

## GE7809

### 3-TERMINAL POSITIVE VOLTAGE REGULATOR

#### Description

The GE7809 series of three-terminal positive regulators are available in the TO-220 package. These regulators can provide local on-card regulation, eliminating the distribution problems associated with single point regulation. Each employs internal current limiting, thermal shut-down and safe operating area protection, making it essentially indestructible. If adequate heat sinking is provided, they can deliver 1A output current. Although designed primarily as fixed voltage regulators, these devices can be used with external components to obtain adjustable voltages and currents.
