

To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1st, 2010
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
 - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
 - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
 - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

RENESAS

MOS INTEGRATED CIRCUIT

 μ PD78233, 78234, 78237, 78238

8-BIT SINGLE-CHIP MICROCOMPUTER

Phase-out/Discontinued**DESCRIPTION**

The μ PD78233, 78234, 78237 and 78238 are 78K/II series products. The 78K/II is an 8-bit single-chip microcomputer which can access the memory space of 1M-byte with an external expansion.

Functions are described in detail in the following user's manuals, which should be read when carrying out design work.

μ PD78234 Series User's Manual Hardware Volume : IEU-718

78K/II Series User's Manual Instruction Volume : IEU-754

FEATURES

- High-speed instruction execution (12 MHz operation) : 333 ns (μ PD78234, 78238)
500 ns (μ PD78233, 78237)
- On-chip memory
 - ROM : 16K bytes (μ PD78234)
32K bytes (μ PD78238)
Not incorporated (μ PD78233, 78237)
 - RAM : 640 bytes (μ PD78233, 78234)
1024 bytes (μ PD78237, 78238)
- I/O pin : 64 pins (μ PD78234, 78238)
46 pins (μ PD78233, 78237)
- A/D converter (analog 8 inputs)
- D/A converter (analog 2 outputs)
- PWM output (2 outputs)

APPLICATION

LBP engine, typewriter, HDD, FDD, PPC, FAX, electronic musical instrument, inverter, camera, air-conditioner, etc. ★

The information in this document is subject to change without notice.

ORDERING INFORMATION

Ordering Code	Package	Internal ROM	Internal RAM
μPD78233GC-3B9	80-pin plastic QFP (□14 mm)	None	640
μPD78233GJ-5BG	94-pin plastic QFP (□20 mm)	None	640
μPD78233LQ	84-pin plastic QFJ (□1150 mil)	None	640
μPD78234GC-xxx-3B9	80-pin plastic QFP (□14 mm)	16K	640
μPD78234GJ-xxx-5BG	94-pin plastic QFP (□20 mm)	16K	640
μPD78234LQ-xxx	84-pin plastic QFJ (□1150 mil)	16K	640
μPD78237GC-3B9	80-pin plastic QFP (□14 mm)	None	1024
μPD78237GJ-5BG	94-pin plastic QFP (□20 mm)	None	1024
μPD78237LQ	84-pin plastic QFJ (□1150 mil)	None	1024
μPD78238GC-xxx-3B9	80-pin plastic QFP (□14 mm)	32K	1024
μPD78238GJ-xxx-5BG	94-pin plastic QFP (□20 mm)	32K	1024
μPD78238LQ-xxx	84-pin plastic QFJ (□1150 mil)	32K	1024

Remarks "xxx" is a ROM code number.

QUALITY GRADE

Standard

Please refer to "Quality grade on NEC Semiconductor Devices" (Document number IEI-1209) published by NEC Corporation to know the specification of quality grade on the devices and its recommended applications.

78K/II Product Development

FUNCTION LIST

Item		μPD78233	μPD78234	μPD78237	μPD78238
No. of basic instructions (Mnemonic)		65			
Minimum instruction execution time (at 12 MHz operation)		500 ns	333 ns	500 ns	333 ns
On-chip memory capacity	ROM	None	16K bytes	None	32K bytes
	RAM	640 bytes		1024 bytes	
Memory space		Program memory: 64K bytes, data memory: 1M bytes			
I/O pins	Input	16			
	Output	12			
	Input/output	18	36	18	36
	Total	46	64	46	64
Pins with additional function*	Pin with pull-up resistor	24	42	24	42
	LED direct drive output	8	24	8	24
	Transister direct drive output	8			
Real-time output port		4 bits × 2 or 8 bits × 1			
General register		8 bits × 8 bits × 4 banks (memory mapping)			
Timer/counter		16-bit timer/counter	Timer register × 1 Capture register × 1 Compare register × 2		Pulse output enabled Toggle output PWM/PPG output One-shot pulse output
		8-bit timer/counter 1	Timer register × 1 Capture/compare register × 1 Compare register × 1		Pulse output enabled Real-time output: 4 bits × 2
		8-bit timer/counter 2	Timer register × 1 Capture register × 1 Compare register × 2		Pulse output enabled Toggle output PWM/PPG output
		8-bit timer/counter 3	Timer register × 1 Compare register × 1		
PWM output function		12-bit resolution × 2 channels (PWM frequency: 23.4 kHz)			
Serial interface		UART :1 channel (specialized baud rate generator incorporated) CSI (3-wire serial I/O, SBI):1 channel			
A/D converter		8-bit resolution × 8 channels			
D/A converter		8-bit resolution × 2 channels			
Interrrupt		19 sources (external 7, internal 12) + BRK instruction Priority order of 2 levels (programmable) 2 types of sevicig (vectored interrupt, macro service)			
Instruction set		16-bit operation Multiplication/division (8 bits × 8 bits, 16 bits ÷ 8bits) Bit manipulation BCD adjustment, others			
Package		80-pin plastic QFP (□14 mm) 94-pin plastic QFP (□20 mm) 84-pin plastic QFJ (□1150 mil)			

* Pins with additional function included in the I/O pin.

PIN CONFIGURATION (TOP VIEW)

80-Pin Plastic QFP (□14 mm)

94-Pin Plastic QFP (□20 mm)

84-Pin Plastic QFJ (□1150 mil)

P00 to P07	: Port 0	A8 to A19	: Address Bus
P10 to P17	: Port 1	$\overline{\text{RD}}$	: Read Strobe
P20 to P27	: Port 2	$\overline{\text{WR}}$	: Write Strobe
P30 to P37	: Port 3	$\overline{\text{WAIT}}$	: Wait
P40 to P47	: Port 4	ASTB	: Address Strobe
P50 to P57	: Port 5	$\overline{\text{REFRQ}}$	: Refresh Request
P60 to P67	: Port 6	$\overline{\text{RESET}}$	: Reset
P70 to P77	: Port 7	X1, X2	: Crystal
TO0 to TO3	: Timer Output	MODE	: Mode
CI	: Clock Input	ANI0 to ANI7	: Analog Input
RxD	: Receive Data	ANO0, ANO1	: Analog Output
TxD	: Transmit Data	AV _{REF1} to AV _{REF3}	: Reference Voltage
$\overline{\text{SCK}}$	: Serial Clock	AV _{DD}	: Analog Power Supply
ASCK	: Asynchronous Serial Clock	AV _{SS}	: Analog Ground
SB0	: Serial Bus	V _{DD}	: Power Supply
SI	: Serial Input	V _{SS}	: Ground
SO	: Serial Output	NC	: Non-connection
PWM0, PWM1	: Pulse Width Modulation Output		
NMI	: Non-maskable Interrupt		
INTP0 to INTP5	: Interrupt From Peripherals		
AD0 to AD7	: Address/Data Bus		

SYSTEM CONFIGURATION EXAMPLE (LBP ENGINE)

INTERNAL BLOCK DIAGRAM

Note Internal ROM/RAM capacity varies depending on the product.

* The μ PD78233/78237 cannot use P40 to P47, P50 to P57, P64 and P65 as ports.

1. PIN FUNCTIONS

1.1 PORTS

Pin Name	I/O	Dual-Function Pin	Function	
P00 to P07	Output	——	Port 0 (P0): Can be used as a real-time output port (4 bits × 2) Transistor drive capability.	
P10	Input/ output	PWM0	Port 1 (P1): The input/output specifiable bit-wise. Input mode pins specifiable for on-chip pull-up resistor connection as a batch by software. LED drive capability.	
P11		PWM1		
P12 to P17		——		
P20	Input	NMI	Port 2 (P2): P20 cannot be used as a general-purpose port. (Non-maskable interrupt) However, the input level can be confirmed in the interrupt routine. The connection of the on-chip pull-up resistor can be specified as a 6-bit unit for P22 to P27 by software.	
P21		INTP0		
P22		INTP1		
P23		INTP2/CI		
P24		INTP3		
P25		INTP4/ASCK		
P26		INTP5		
P27		SI		
P30	Input/ output	RxD	Port 3 (P3): The input/output specifiable bit-wise. Input mode pins specifiable for on-chip pull-up resistor connection as a batch by software.	
P31		TxD		
P32		SCK		
P33		SO/SB0		
P34 to P37		TO0 to TO3		
P40 to P47*	Input/ output	AD0 to AD7	Port 4 (P4): The input/output specifiable as an 8-bit unit. The connection of the on-chip pull-up resistor specifiable as a 8-bit unit by software.	LED drive capability
P50 to P57*	Input/ output	A8 to A15	Port 5 (P5): The input/output specifiable bit-wise. Input mode pins specifiable for on-chip pull-up resistor connection as a batch by software.	
P60 to P63	Output	A16 to A19	Port 6 (P6): P64 to P67 enables to specify the input/output bit-wise. The connection of the on-chip pull-up resistor can be specified as a batch for P64 to P67 by software.	
P64*	Input/ output	RD		
P65*		WR		
P66		WAIT		
P67		REFRQ		
P70 to P77	Input	ANI0 to ANI7	Port 7 (P7)	

* The μPD78233/78237 cannot use P40 to P47, P50 to P57, P64 and P65 as ports.

1.2 OTHER PORTS

Pin Name	I/O	Function	Dual-Function Pin
TO0 to TO3	Output	Timer output	P34 to P37
Cl	Input	Count clock input to 8-bit timer/counter 2	P23 /INTP2
RxD	Input	Serial data input (UART)	P30
TxD	Output	Serial data output (UART)	P31
ASCK	Input	Baud rate clock input (UART)	P25/INTP4
SB0	Input/output	Serial data input/output (SBI)	P33/SO
SI	Input	Serial data input (3-wire serial I/O)	P27
SO	Output	Serial data output (3-wire serial I/O)	P33/SB0
$\overline{\text{SCK}}$	Input/output	Serial clock input/output (SBI, 3-wire serial I/O)	P32
NMI	Input	External interrupt request	P20
INTP0			P21
INTP1			P22
INTP2			P23/Cl
INTP3			P24
INTP4			P25/ASCK
INTP5			P26
AD0 to AD7	Input/output	Time multiplexing address/data bus (external memory connection)	P40 to P47*
A8 to A15	Output	Upper address bus (external memory connection)	P50 to P57*
A16 to A19	Output	Upper address when extending address (external memory connection)	P60 to P63
$\overline{\text{RD}}$	Output	Read strobe into external memory	P64*
$\overline{\text{WR}}$	Output	Write strobe into external memory	P65*
$\overline{\text{WAIT}}$	Input	Wait insertion	P66
ASTB	Output	Time multiplexing address (A0 to A7) latch timing output (at external memory accessed)	—
$\overline{\text{REFRQ}}$	Output	Refresh pulse output into external pseudo-static memory	P67
$\overline{\text{RESET}}$	Input	Chip reset	—
X1	Input	Crystal connection for system clock oscillation (capability of clock input to X1)	—
X2	—		
MODE	Input	ROM-less operating specification (external access of the same space as internal ROM). This is used by high level in μPD78233, μPD78237 and by low level in μPD78234, μPD78238.	—
ANI0 to ANI7	Input	Analog voltage input for A/D converter	P70 to P77
ANO0, ANO1	Output	Analog voltage output for D/A converter	—
AVREF1	—	Reference voltage apply for A/D converter	—
AVREF2, AVREF3		Reference voltage apply for D/A converter	
AVDD		Positive power supply for A/D converter	
AVSS		GND for A/D converter	
VDD		Positive power supply	
VSS		GND	
NC		Not connected internally	

* The μPD78233/78237 cannot use P40 to P47, P50 to P57, P64 and P65 as ports.

1.3 PIN I/O CIRCUITS AND RECOMMENDED CONNECTION OF UNUSED PINS

The input/output circuit type of each pin and recommended connection of unused pins are shown in Table 1-1. For the input/output circuit configuration of each type, see Fig. 1-1.

Table 1-1 Input/Output Circuit Type of Each Pin and Recommended Connection of Unused Pins

Pin Name	Input/Output Circuit Type	I/O	Recommended Connection when not Used	
P00 to P07	4	Output	Leave open.	
P10 to P17	5-A	Input/output	Input : Connected to VDD. Output : Leave open.	
P20/NMI	2	Input	Connected to VDD or VSS .	
P21/INTP0	2-A		Connected to VDD .	
P22/INTP1				
P23/INTP2/CI				
P24/INTP3				
P25/INTP4/ASCK				
P26/INTP5				
P27/SI				
P30/RxD	5-A		Input/output	Input : Connected to VDD. Output : Leave open.
P31/TxD	8-A			
P32/SCK				
P33/SB0/SO		10-A		
P34/TO0 to P37/TO3	5-A			
P40/AD0 to P47/AD7				
P50/A8 to P57/A15				
P60/A16 to P63/A19	4	Output	Leave open.	
P64/RD	5-A	Input/output	Input : Connected to VDD. Output : Leave open.	
P65/WR				
P66/WAIT				
P67/REFRQ				
P70/ANI0 to P77/ANI7	9	Input	Connected to VSS .	
ANO0, ANO1	12	Output	Leave open.	
ASTB	4			
RESET	2	Input		
MODE	1			
AVREF1 to AVREF3			Connected to VSS.	
AVss				
AVDD				Connected to VDD .

Remarks The type numbers are standardized by 78K series, therefore they are not always consecutive numbers in each product. (Some circuit is not incorporated.)

Note If the input and output modes are not stable on the pin which has an input/output dual-function, connect to V_{DD} via tens of k Ω resistor. (Especially, if the reset input pin exceeds the low-level input voltage at power-on or in case of change the input/output by software.) ★

Fig. 1-1 Pin Input/Output Circuits

2. INTERNAL BLOCK FUNCTION

2.1 MEMORY SPACE

The μ PD78233, 78234, 78237 and 78238 can access a 1M-byte memory space. Figs. 2-1 and 2-2 show that memory space. The program memory mapping depends on the MODE pin status.

(1) μ PD78233 (MODE = H)

The program memory is mapped into the external memory (64K bytes: 00000H to 0FC7FH). This area is shareable with a data memory.

The data memory has been mapped into the internal RAM (640 bytes: 0FC80H to 0FEFFH). In the 1M-byte extended mode, the external memory (960K bytes: 10000H to FFFFFH) is mapped as the expansion data memory.

(2) μ PD78234 (MODE = L)

The program memory has been mapped onto the internal ROM (16K bytes: 00000H to 03FFFH) and the external memory (48256 bytes: 04000H to 0FC7FH). The external memory is accessed by the external memory expansion mode. The mapping area into the external memory is shareable with the data memory.

The data memory has been mapped into the internal RAM (640 bytes: 0FC80H to 0FEFFH). In the 1M-byte expansion mode, the external memory (960K bytes: 10000H to FFFFFH) is mapped as a expansion data memory.

(3) μ PD78237 (MODE = H)

The program memory is mapped onto the external memory (64256 bytes: 00000H to 0FAFFH). This area is shareable with a data memory.

The data memory has been mapped onto the internal RAM (1024 bytes: 0FB00H to 0FEFFH). In the 1M-byte extended mode, the external memory (960K bytes: 10000H to FFFFFH) is mapped as an expansion data memory.

(4) μ PD78238 (MODE = L)

The program memory has been mapped onto the internal ROM (32K bytes: 00000H to 07FFFH) and the external memory (31488 bytes: 08000H to 0FAFFH). The external memory is accessed by the external memory expansion mode. The mapping area into the external memory is shareable with the data memory.

The data memory has been mapped onto the internal RAM (1024 bytes: 0FB00H to 0FEFFH). In the 1M-byte extended mode, the external memory (960K bytes: 10000H to FFFFFH) is mapped as an expansion data memory.

[illegible]

Shaded area denotes internal memory.

* 1. Accessed by 1M-byte extended mode.

2. Accessed by external memory expansion mode.

3. μ PD78233 only when $\text{MODE} = \text{H}$

Fig. 2-2 μPD78237/78238 Memory Map

Shaded area denotes internal memory.

- * 1. Accessed by 1M-byte extended mode.
- * 2. Accessed by external memory expansion mode.
- * 3. μPD78237 only when MODE = H

2.2 PORT

The μ PD78233, 78234, 78237 and 78238 are equipped with ports as Fig. 2-3, operable for various controls. The function of each port describes Table 2-1. The port 1 to port 6 can be specified to use the internal pull-up resistor by software at input.

Fig. 2-3 Port Configuration

* The μ PD78233/78237 cannot use P40 to P47, P50 to P57, P64 and P65 as ports.

Table 2-1 Port Function

Name	Pin Name	Function	Designation of Software Pull-Up
Port 0	P00 to P07	Outputs or high-impedance specifiable as an 8-bit unit. Also operable as 4-bit real-time output (P00 to P03, P04 to P07). Transistor drive capability.	_____
Port 1	P10 to P17	Input or output specifiable bit-wise. LED drive capability.	Input mode pins specifiable as a batch
Port 2	P20 to P27	Input port	6-bit unit (P22 to P27)
Port 3	P30 to P37	Input or output specifiable bit-wise.	Input mode pins specifiable as a batch
Port 4*	P40 to P47	Input or output specifiable as an 8-bit unit. LED drive capability.	8-bit unit
Port 5*	P50 to P57	Input or output specifiable bit-wise. LED drive capability.	Input mode pins specifiable as a batch
Port 6*	P60 to P63	Output port	_____
	P64 to P67	Input or output specifiable bit-wise.	Input mode pins specifiable as a batch
Port 7	P70 to P77	Input port	_____

* The μPD78233/78237 cannot use P40 to P47, P50 to P57, P64 and P65 as ports.

2.3 REAL-TIME OUTPUT PORT

The real-time output port outputs the data stored in the buffer in synchronization with a timer match interrupt or external interrupt. Therefore, a pulse output without jitter can be acquired.

Accordingly, this is suitable for the application (open loop control of a stepping motor etc.) which outputs any pattern at any interval.

As Fig. 2-4, the port 0 and buffer register are the core of the configuration.

Fig. 2-4 Real-Time Output Port Block Diagram

2.4 TIMER/COUNTER UNIT

The μ PD78233, 78234, 78237 and 78238 incorporate one channel of a 16-bit timer/ counter unit and 3 channels of an 8-bit timer/counter unit.

Table 2-2 Types and Functions for Timer/Counter

Unit Type & Function		16-Bit Timer/ Counter	8-Bit Timer/ Counter 1	8-Bit Timer/ Counter 2	8-Bit Timer/ Counter 3
Type	Interval timer	2ch	2ch	2ch	1ch
	External event counter	—	—	○	—
	One-shot timer	—	—	○	—
Function	Timer output	2ch	—	2ch	—
	Toggle output	○	—	○	—
	PWM/PPG output	○	—	○	—
	One-shot pulse output	○	—	—	—
	Real-time output	—	○	—	—
	Pulse amplitude measurement	○	○	○	—
	Number of interrupt requests	2	2	2	1
	Clock source of serial interface	—	—	—	○

As 7 interrupt requests are supported in total, this functions as the timer of the 7 channels.

OVF : Overflow Flag

2.5 PWM OUTPUT (PWM0, PWM1)

The μ PD78233, 78234, 78237 and 78238 have an on-chip 12-bit resolution PWM (Pulse Width Modulation) with 23.4 kHz repeat frequency ($f_{CLK} = 6$ MHz) output circuit for two channels. The active level of these channels can be selected independently as high or low level. This output is perfect for DC motor speed control.

Fig. 2-6 PWM Output Unit Block Diagram (n = 0, 1)

2.6 A/D CONVERTER

An analog/digital (A/D) converter with 8 multiplexed analog inputs (ANI0 to ANI7) is incorporated.

The conversion is a successive approximation and the conversion result is stored in the 8-bit A/D conversion result register (ADCR). Therefore, the conversion can be executed at high speed and accuracy (converting time: approximately 20 μ s at 12 MHz operation).

This prepares the following modes to start the A/D converting operation.

- Hardware start: Starts the conversion with a trigger input (INTP5).
- Software start : Starts the conversion by setting a bit of A/D converter mode register (ADM).

Also, the following modes are prepared for the operation after started.

- Scan mode : Selects analog inputs one after another and acquires the converted data from all pins.
- Select mode : Fixes analog inputs to one pin and acquires the continuous conversion value.

When stopping the above modes and the converting operation, all of them are specified by ADM.

The interrupt request (INTAD) occurs when the converted result is sent to ADCR (except for software start select mode). Therefore, by a macro service, the converted values can be sent into the memory continuously.

Table 2-3 INTAD Generation Mode

	Scan Mode	Select Mode
Hardware start	○	○
Software start	○	—

Fig. 2-7 A/D Converter Block Diagram

2.7 D/A CONVERTER

Two 8-bit resolution voltage output type digital/analog (D/A) converters are incorporated.

The conversion method is resistance string. The value to be output is written in 8-bit D/A conversion value setting register DACSn and the analog value is output to the ANOn pin. The voltage applied to the AVREF2 pin and AVREF3 pin determines the output voltage range.

Since the output impedance is high, a current cannot be taken from the output. When the load impedance is low, use by inserting a buffer amp between the output and the load.

The ANOn pin becomes high impedance during the period the $\overline{\text{RESET}}$ signal is low level. After reset is cleared, the DACSn register becomes 0.

Fig. 2-8 D/A Converter Block Diagram (n = 0, 1)

2.8 SERIAL INTERFACE

The μ PD78233, 78234, 78237 and 78238 are equipped with 2 independent channels for serial interfaces.

- Asynchronous serial interface (UART)
- Clocked serial interface
 - 3-wire serial I/O
 - Serial bus interface (SBI)

This enables both a communication with the external system and a local communication in the system simultaneously (see Fig. 2-9).

Fig. 2-9 Example of Serial Interface

(a) UART + SBI

(b) UART + 3-wire serial I/O

* Handshake line

2.8.1 Asynchronous Serial Interface

A UART (Universal Asynchronous Receiver Transmitter) has been incorporated as an asynchronous serial interface. This is the method to transmit the one byte data following the start bit.

As UART dedicated baud rate generator is incorporated, communications are possible with a wide range of any baud rate.

Also, the baud rate can be defined by dividing the input clock for the ASCK pin.

Moreover, a baud rate can be generated with 8-bit timer/ counter 3.

If the UART dedicated baud rate generator is used, the baud rate (31.25 kbps) of the MIDI specification can be acquired.

Fig. 2-10 Asynchronous Serial Interface Block Diagram

f_{CLK} : Internal system clock frequency (system clock frequency / 2)

3. INTERNAL/EXTERNAL CONTROL FUNCTION

3.1 INTERRUPT

The interrupt request servicing can be selected from 2 service modes in the following table.

Table 3-1 Interrupt Request Servicing

Service Mode	Servicing Subject	Service	PC, PSW Contents
Vectored interrupt	Software	Branches to service routine, and executes (any service contents)	With save and return
Macro service	Firmware	Data transmission etc. between memory and I/O (fixed service contents)	Hold

3.1.1 Interrupt Source

The interrupt source includes the 19 types and a BRK instruction execution as shown in Table 3-2.

The priority of the interrupt servicing can be set to 2 levels (high and low priority levels). Therefore, it can separate the levels of the nest control which the interrupt is in progress and the interrupt request which occurs simultaneously (see Figs. 3-1, 3-2). But the nesting advances certainly in the macro service (not held).

The default priority is the priority level (fixed) to service the interrupt requests which occur at the same level simultaneously (see Fig. 3-2).

Table 3-2 Interrupt Source

Type	Default Priority	Source		Internal/ External	Macro Service		
		Name	Trigger				
Software	—	BRK	Instruction execution	—	—		
Non-maskable		NMI	Pin input edge detection	External		○	
Maskable	0 (highest)	INTP0	Pin input edge detection (TM1 capture trigger)				
	1	INTP1	Pin input edge detection (TM2 capture trigger)				
	2	INTP2	Pin input edge detection (TM2 event counter input)				
	3	INTP3	Pin input edge detection (TM0 capture trigger)				
	4	INTC00	TM0 to CR00 match signal generation				
	5	INTC01	TM0 to CR01 match signal generation				
	6	INTC10	TM1 to CR10 match signal generation				
	7	INTC11	TM1 to CR11 match signal generation				
	8	INTC21	TM2 to CR21 match signal generation				
	9	INTP4	Pin input edge detection		External		
		INTC30	TM3 to CR30 match signal generation		Internal		
	10	INTP5	Pin input edge detection		External		
		INTAD	A/D converter conversion termination (transfer to ADCR)		Internal		
	11	INTC20	TM2 to CR20 match signal generation				
	12	INTSER	ASI receive error generation				—
	13	INTSR	ASI receive termination				○
14	INTST	ASI transmit termination					
15 (lowest)	INTCSI	CSI transfer termination					

TM0 : 16-bit timer

TM1 to TM3 : 8-bit timer

ASI : Asynchronous serial interface

CSI : Clocked serial interface

Fig. 3-1 Servicing Example for Another Interrupt Request Occurrence while an Interrupt Servicing

Fig. 3-2 Servicing Example for Simultaneous Occurred Interrupt Request

3.1.2 Vectored Interrupt

The memory contents of the vector table address, which corresponds to the interrupt source, is branched into the processing routine as a destination address.

As the CPU executes the interrupt servicing, the following operations occur.

- When branch: Saving the CPU status (PC, PSW contents) to the stack.
- When return : Returning the CPU status (PC, PSW contents) from the stack.

The RETI instruction executes returning to the main routine from the processing routine.

Table 3-3 Vector Table Address

Interrupt Source	Vector Table Address	Interrupt Source	Vector Table Address
BRK	003EH	INTC21	001CH
NMI	0002H	INTP4	000EH
INTP0	0006H	INTC30	
INTP1	0008H	INTP5	0010H
INTP2	000AH	INTAD	
INTP3	000CH	INTC20	0012H
INTC00	0014H	INTSER	0020H
INTC01	0016H	INTSR	0022H
INTC10	0018H	INTST	0024H
INTC11	001AH	INTCSI	0026H

3.1.3 Macro Service

This is a function to transfer the data between the memory special functional registers (SFR) without CPU operation. The macro service controller accesses the memory and SFR during the same transfer cycle, and transfers directly without data collection.

The high-speed data transfer is enabled because no data is saved, returned nor fetched.

Fig. 3-3 Macro Service

3.1.4 Macro Service Application Example

(1) Transmit operation of serial interface

Whenever the macro service request INTST is generated, the next send data is transferred to TXS from the memory. When the data n (last byte) is transferred to TXS (The transmit data storage buffer becomes empty.), a vectored interrupt request INTST is generated.

(2) Receive operation of serial interface

Whenever the macro service request INTSR is generated, the receive data is transferred to the memory from RXB. When the data n (last byte) is transferred to the memory (The receive data storage buffer becomes empty.), the vectored interrupt request INTSR is generated.

(3) Real-time output port

The INTC10 and INTC11 become output triggers of the real-time output port. In the macro service to them, the next output pattern and interval can be set simultaneously. Therefore, the INTC10 and INTC11 can control 2 system stepping motor independently. Also, it can be applied to control a PWM or DC motor, etc.

Whenever the macro service request INTC10 is generated, the pattern and timing are transferred to POL and CR10 respectively. When the contents of the TM1 match with the contents of the CR10, the next INTC10 is generated and the contents of the POL is sent to the output latch. If T_n (last byte) is sent to CR10, a vectored interrupt request INTC10 is generated.

The same operation is available for INTC11 (different point: $CR10 \rightarrow CR11$, $POL \rightarrow P0H$, $P00$ to $P03 \rightarrow P04$ to $P07$).

3.2 LOCAL BUS INTERFACE

A memory and an I/O (memory mapped I/O) can be connected externally and the 1M-byte memory space is supported (see Figs. 2-1, 2-2).

Fig. 3-4 Local Bus Interface Example

3.2.1 Memory Expansion

The following modes have been prepared as a memory expansion function.

- External memory expansion mode:
Expands the program memory and data memory to 48256 bytes externally. But this area can be used unconditionally under the ROM-less mode (MODE=H).
- 1M-byte expansion mode:
Expands the data memory by 960K bytes and become a 1M-byte memory space.

3.2.2 Programmable Wait

A wait can be independently inserted to the memory mapped on both a normal address (μ PD78233, 78234: 00000H to 0FC7FH, μ PD78237, 78238: 00000H to 0FAFFH) and an extended address (10000H to FFFFFH). Therefore, the efficiency of the entire system is not decreased.

3.2.3 Pseudo-Static RAM Refresh Function

The refresh operations are as follows.

- Pulse refresh:
Outputs the refresh pulse to $\overline{\text{REFRQ}}$ pin in synchronization with a bus cycle.
- Power-down self refresh:
Outputs a low-level to the $\overline{\text{REFRQ}}$ pin in the standby mode and holds the contents of pseudo-static RAM.

3.3 STANDBY

This is a function to reduce the power consumption of the chip. The following modes have been prepared.

- HALT mode: Stops the operation clock of the CPU. The average power consumption is reduced by the normal operation and the intermittent operation during normal operations.
- STOP mode: Stops the oscillator. This stops all operation in the chip and makes the minute power consumption status only with leakage current.

These modes are programmable.

Also, the macro service is started from the HALT mode.

Fig. 3-5 Standby Status Flow

- * 1. In case a vectored interrupt request is a low priority level (status to disable interrupt of a low priority sequence under the HALT setting).
2. In case a vectored interrupt request is a high priority level or the status to enable interrupt of a low priority sequence under the HALT setting.
3. In case a macro service is a low priority level (status to disable interrupt of a low priority sequence under the HALT setting).
4. In case a macro service is a high priority level or the status to enable interrupt of a low priority sequence under the HALT setting.

3.4 RESET

When a low level is input to the $\overline{\text{RESET}}$ pin, the internal hardware is initialized (reset state).

When the $\overline{\text{RESET}}$ input becomes from a low level to a high level, the following data is set in the program counter (PC).

- Lower 8 bits of PC: Contents of 0000H address
- Upper 8 bits of PC: Contents of 0001H address

The contents of the PC set the destination address and the program starts to be executed from the address. Therefore, it can start from any address by reset start.

Please set the program for the contents of each register as required.

A noise eliminator has been incorporated the $\overline{\text{RESET}}$ input circuit to prevent any error from noise. This noise eliminator circuit is a sampling circuit based on analog delay.

Fig. 3-6 Reset Acknowledge

Set the $\overline{\text{RESET}}$ signal active in the reset operation at power-on until oscillator stabilization time (approx. 40 ms) elapses.

Fig. 3-7 Reset Operation at Power-On

4. INSTRUCTION SET

(1) 8-bit instructions

MOV, XCH, ADD, ADDC, SUB, SUBC, AND, OR, XOR, CMP, MULU, DIVUW, INC, DEC, ROR, ROL, RORC, ROLC, SHR, SHL, ROR4, ROL4, DBNZ, PUSH, POP

Table 4-1 8-Bit Instructions Classified by Addressing

2nd Operand 1st Operand	#byte	A	r r'	saddr saddr'	sfr	mem	& mem	!addr16	&!addr16	PSW	n	None*2

		X1 input rising/falling time (t_{xR} , t_{xF})	0	30	ns
		X1 input high/low level width (t_{wxH} , t_{wxL})	30	130	ns

Note When the clock oscillator is used, the following should be noted concerning wiring in the area in the figure enclosed by a dotted line to prevent the influence of wiring capacitance, etc.

- The wiring should be kept as short as possible.
- No other signal lines should be crossed.
- Keep away from lines carrying a high fluctuating current.
- The oscillator capacitor grounding point should always be at the same potential as V_{SS} . Do not connect to a ground pattern carrying a high current.
- A signal should not be taken from the oscillator.

7. RECOMMENDED SOLDERING CONDITIONS

This product should be soldered and mounted under the condition recommended in the table below.

For details of recommended soldering conditions refer to the information document "Surface Mount Technology Manual" (IEI-1207).

For soldering methods and conditions other than those recommended below, contact our sales personnel.

Table 7-1 Soldering Conditions for Surface Mounting Type

(1) μPD78233GC-3B9 : 80-pin plastic QFP (□14 mm)

μPD78234GC-xxx-3B9 : 80-pin plastic QFP (□14 mm)

μPD78237GC-3B9 : 80-pin plastic QFP (□14 mm)

μPD78238GC-xxx-3B9 : 80-pin plastic QFP (□14 mm)

Soldering Method	Soldering Condition	Recommended Condition Symbol
Infrared reflow	Package peak temperature : 230 °C Duration : 30 sec. max. (at 210 °C or above) Number of times : Once, Time limit : 2 days* (Thereafter 16 hours prebaking requires 125 °C)	IR30-162-1
Infrared reflow	Package peak temperature : 235 °C Duration : 30 sec. max. (at 210 °C or above) Number of times : Once, Time limit : 2 days* (Thereafter 20 hours prebaking requires 125 °C)	IR35-202-1
VPS	Package peak temperature : 215 °C Duration : 40 sec. max. (at 200 °C or above) Number of times : Once, Time limit : 2 days* (Thereafter 16 hours prebaking requires 125 °C)	VP15-162-1
VPS	Package peak temperature : 215 °C Duration : 40 sec. max. (at 200 °C or above) Number of times : Once, Time limit : 2 days* (Thereafter 20 hours prebaking requires 125 °C)	VP15-202-1
Wave soldering	Solder bath temperature : 260 °C max. Duration : 10 sec. max., Number of times : Once Preheating temperature : 120 °C max. (package surface temperature) Time limit : 2 days* (Thereafter 16 hours prebaking requires 125 °C)	WS60-162-1
Pin part heating	Pin part temperature : 300 °C max. Duration : 3 sec. max. (per device side)	—

- (2) μPD78233GJ-5BG : 94-pin plastic QFP (□20 mm)
 μPD78234GJ-xxx-5BG : 94-pin plastic QFP (□20 mm)
 μPD78237GJ-5BG : 94-pin plastic QFP (□20 mm)
 μPD78238GJ-xxx-5BG : 94-pin plastic QFP (□20 mm)

Soldering Method	Soldering Condition	Recommended Condition Symbol
Infrared reflow	Package peak temperature : 230 °C Duration : 30 sec. max. (at 210 °C or above) Number of times : Once, Time limit: 7 days* (Thereafter 10 hours prebaking required at 125 °C)	IR30-107-1
VPS	Package peak temperature : 215 °C Duration : 40 sec. max. (at 200 °C or above) Number of times : Once, Time limit : 7 days* (Thereafter 10 hours prebaking required at 125 °C)	VP15-107-1
Wave soldering	Solder bath temperature : 260 °C Duration : 10 sec. max., Number of times : Once Preheating temperature : 120 °C max. (package surface temperature) Time limit : 7 days* (Thereafter 10 hours prebaking required at 125 °C)	WS60-107-1
Pin part heating	Pin part temperature : 300 °C max. Duration : 3 sec. max. (per device side)	—

- (3) μPD78233LQ : 84-pin plastic QFJ (□1150 mil)
 μPD78234LQ-xxx : 84-pin plastic QFJ (□1150 mil)
 μPD78237LQ : 84-pin plastic QFJ (□1150 mil)
 μPD78238LQ-xxx : 84-pin plastic QFJ (□1150 mil)

Soldering Method	Soldering Condition	Recommended Condition Symbol
VPS	Package peak temperature : 215 °C Duration : 40 sec. max. (at 200 °C or above) Number of times : Once, Time limit: 7 days* (Thereafter 10 hours prebaking required at 125 °C)	VP15-107-1
Pin part heating	Pin part temperature : 300 °C max. Duration : 3 sec. max. (per device side)	—

* For the storage period after dry-packdecapsulation, storage conditions are max. 25 °C, 65% PH.

Note Use of more than one soldering method should be avoided (except in the case of pin part heating).

Notice

A version of this product with improved recommended soldering conditions is available. For details (improvements such as infrared reflow peak temperature extension (235 °C), number of times: twice, relaxation of time limit, etc.), contact NEC sales personnel.

APPENDIX A. DEVELOPMENT TOOLS

The following development tools are available for system development using the μ PD78233, 78234, 78237 and 78238.

Language Processing Software

RA78K/II*1,2	78K/II series common assembler package
CC78K/II*1,2	78K/II series common C compiler package
CC78K/II-L*1,2	78K/II series common C compiler library source file

PROM Write Tools

PG-1500	PROM programmer
PA-78P238GC PA-78P238GJ PA-78P238KF PA-78P238LQ	Programmer adapter connected to PG-1500
PG-1500 Controller*1	PG-1500 control program

Debugging Tools

IE-78230-R-A IE-78230-R*3	μ PD78234 series common in-circuit emulator
IE-78200-R-BK	78K/II series common break board
IE-78230-R-EM IE-78200-R-EM*3	μ PD78234 series common emulation board
EP-78230GC-R EP-78230GJ-R EP-78230LQ-R	μ PD78234 series common emulation probe
EV-9200G-94 EV-9200GC-80	Socket to be mounted on user system board created for the 94-pin plastic QFP and the 80-pin plastic QFP
EV-9900	Jig to be used for removing μ PD78P238KF from EV-9200G-94
SD78K/II*1	IE-78230-R-A screen debugger
DF78230*1	μ PD78234 series device file

Real-Time OS

RX78K/II*1,2	78K/II series common real-time OS
--------------	-----------------------------------

Phase-out/Discontinued**Fuzzy Inference Development Support System**

FE9000*1	Fuzzy knowledge data creation tool
FT9080*1	Translator
FI78K/II*1	Fuzzy inference module
FD78K/II*1,4	Fuzzy inference debugger

- * 1. PC-9800 series (MS-DOS™) based, IBM PC/AT™ (PC DOS™) based
2. HP9000 series 300™ (HP-UX™) based, SPARCstation™ (Sun OS™) based, EWS-4800 series™ (EWS-UX/V™) based
3. No longer manufactured and not available for purchase.
4. Under development

Remarks For development tools manufactured by a third party, see "78K/II Series Development Tools Selection Guide (FE-231)".

[MEMO]

No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.

NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.

The devices listed in this document are not suitable for use in aerospace equipment, submarine cables, nuclear reactor control systems and life support systems. If customers intend to use NEC devices for above applications or they intend to use "Standard" quality grade NEC devices for applications not intended by NEC, please contact our sales people in advance.

Application examples recommended by NEC Corporation

Standard: Computer, Office equipment, Communication equipment, Test and Measurement equipment, Machine tools, Industrial robots, Audio and Visual equipment, Other consumer products, etc.

Special: Automotive and Transportation equipment, Traffic control systems, Antidisaster systems, Anticrime systems, etc.
