FUNCTIONAL DESCRIPTION

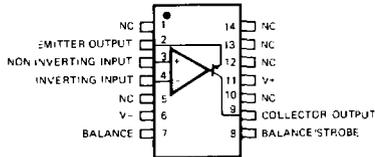

The Am111/211/311 are voltage comparators featuring low input currents, high differential and common mode voltage ranges, wide supply voltage range, and outputs compatible with all bipolar and MOS circuitry. The inputs and outputs can be isolated from system ground, and the output can drive loads referred to ground or either supply. Strobing and offset balancing are available and the outputs can be wire ORed.

Notes: 1. For the Am111/211/311, derate Metal Can package at $6.8\text{mW}/^\circ\text{C}$ for operation at ambient temperatures above 75°C , the Dual In-Line at $9\text{mW}/^\circ\text{C}$ for operation at ambient temperatures above 95°C , and the Flat Packages at $5.4\text{mW}/^\circ\text{C}$ for operation at ambient temperatures above 57°C .

2. Unless otherwise specified, these specifications apply for $V^+ = +15\text{V}$, $V^- = -15\text{V}$, $V_E = -15\text{V}$, and R_L at collector output = $7.5\text{k}\Omega$ to $+15\text{V}$.

3. The offset voltage, offset current and bias current given are the maximum values required to drive the collector output to within 1V of the supplies with a $7.5\text{k}\Omega$ load. These parameters define an error band and take into account the worst case effects of voltage gain and input impedance.

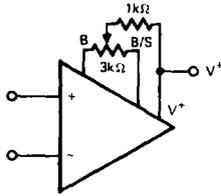

4. The response time specified (see definitions) is for a 100mV input step with 5mV overdrive.
