

MC2800EVK

Advance Information FLEX™ Paging RF/IF Receiver Board

This document contains the information of a FLEX paging receiver reference prototype. This FLEX paging receiver board is a high performance RF/IF front-end for using in FLEX pager. This board employs Motorola's high frequency

transistors MMBR941 as well as its M-ary FSK FM IF receiver MC2800 as the core. The whole board includes a LNA, an oscillator, a mixer and a FSK IF receiver.

Features:

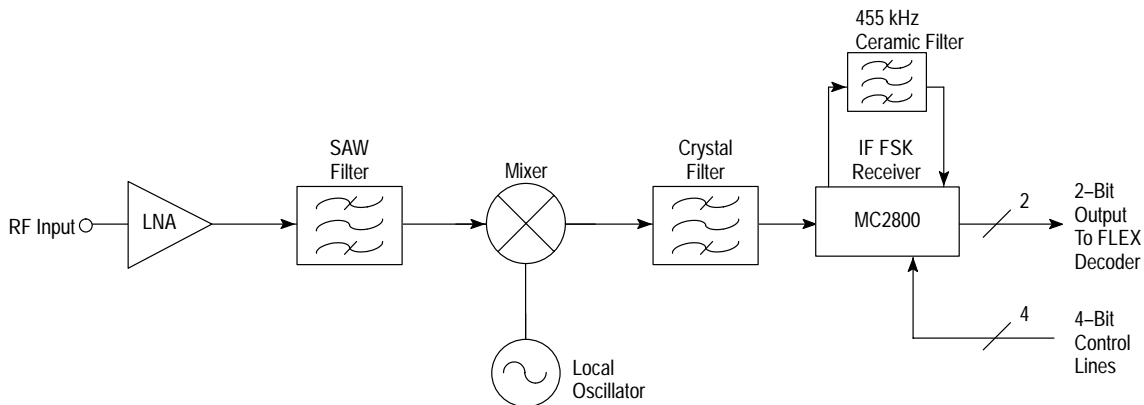

- Input RF Frequency: 284.14 MHz
- Excellent Sensitivity: -124 dBm
- Operating Voltage: $V_{CC} = 1.1$ to 1.7 V
- Total Current Consumption: 3.2 mA @ $V_{CC} = 1.1$ V
- Switchable Bit-Rate Filter to Support All Kinds of FLEX Data Rate
- Separate Interfacing Supply Voltage

RECOMMENDED OPERATING CONDITIONS

Characteristic	Symbol	Min	Typ	Max	Unit
Operating Voltage	V _{CC}	1.1	–	1.7	V
RF Input Frequency		284.135	–	284.145	MHz
FLEX Decoder Interface Voltage	V _{DD-E}	3.0	–	3.3	V

ELECTRICAL CHARACTERISTICS (V_{CC} = 1.1 V, V_{DD-E} = 3.3 V, V_{reg} = 0.960, f_{RF} = 284.140 MHz, unless otherwise noted.)

Characteristic	Conditions	Symbol	Min	Typ	Max	Unit
----------------	------------	--------	-----	-----	-----	------

LOW NOISE AMPLIFIER

Power Gain [Note 1]	@ 284.140 MHz	G _p	–	20.6	–	dB
Input Return Loss [Note 1]		S ₁₁	–	–4.2	–	dB
Output Impedance [Note 1]		Z _{out}	–	173 +j75	–	Ω
Noise Figure [Note 1]		NF	–	2.45	–	dB
Current Consumption	V _{reg} = 0.960 V	I	–	890	–	μA

SAW FILTER

Insertion Loss	Terminating Impedance = 230 Ω		–	1.0	–	dB
----------------	-------------------------------	--	---	-----	---	----

FIRST LOCAL OSCILLATOR

Crystal Frequency		f _C	–	65.681250	–	MHz
Desired Output Frequency	4th Harmonic	f _{LO1}	–	262.74194	–	MHz
Desired Output Power		P _{LO}	–	–23.9	–	dBm
3rd Harmonic Output Power	Referenced to 4th Harmonic	H3	–	–13.5	–	dBc
5th Harmonic Output Power		H5	–	–11.3	–	dBc
Startup Time	EN transits from '0' to '1'		–	<4.5	–	ms
Current Consumption	V _{reg} = 0.960 V	I	–	560	–	μA

LNA + SAW FILTER + MIXER

Conversion Gain [Note 2]	Input @ 284.140 MHz Output @ 21.400 MHz	G _C	–	32.4	–	dB
Noise Figure [Note 2]		NF	–	2.69	–	dB
Output Impedance	@ 21.400 MHz	Z _{out}	–	1.13 – j1.16	–	kΩ
Current Consumption of Mixer	V _{reg} = 0.960 V	I	–	330	–	μA

CRYSTAL FILTER

Insertion Loss	Terminating Impedance = 1.5 kΩ		–	0.9	–	dB
----------------	--------------------------------	--	---	-----	---	----

IF RECEIVER MC2800

Input Impedance	@ 21.400 MHz	Z _{in}	–	770 – j550	–	Ω
Second Local Oscillator Frequency		f _{LO2}	–	20.94506	–	MHz
Startup Time of 2nd LO	EN transits from '0' to '1'		–	<1.0	–	ms

NOTES: 1. Output of the LNA is matched to 230 Ω by inserting a 180 Ω resistor in series with its output port.
 2. Output of the Mixer is matched to 1.5050 kΩ by inserting a 1500 Ω resistor in series with its output port.
 3. The circuit of this test board is the same as the schematic in Figure 2.

OVERALL RECEIVER PERFORMANCE

(a) Phase A Characteristics [Note 3]

Sensitivity 6400/4 Level FSK	@ 284.140 MHz R1 = '0' and R2 = '1'		-	-124	-	dBm
1600/2 Level FSK	@ 284.140 MHz R1 = '1' and R2 = '0'		-	-125	-	
Co-channel Rejection			-	-6.0	-	dB
Adjacent Channel Rejection Low Side High Side			- -	71 58	- -	dB
Image Rejection First IF Second IF	6400/4 Level FSK @ 284.140 MHz R1 = '0' and R2 = '1'		- -	62 65	- -	dB
Intermodulation Rejection Low Side High Side			- -	48 48	- -	dB
Blocking Rejection @ 1.0 MHz @ 5.0 MHz			- -	74 77	- -	dB
Total Current Consumption Power Up	@ $V_{CC} = 1.1$ V EN = '1' and CL = '0'	I_T	-	3.18	-	mA
Power Down	@ $V_{CC} = 1.1$ V EN = '0' and CL = '0'		-	<30	-	μ A

(b) Phase B Characteristics [Note 3]

Sensitivity 6400/4 Level FSK	@ 284.140 MHz R1 = '0' and R2 = '1'		-	-120	-	dBm
1600/2 Level FSK	@ 284.140 MHz R1 = '1' and R2 = '0'		-	-125	-	
Co-channel Rejection			-	-10	-	dB
Adjacent Channel Rejection Low Side High Side			- -	63 55	- -	dB
Image Rejection First IF Second IF	6400/4 Level FSK @ 284.140 MHz R1 = '0' and R2 = '1'		- -	55 57	- -	dB
Intermodulation Rejection Low Side High Side			- -	43 42	- -	dB
Blocking Rejection @ 1.0 MHz @ 5.0 MHz			- -	69 75	- -	dB
Total Current Consumption Power Up	@ $V_{CC} = 1.1$ V EN = '1' and CL = '0'	I_T	-	3.18	-	mA
Power Down	@ $V_{CC} = 1.1$ V EN = '0' and CL = '0'		-	<30	-	μ A

- NOTES:** 1. Output of the LNA is matched to 230 Ω by inserting a 180 Ω resistor in series with its output port.
2. Output of the Mixer is matched to 1.5050 k Ω by inserting a 1500 Ω resistor in series with its output port.
3. The circuit of this test board is the same as the schematic in Figure 2.

APPLICATION NOTES

This FLEX paging receiver board uses Motorola's NPN silicon low-noise high-frequency transistors MMBR941 to construct the functional RF blocks, including a LNA, an oscillator and a mixer. The M-ary FSK IF receiver MC2800 performs the second down-conversion and demodulates the received FSK signal into two digital output bits.

The LNA employs cascode architecture (Q1 and Q2) with its output being matched to 230 Ω , the input impedance of the 284 MHz SAW filter. The input matching network should be changed when an antenna precedes the LNA. Special care must be taken in characterizing the LNA and antenna to achieve a good interface match.

The local oscillator (Q4) uses a Colpitts structure. Its output is bandpass filtered to obtain the 4th harmonic. The values of C12 and C13 can be altered to fine tune the LO frequency. L9 is added in this capacitor network to increase the oscillator gain.

A common emitter circuit (Q3) is used as the mixer with both LO and RF being ac-coupled to its base. Its output is dc-coupled to the 21.4 MHz crystal filter. To minimize the distortion of the downconverted frequency spectrum, the filter output must be matched to MIX_IN of the MC2800.

For the characteristics of the MC2800 as well as its control (EN & CL pins) and bit-rate filter (R1 & R2 pins) setup, please refer to the MC2800 data sheet. It is recommended that a single ceramic filter configuration be used. That is, a 455 kHz 6-pole filter (FILTER3 in Figure 2) is inserted

between the MIX_OUT and IF1_IN, and a 1.0 μ F multi-layer ceramic chip capacitor (C73 in Figure 2) is connected between the IF1_OUT and IF2_IN. Although it is noted in the data sheet of MC2800 that 3.0 to 4.0 dB performance degradation is observed in the single ceramic filter application, this performance degradation does not occur in the overall RF/IF system performance. This is because the high gain and the low NF of the RF front end have effectively reduced the noise contribution of the MC2800 to the overall system.

FDB Interface

This pager board uses an 11-pin surface mount socket to interface with the pager baseband board or the FLEX Development Board (FDB). This interface provides 3 digital output pins (BDOut, D1 & D2), one audio output pin, 4 control pins (EN, CL, R1 & R2) and 3 supply pins (VCC, VDD-E & Gnd). The pin descriptions are summarized in the following table and the footprint of this socket is depicted in Figure 3. In order to provide a default state for these input pins, pull up resistors (R17 & R18) are used at both R1 & R2 input pins whereas a pull down resistor (R19) is connected at the CL input pin.

Note: For general information regarding FLEX products, please contact the local Motorola SPS Sales Office or the web at <http://www.mot-sps.com>

PIN FUNCTION DESCRIPTION

Pin	Symbol	Description
1	Audio Output	Symbol rate filter output.
2	R2	Control bits of the MC2800 bit-rate filter. Default value = '1'.
3	R1	
4	CL	Pre-charge and reset of the MC2800. Default value = '0'.
5	VDD-E	Operating voltage of FLEX decoder used.
6	VCC	Battery supplies of MC2800.
7	EN	MC2800 enable pin.
8	D2	2-Bit digital outputs of the MC2800.
9	D1	
10	BD Out	Low battery detector output.
11	Gnd	Ground pin.

Table 2. SAW Filter Specification

Part Number	SAFC284ME75N [Note]
Nominal Center Frequency, f_0	284.0 MHz
Insertion Loss	
$f_0 - 100$ MHz to $f_0 - 37.5$ MHz	48 dB min
$f_0 \pm 4.0$ MHz	4.5 dB max
$f_0 + 37.5$ MHz to $f_0 + 100$ MHz	40 dB min
Ripple within $f_0 \pm 4.0$ MHz/dB	2.0 max
Nominal Input / Output impedance	230 Ω // - 0.2 pF

NOTE: SAW filter SAFC284ME75N is the product of muRata Manufacturing Co., Ltd. For further enquiry, please refer to the muRata's product catalog.

Table 3. Crystal Filter Specification

Nominal Center Frequency, f_0	21.400000 MHz \pm 1.0 kHz
Number of Pole	2 poles
Pass Band Width	-3.0 dB / \pm 7.5 kHz min
Stop Band Width	-18 dB / \pm 25.0 kHz max
Pass Band Ripple	0.5 dB max
Insertion Loss	1.5 dB max
Nominal Input / Output impedance	1.5 k Ω // 2.0 pF

Table 4. Ceramic Filter Specification

Part Number	CFWC455D [Note]
Nominal Center Frequency, f_0	455 kHz
3.0 dB Bandwidth from f_0	\pm 8.0 kHz
50 dB Bandwidth from f_0	\pm 17.0 kHz
Stop Band Attenuation	
Within $f_0 \pm 18$ to 33 kHz	55 dB min
Within $f_0 \pm 100$ kHz	50 dB min
Spurious within 0.1 to 1.0 MHz	20 dB min
Ripple within $f_0 \pm 7.5$ kHz	2.0 dB max
Nominal Input/Output impedance	1.5 k Ω

NOTE: Ceramic filter CFWC455D is the product of muRata Manufacturing Co., Ltd. For further inquiry, please refer to muRata's product catalog.

Table 5. Quartz Crystal Specification

(a) 65.68125 MHz Quartz Crystal [Note]

Part Number	1U0656812D3035F0Z
Nominal Frequency, f_0	65.68125 MHz
Holder Type	UM-1
Resonance Mode	3rd Overtone
Operating Temperature	-30 to 80°C
Frequency Tolerance @ 25°C	±30 ppm
Load Capacitance	30 pF
Equivalent Series Resistance, ESR	60 Ω max
Shunt Capacitance C_0	7.0 pF
Drive Level	50 μW
Aging	±5.0 ppm/year

(b) 20.94500 MHz Quartz Crystal [Note]

Part Number	1U0209450D30F5D0Z
Nominal Frequency, f_0	20.945 MHz
Holder Type	UM-1
Resonance Mode	Fundamental
Operating Temperature	-30 to 80°C
Frequency Tolerance @ 25°C	±20 ppm
Load Capacitance	30 pF
Equivalent Series Resistance, ESR	30 Ω max
Shunt Capacitance C_0	7.0 pF
Drive Level	0.5 mW
Aging	±5.0 ppm/year

NOTE: The quartz crystals are the products of Hong Kong X'TALS Limited. For further inquiry, please refer to the product catalog of Hong Kong X'TALS Limited or hkxtals@HongKongCrystal.com
