

DIAMOND

Fiber Optic Components

The E-2000™ PS System is designed for high power applications up to 2 Watt optical power. The E-2000™ PS connector has been developed to support the continuous raise of higher bitrates and longer transmission distances, within DWDM technology, and is based on expanded beam technology.

A section of graded index fiber is introduced as a collimating lens, which enlarges the beam diameter and reduces power density at the connector interface.

All of the features, users have come to expect from the E-2000 family, are available from the E-2000™ PS, including: ease of installation, integrated protection caps, color coding, mechanical keying and excellent vibration resistance.

Highlights

- Injection molded housing (UL 94 V0 flammability rating)
- Spring-loaded shutters on mating adapters
- Integrated black metal protective caps
- Interchangeable color-coded and mechanically keyed thumb-latches and frames
- High modular connector-system

• Benefits

- Connector housing totally encloses ferrule to optimally protect it from dust, contaminants and scratches.
- Engage automatically to protect personnel from eye-damaging laser radiation.
- Angled, anti-reflection surface ensures low reflectance in unmated state.
- Maximizes operator eye safety protection from damaging laser radiation.
- Close automatically upon extraction to protect ferrule from dust and scratches.
- Permit clear and unmistakable identification of lines on crowded patch panels.
- Guard against improper connections.
- Single channel components can be upgraded to duplex through the use of a simple clip-bridge and an extended thumb-latch.

Specifications:

STANDARD	Single mode 4° APC	Units	Test conditions
Insertion loss (IL)	typ. 0.2 max. 0.6	dB	IEC 61300; Random
Insertion loss (IL)	typ. 0.2 max. 0.4	dB	IEC 61300; Against reference
Repeatability of IL	max. ±0.1	dB	Over service life
ΔIL vs. wavelength	max. ±0.15	dB	IEC 61300; λ = from 1300 to 1625 nm
Return loss (RL)	min. 75*	dB	IEC 61300
Service life	1000 mate/demate cycles		
Operating temperature	-40 / +85	°C	May be further limited by cable specifications
Storage temperature	-40 / +90	°C	

* Measured with high resolution reflectometer HP 8504A

POWER SOLUTION

Safety information for E-2000™ Power Solution

The E-2000™ Power Solution (PS) connector takes advantage of the expanded beam technology to reduce the density of the optical power at the interface of the connection. This way the connector results to be less sensitive to contaminations, and the bearable maximum power that can be transmitted without consequences is greater.

Cleaning

Cleanliness still remains the key word using high power. The basic concept using PS connectors is therefore the following: " before each mating procedure, the connectors must be absolutely clean and inspected with a microscope ". The ferrules surface inspection should be operated using an optical microscope with a magnification of at least 200x. The connector is normally affected by contaminations during handling and mating procedures; the degree of cleanliness of the overall installation is also critical parameter to be taken into consideration.

Handling

The E-2000™ Power Solution connectors should be operated with high power only when connected. When unmated, the light source must absolutely be switched off.

Safety

Using standard as well as high power PS connectors with optical power of tens or hundreds of mW, the knowledge and respect of the safety standards is essential.

A laser source emitting 1 Watt at 1550 nm in a SM fiber is for instance recorded as a class 3B (IEC 825-1 and 825-2 standards), while the same laser with a collimated output will be classified as a class 4.

The main safety precautions that have to be considered working with class 4 lasers are summarized as follows:

- usage in restricted area, access only for authorized and qualified personnel ;
- use protective glasses, skin protective measures recommended;
- optical behavior under control: eliminate reflections (also diffuse), close unused optical channels, avoid light beams on eye level;
- switch on/off system with remote control or interlock and additional automatic switch off safety system;
- warning signal when sources are active;
- laser classification markings and danger indications.
