DESCRIPTION:

The IDT54/74FCT377T is an octal D flip-flop built using an advanced dual metal CMOS technology. The IDT54/74FCT377T has eight edge-triggered, D-type flip-flops with individual D inputs and O outputs. The common buffered Clock (CP) input loads all flip-flops simultaneously when the Clock Enable (\overline{CE}) is low. The register is fully edge-triggered. The state of each D input, one set-up time before the low-to-high clock transition, is transferred to the corresponding flip-flop's O output. The \overline{CE} input must be stable only one set-up time prior to the low-to-high transition for predictable operation.
