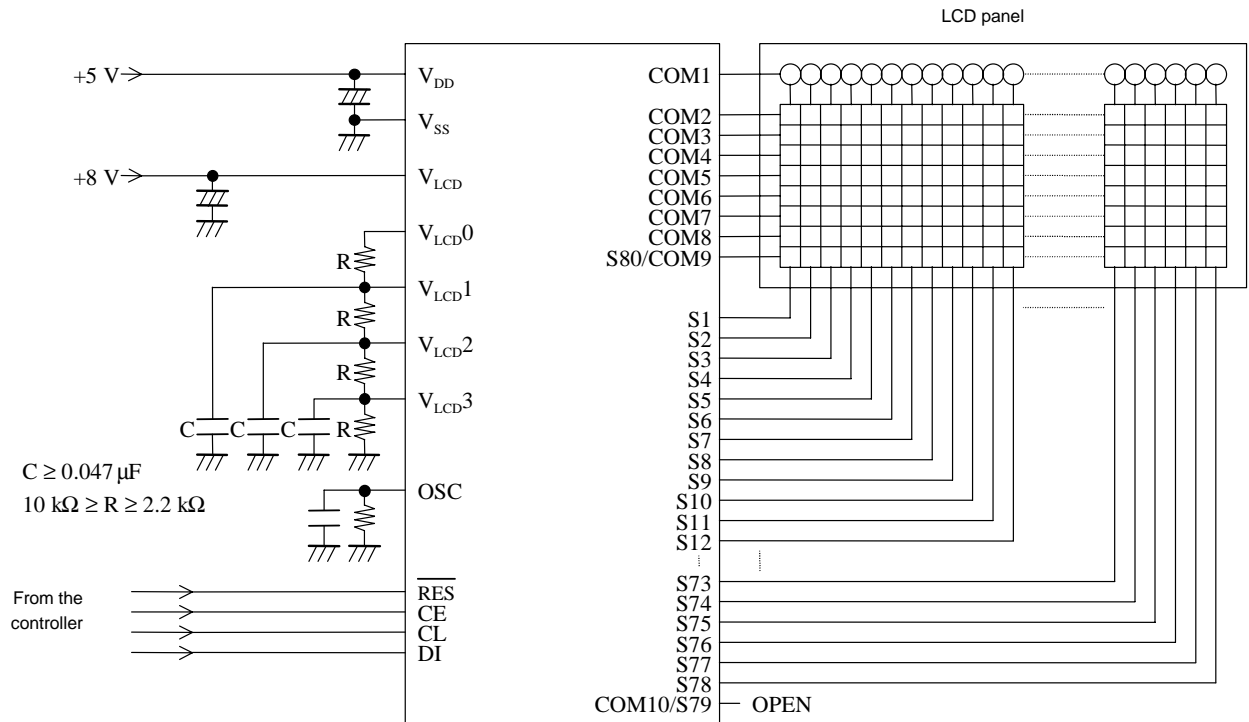

Sample Application Circuit 9

6 × 8 dot matrix, 1/9 duty, 1/4 bias drive (for use with normal panels)

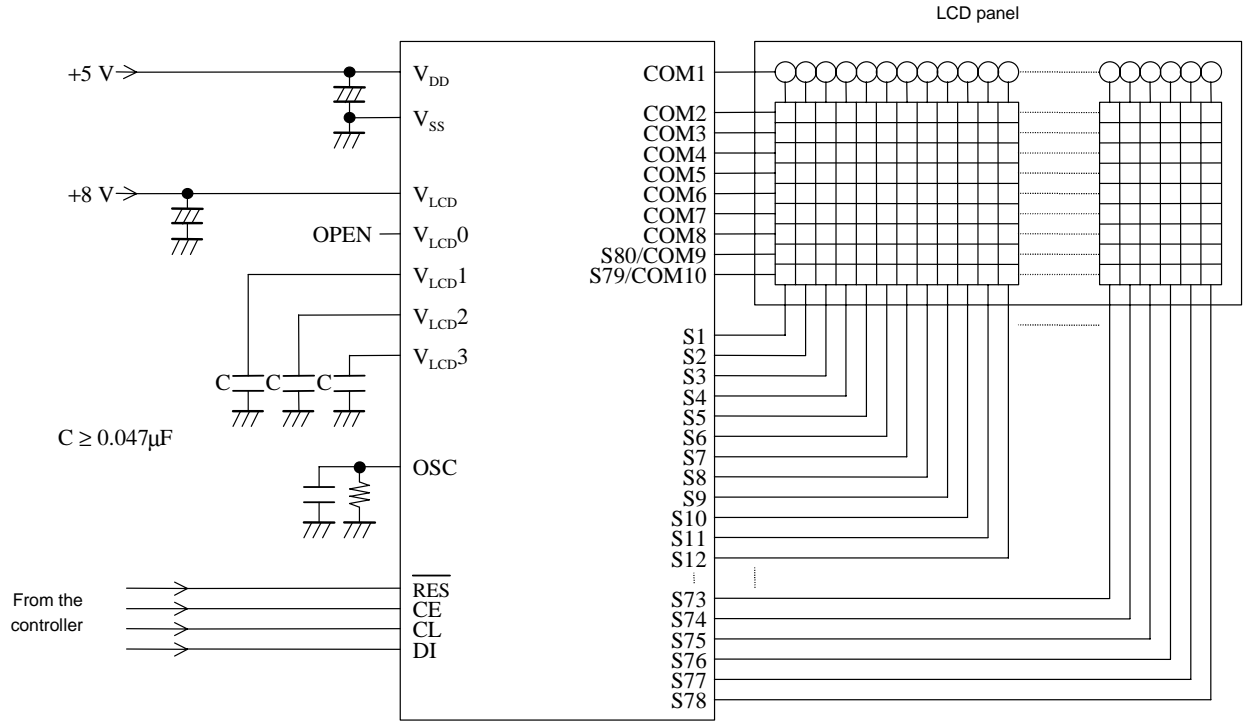

Sample Application Circuit 10

6 × 8 dot matrix, 1/9 duty, 1/4 bias drive (for use with large panels)

Sample Application Circuit 11

6 × 9 dot matrix, 1/10 duty, 1/4 bias drive (for use with normal panels)

Sample Application Circuit 12

6 × 9 dot matrix, 1/10 duty, 1/4 bias drive (for use with large panels)

Sample 1 showing the Correspondence between Instructions and the Display (Using the LC75810-8725 with a 5 × 7 dots, 16 digits × 1 line display)

No.	Instruction (hexadecimal)		MSB D112 to D115 0 D120 to D123 D124 to D127 D28 to D31 D32 to D35 D36 to D39 D40 to D43	Display	Operation
	LSB	Instruction			
1	Power application (initialization with the $\overline{\text{RES}}$ pin)				Initializes the IC. The display is in the off state.
2	Set display technique		1 0 0 8		Sets to the 1/8 duty 1/4 bias display technique, the 32 digits × 2 lines display structure, and the 5-dot font width at each digit.
3	DCRAM data write (normal increment mode)		3 5 0 0 1 A		Writes the display data "S" to DCRAM address 00H.
4	DCRAM data write (normal increment mode)		1 1 4		Writes the display data "A" to DCRAM address 01H.
5	DCRAM data write (normal increment mode)		E 4		Writes the display data "N" to DCRAM address 02H.
6	DCRAM data write (normal increment mode)		9 5		Writes the display data "Y" to DCRAM address 03H.
7	DCRAM data write (normal increment mode)		F 4		Writes the display data "O" to DCRAM address 04H.
8	DCRAM data write (normal increment mode)		0 2		Writes the display data " " to DCRAM address 05H.
9	DCRAM data write (normal increment mode)		9 4		Writes the display data "I" to DCRAM address 06H.
10	DCRAM data write (normal increment mode)		3 4		Writes the display data "C" to DCRAM address 07H.
11	DCRAM data write (normal increment mode)		0 2		Writes the display data " " to DCRAM address 08H.
12	DCRAM data write (normal increment mode)		C 4		Writes the display data "L" to DCRAM address 09H.
13	DCRAM data write (normal increment mode)		3 4		Writes the display data "C" to DCRAM address 0AH.
14	DCRAM data write (normal increment mode)		7 3		Writes the display data "7" to DCRAM address 0BH.
15	DCRAM data write (normal increment mode)		5 3		Writes the display data "5" to DCRAM address 0CH.
16	DCRAM data write (normal increment mode)		8 3		Writes the display data "8" to DCRAM address 0DH.
17	DCRAM data write (normal increment mode)		1 3		Writes the display data "1" to DCRAM address 0EH.

52			3	0	0	0	0	0	0	C		Shifts just the MDATA display three dots to the left.
53			3	0	0	0	0	0	0	C		Shifts just the MDATA display three dots to the left.
54			3	0	0	0	0	0	0	C		Shifts just the MDATA display three dots to the left.
55			3	0	0	0	0	0	0	C		Shifts just the MDATA display three dots to the left.
56			3	0	0	0	0	0	0	C		Shifts just the MDATA display three dots to the left.
57			3	0	0	0	0	0	0	C		Shifts just the MDATA display three dots to the left.
58			3	0	0	0	0	0	0	C		Shifts just the MDATA display three dots to the left.
59			3	0	0	0	0	0	0	C		Shifts just the MDATA display three dots to the left.
60			3	0	0	0	0	0	0	C		Shifts just the MDATA display three dots to the left.
61			3	0	0	0	0	0	0	C		Shifts just the MDATA display three dots to the left.
62			3	0	0	0	0	0	0	C		Shifts just the MDATA display three dots to the left.
63			3	0	0	0	0	0	0	C		Shifts just the MDATA display three dots to the left.
64			3	0	0	0	0	0	0	C		Shifts just the MDATA display three dots to the left.
65			3	0	0	0	0	0	0	C		Shifts just the MDATA display three dots to the left.
66	0	0	0	0	0	0	0	0	0	2		Sets AC to the DCRAM address 00H, SC to the horizontal dot address 0H and the vertical dot address 0H.
67			0	0	2	0	0	0	0	C		Shifts just the MDATA display two dots to the up.
68			0	0	2	0	0	0	0	C		Shifts just the MDATA display two dots to the up.

Display

Notes *26: In sample 2 showing the correspondence between instructions and the display, a 13 digits × 1 line 6 × 7 dot matrix LCD is used, and CGRAM and ALATCH are not used.
 *27: The data format will have the following format if super-increment mode is used for the "DCRAM data write" instructions (numbers 3 to 41) in sample 2 showing the correspondence between instructions and the display.
 Note that the sample below shows 39 characters of DCRAM data being divided into 3 separate "DCRAM data write" instruction executions in the super-increment mode.

No.	Instruction													MSB										
	D24 to D27	D28 to D31	D32 to D35	D36 to D39	D40 to D43	D44 to D47	D48 to D51	D52 to D55	D56 to D59	D60 to D63	D64 to D67	D68 to D71	D72 to D75		D76 to D79	D80 to D83	D84 to D87	D88 to D91	D92 to D95	D96 to D99	D100 to D103	D104 to D107	D108 to D111	
3 to 15	DCRAM data write (super-increment mode)																							
	3	5	1	4	4	E	4	4	9	5	F	4	0	2	C	4	3	4	7	3	5	3	8	3
16 to 28	DCRAM data write (super-increment mode)																							
	0	2	C	4	4	3	4	4	4	4	0	2	4	4	4	2	5	9	4	6	5	4	2	5
29 to 41	DCRAM data write (super-increment mode)																							
	4	4	F	4	4	4	5	0	2	D	4	4	1	4	4	5	2	5	9	4	8	5	0	2

No.	Instruction										MSB	Operation
	D112 to D115	D116 to D119	D120 to D123	D124 to D127	D128 to D131	D132 to D135	D136 to D139	D140 to D143				
3 to 15	DCRAM data write (super-increment mode)										A	Writes the display data "S" "A" "N" "Y" "O" " " " " "L" "C" "7" "5" "8" "1" "0" to DCRAM addresses 00H to 0CH.
16 to 28	1	3	0	3	0	0	2	A			A	Writes the display data " " "L" "C" "D" " " " " "R" " " "Y" "E" "R" " " " " " to DCRAM addresses 0DH to 19H.
29 to 41	0	2	0	2	D	0	2	A			A	Writes the display data "D" "O" "T" " " " "M" "A" "T" "R" " " "X" " " " " " " " to DCRAM addresses 20H to 2CH.

- Specifications of any and all SANYO Semiconductor products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.
- SANYO Semiconductor Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO Semiconductor products (including technical data, services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written permission of SANYO Semiconductor Co., Ltd.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO Semiconductor product that you intend to use.
- Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production. SANYO Semiconductor believes information herein is accurate and reliable, but no guarantees are made or implied regarding its use or any infringements of intellectual property rights or other rights of third parties.

This catalog provides information as of March, 2002. Specifications and information herein are subject to change without notice.
