To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: http://www.renesas.com

Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (http://www.renesas.com)

Send any inquiries to http://www.renesas.com/inquiry.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: "Standard", "High Quality", and "Specific". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as "Specific" without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as "Specific" or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is "Standard" unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.

   "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.

   "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.

   "Specific": Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

HM64YLB36512 Series

16M Synchronous Late Write Fast Static RAM (512-kword × 36-bit)

REJ03C0270-0300
Rev.3.00
Jan.13.2006

Description

The HM64YLB36512 is a synchronous fast static RAM organized as 512-kword × 36-bit. It has realized high speed access time by employing the most advanced CMOS process and high speed circuit designing technology. It is most appropriate for the application which requires high speed, high density memory and wide bit width configuration, such as cache and buffer memory in system. It is packaged in standard 119-bump BGA.

Note: All power supply and ground pins must be connected for proper operation of the device.

Features

- 2.5 V ± 5% operation and 1.5 V (V_{DDQ})
- 16M bit density
- Byte write control (4 byte write selects, one for each 9-bit)
- Optional ×18 configuration
- HSTL compatible I/O
- Programmable impedance output drivers
- Asynchronous $\overline{G}$ output control
- Asynchronous sleep mode
- FC-BGA 119pin package with SRAM JEDEC standard pinout
- Limited set of boundary scan JTAG IEEE 1149.1 compatible
- Mode selectable among late write, associative late write (late select) and register-latch
- Late select mode:
  - Synchronous register to register operation
  - Late SAS select, selects which half of 72-bit core data to return on reads
  - SAS serves as way select
  - Differential HSTL clock inputs
- Late write mode:
  - Synchronous register to register operation
  - Differential HSTL clock inputs
- Register-latch mode:
  - Synchronous register to latch operation
  - Differential pseudo-HSTL clock inputs

Ordering Information

Type No.	Organization	Modes	Access time	Cycle time	Package
HM64YLB36512BP-28	512k × 36	Late select mode Late write mode	1.6 ns	2.8 ns	119-bump 1.27 mm 14 mm × 22 mm BGA PRBG0119DB-A (BP-119E)
HM64YLB36512BP-33	512k × 36	Late select mode Late write mode	1.6 ns	3.3 ns	
		Register-latch mode	5.5 ns	6.5 ns	

Note: HM: Hitachi Memory prefix, 64: External Cache SRAM, Y: V_{DD} = 2.5 V, L: Dual Mode SRAM, B: V_{DDQ} = 1.5 V

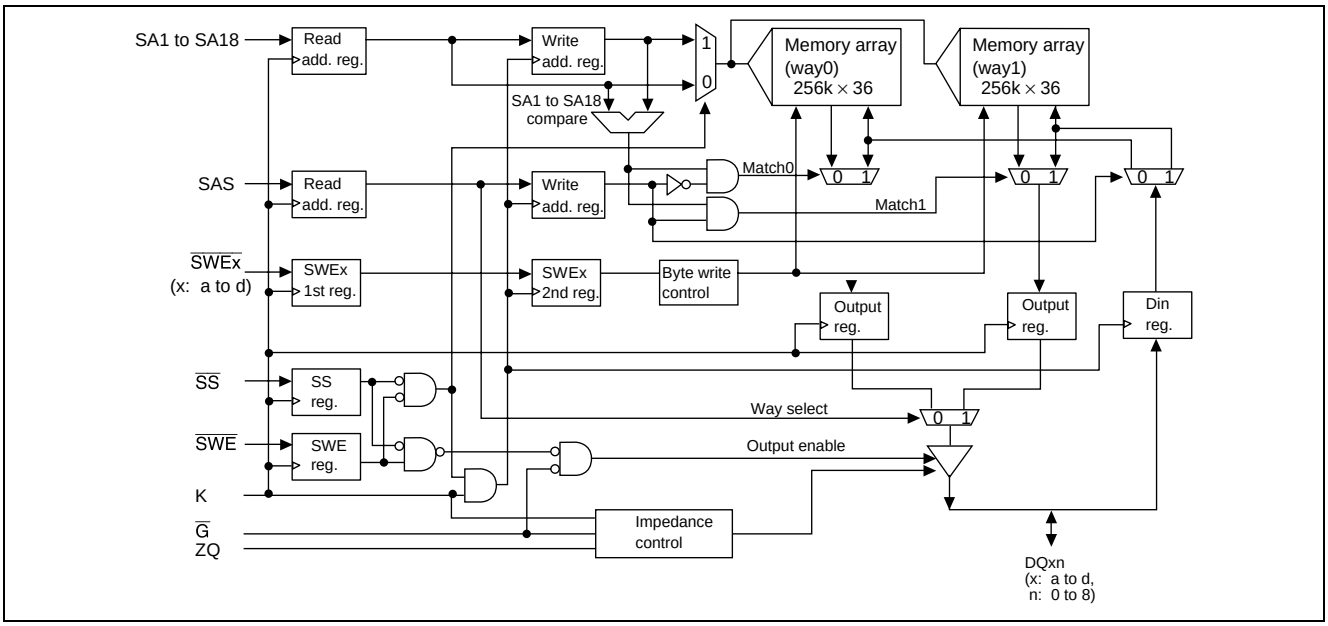
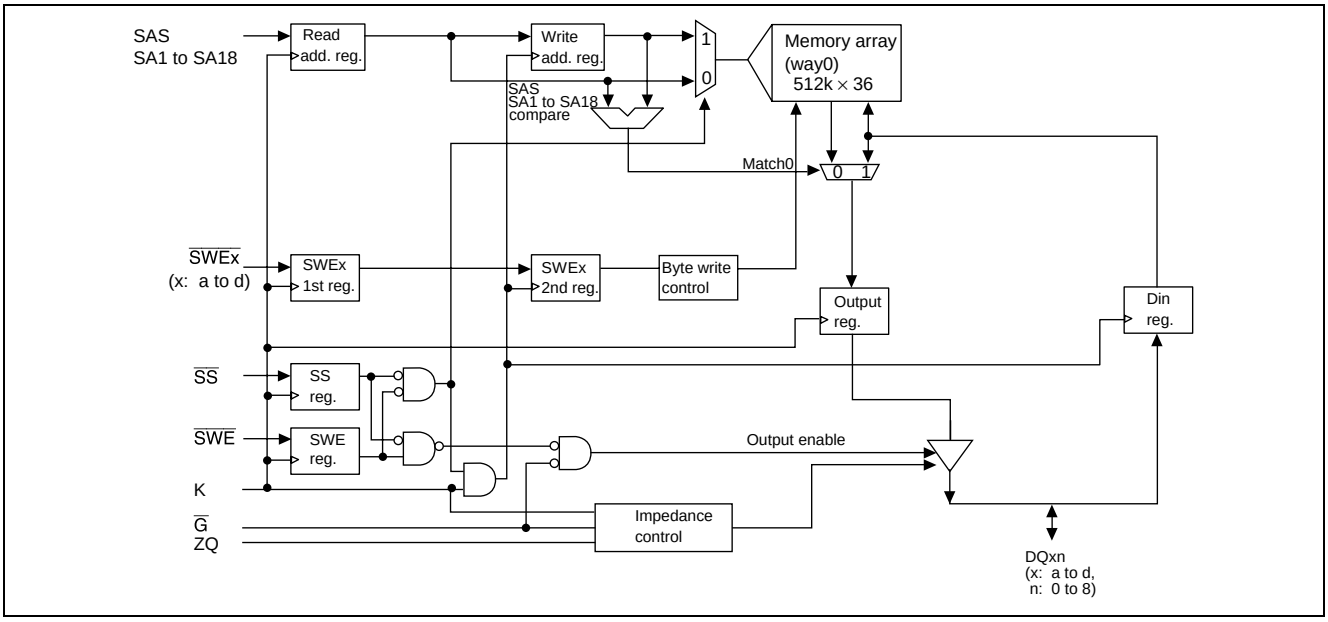
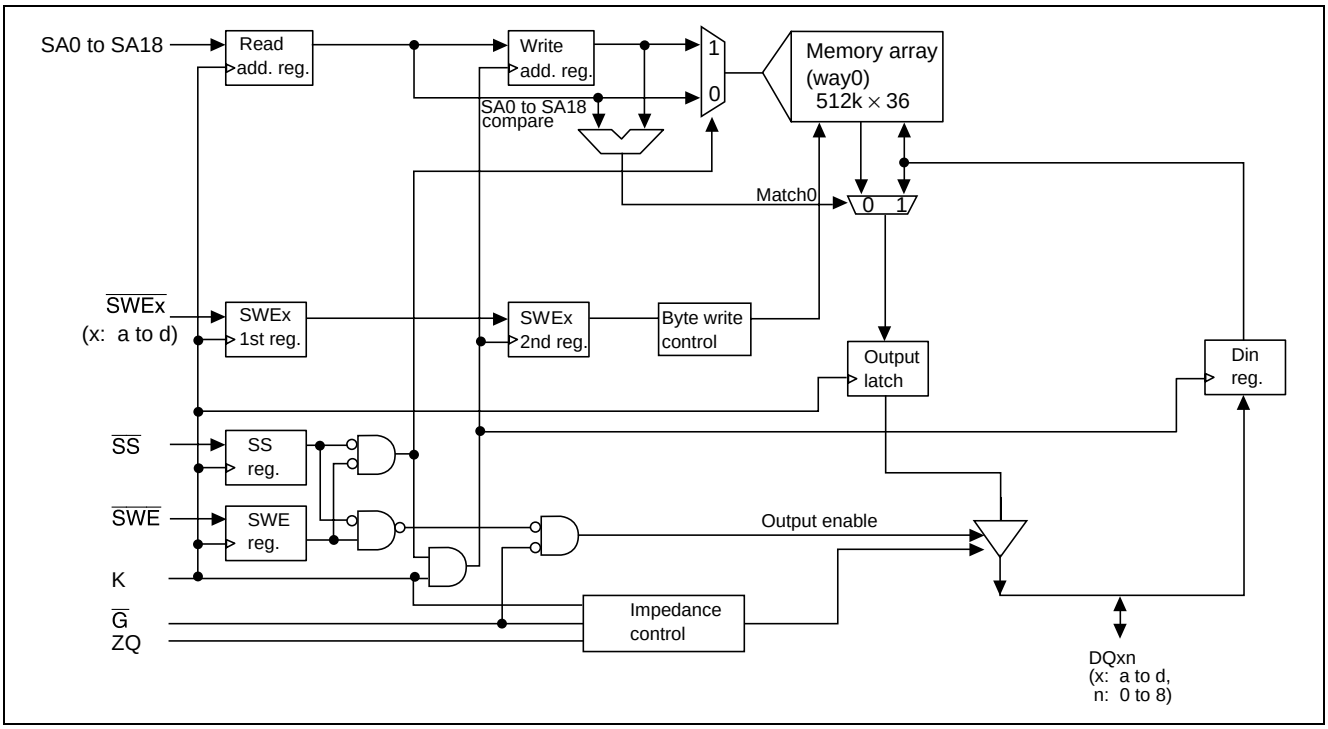
Block Diagram (Late Select Mode)



Block Diagram (Late Write Mode)



Block Diagram (Register-Latch Mode)



Pin Descriptions

Name	I/O type	Descriptions	Notes
V_{DD}	Supply	Core power supply	
V_{SS}	Supply	Ground	
V_{DDQ}	Supply	Output power supply	
V_{REF}	Supply	Input reference, provides input reference voltage	
K	Input	Clock input, active high	
$\overline{K}$	Input	Clock input, active low	
$\overline{SS}$	Input	Synchronous chip select	
$\overline{SWE}$	Input	Synchronous write enable	
SAn	Input	Synchronous address input	n: 1 to 18 (Late select mode) (Late write mode) n: 0 to 18 (Register-latch mode)
SAS	Input	Late select: Synchronous way select Late write: Synchronous address input	SA0 in the register-latch mode
$\overline{SWEx}$	Input	Synchronous byte write enables	x: a to d
$\overline{G}$	Input	Asynchronous output enable	
ZZ	Input	Power down mode select	
ZQ	Input	Output impedance control	1
DQxn	I/O	Synchronous data input/output	x: a to d n: 0 to 8
M1, M2	Input	Output protocol mode select	
TMS	Input	Boundary scan test mode select	
TCK	Input	Boundary scan test clock	
TDI	Input	Boundary scan test data input	
TDO	Output	Boundary scan test data output	
NC	—	No connection	

M1	M2	Protocol	Notes
V_{SS}	V_{SS}	Synchronous register to register operation (late select mode)	2
V_{SS}	V_{DD}	Synchronous register to register operation (late write mode)	3
V_{DD}	V_{SS}	Synchronous register to latch operation (register-latch mode)	2

Notes: 1. ZQ is to be connected to V_{SS} via a resistance RQ where 175 Ω ≤ RQ ≤ 300 Ω. If ZQ = V_{DDQ} or open, output buffer impedance will be maximum.

2. Mode control pins M1 and M2 are used to select different read protocols.
   These mode control input pins are set at power-up and will not change the states during the SRAM operates.
   Late select mode: Single clock, late SAS select, pipelined read protocol
   Late write mode: Single clock, pipelined read protocol
   Register-latch mode: Single differential clock register-latch mode protocol
3. Mode control pin M2 can be set to V_{DDQ} instead of V_{DD}.

Notes: 1. H: V_{IH}, L: V_{IL}, ×: V_{IH} or V_{IL}

2. $\overline{SWE}$, $\overline{SS}$, $\overline{SWEa}$ to $\overline{SWEd}$, SA and SAS are sampled at the rising edge of K clock.

Programmable Impedance Output Drivers

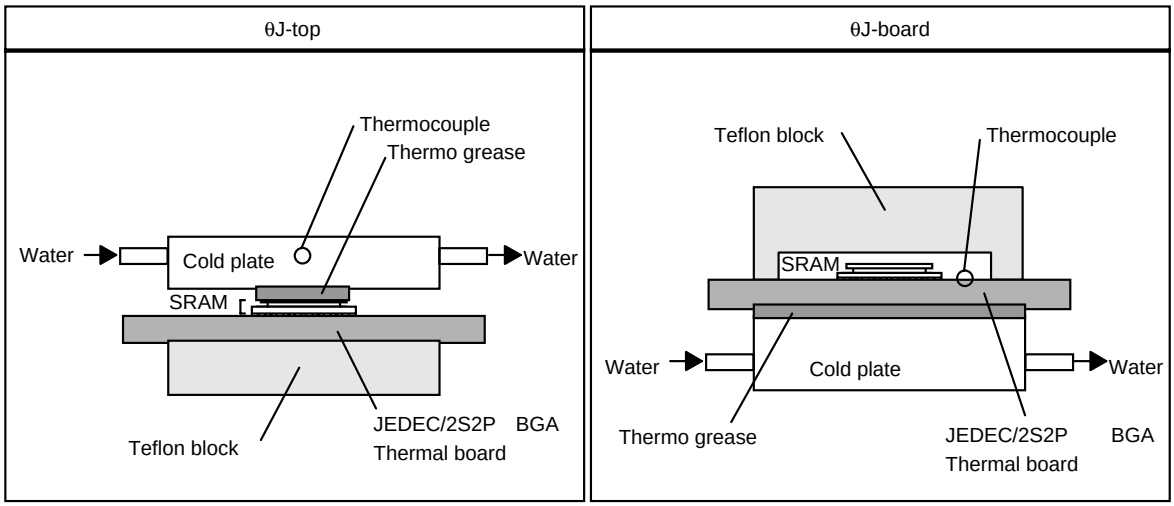
Output buffer impedance can be programmed by terminating the ZQ pin to V_{SS} through a precision resistor (RQ). The value of RQ is five times the output impedance desired. The allowable value of RQ to guarantee impedance matching with a tolerance of 15% is 250 Ω. If the status of ZQ pin is open, output impedance is maximum value. Maximum impedance also occurs with ZQ connected to V_{DDQ}. The impedance update of the output driver occurs when the SRAM is in high-Z. Write and deselect operations will synchronously switch the SRAM into and out of high-Z, therefore will trigger an update. At power up, the output buffer is in high-Z. It will take 4,096 cycles for the impedance to be completely updated.

Absolute Maximum Ratings

Parameter	Symbol	Rating	Unit	Notes
Input voltage on any pin	V_{IN}	–0.5 to V_{DDQ} + 0.5	V	1, 4
Core supply voltage	V_{DD}	–0.5 to +3.13	V	1
Output supply voltage	V_{DDQ}	–0.5 to +2.1	V	1, 4
Operating temperature	T_{OPR}	0 to +85	°C	
Storage temperature	T_{STG}	–55 to +125	°C	
Output short-circuit current	I_{OUT}	25	mA	
Latch up current	I_{LI}	200	mA	
Package junction to top thermal resistance	θJ-top	6.5	°C/W	5
Package junction to board thermal resistance	θJ-board	12	°C/W	5

Notes: 1. All voltage is referenced to V_{SS}.

2. Permanent device damage may occur if absolute maximum ratings are exceeded. Functional operation should be restricted the operation conditions. Exposure to higher voltages than recommended voltages for extended periods of time could affect device reliability.
3. These CMOS memory circuits have been designed to meet the DC and AC specifications shown in the tables after thermal equilibrium has been established.
4. The following supply voltage application sequence is recommended: V_{SS}, V_{DD}, V_{DDQ}, V_{REF} then V_{IN}. Remember, according to the absolute maximum ratings table, V_{DDQ} is not to exceed 2.1 V, whatever the instantaneous value of V_{DDQ}.
5. See figure below.



Note: The following DC and AC specifications shown in the tables, this device is tested under the minimum transverse air flow exceeding 500 linear feet per minute.

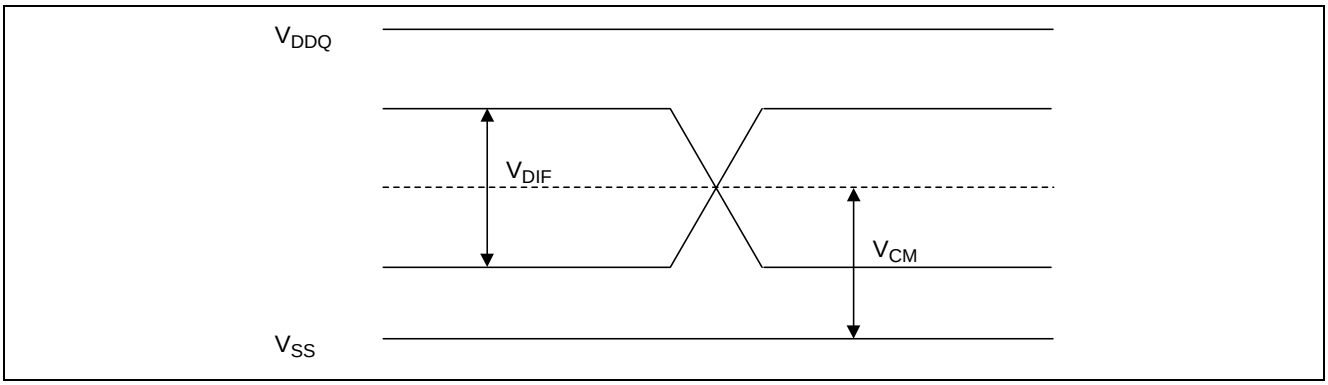
Recommended DC Operating Conditions

(Ta = 0 to +85°C)

Parameter	Symbol	Late select mode Late write mode			Register-latch mode			Unit	Notes
		Min	Typ	Max	Min	Typ	Max		
Power supply voltage: core	V_{DD}	2.38	2.50	2.63	2.38	2.50	2.63	V	
Power supply voltage: I/O	V_{DDQ}	1.40	1.50	1.60	1.40	1.50	1.60	V	
Input reference voltage: I/O	V_{REF}	0.60	0.75	0.90	0.70	0.75	0.80	V	1
Input high voltage	V_{IH}	V_{REF} + 0.10	—	V_{DDQ} + 0.30	V_{REF} + 0.15	—	V_{DDQ} + 0.50	V	4
Input low voltage	V_{IL}	–0.30	—	V_{REF} – 0.10	–0.50	—	V_{REF} – 0.15	V	4
Clock differential voltage	V_{DIF}	0.10	—	V_{DDQ} + 0.30	0.10	—	V_{DDQ} + 0.30	V	2, 3
Clock common mode voltage	V_{CM}	0.60	—	0.90	0.90	—	1.30	V	3

Notes: 1. Peak to peak AC component superimposed on V_{REF} may not exceed 5% of V_{REF}.
2. Minimum differential input voltage required for differential input clock operation.
3. See figure below.
4. V_{REF} = 0.75 V (typ).

Differential Voltage / Common Mode Voltage



DC Characteristics

($Ta = 0$ to $+85°C$, $V_{DD} = 2.5\ V \pm 5\%$)

Parameter	Symbol	Late select mode Late write mode		Register-latch mode		Unit	Notes
		Min	Max	Min	Max		
Input leakage current	I_{LI}	—	2	—	2	µA	1
Output leakage current	I_{LO}	—	5	—	5	µA	2
Standby current	I_{SBZZ}	—	150	—	150	mA	3
V_{DD} operating current, excluding output drivers	I_{DD}	—	450	—	350	mA	4
Quiescent active power supply current	I_{DD2}	—	200	—	200	mA	5
Maximum power dissipation, including output drivers	P	—	2.3	—	2.3	W	6

Parameter	Symbol	Min	Typ	Max	Unit	Notes
Output low voltage	V_{OL}	V_{SS}	—	$V_{SS} + 0.4$	V	7
Output high voltage	V_{OH1}	$V_{DDQ} - 0.4$	—	V_{DDQ}	V	8
	V_{OH2}	1.3	—	V_{DDQ}	V	12
ZQ pin connect resistance	RQ	—	250	—	Ω	
Output “Low” current	I_{OL}	$(V_{DDQ}/2) / \{(RQ/5) - 15\%\}$		$(V_{DDQ}/2) / \{(RQ/5) + 15\%\}$	mA	9, 11
Output “High” current	I_{OH}	$(V_{DDQ}/2) / \{(RQ/5) + 15\%\}$		$(V_{DDQ}/2) / \{(RQ/5) - 15\%\}$	mA	10, 11

Notes:
1. $0 \le V_{IN} \le V_{DDQ}$ for all input pins (except V_{REF}, ZQ, M1, M2 pin)
2. $0 \le V_{OUT} \le V_{DDQ}$, DQ in high-Z
3. All inputs (except clock) are held at either V_{IH} or V_{IL}, ZZ is held at V_{IH}, $I_{OUT} = 0$ mA. Specification is guaranteed at +75°C junction temperature.
4. $I_{OUT} = 0$ mA, read 50% / write 50%, $V_{DD} = V_{DD}$ max, frequency = min. cycle
5. $I_{OUT} = 0$ mA, read 50% / write 50%, $V_{DD} = V_{DD}$ max, frequency = 3 MHz
6. Output drives a 12 pF load and switches every cycle. This parameter should be used by the SRAM designer to determine electrical and package requirements for the SRAM device.
7. RQ = 250 Ω, I_{OL} = 6.8 mA
8. RQ = 250 Ω, I_{OH} = –6.8 mA
9. Measured at $V_{OL} = 1/2\ V_{DDQ}$
10. Measured at $V_{OH} = 1/2\ V_{DDQ}$
11. The total external capacitance of ZQ pin must be less than 7.5 pF.
12. RQ = 250 Ω, I_{OH} = –100 µA

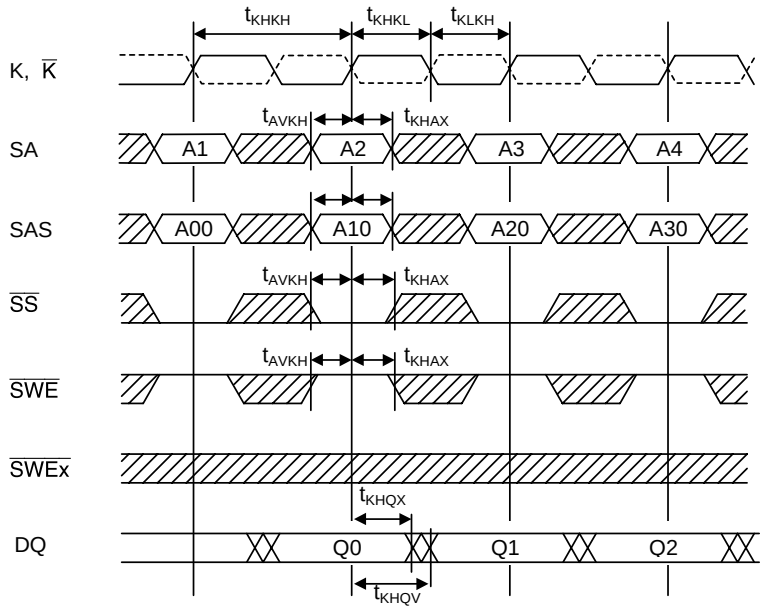
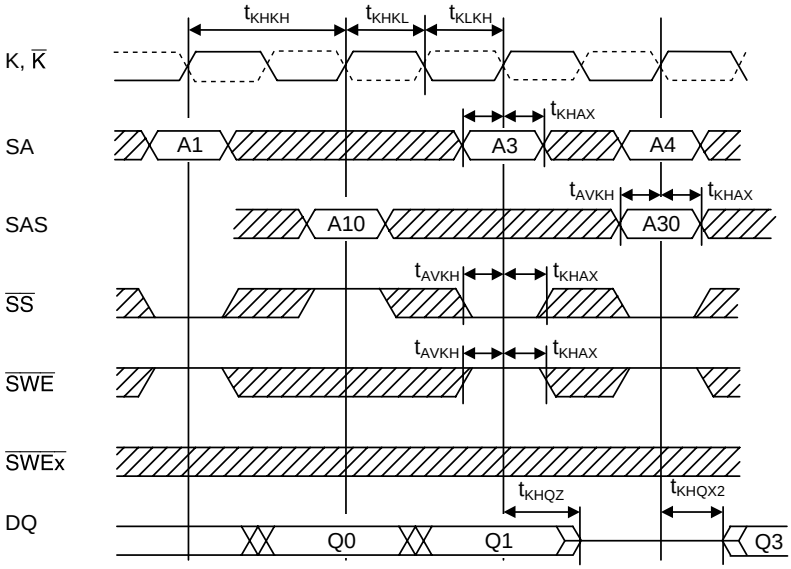
Notes: 1. See figure in ”AC Test Conditions”.
2. Parameters may be guaranteed by design, i.e., without tester guardband.
3. Transitions are measured ±50 mV of output high impedance from output low impedance.
4. Transitions are measured ±50 mV from steady state voltage.
5. When ZZ is switching, clock input K must be at the same logic level for the reliable operation.
6. Minimum value is verified by design and tested without guardband.

Timing Waveforms (Late Select Mode)

Read Cycle-1

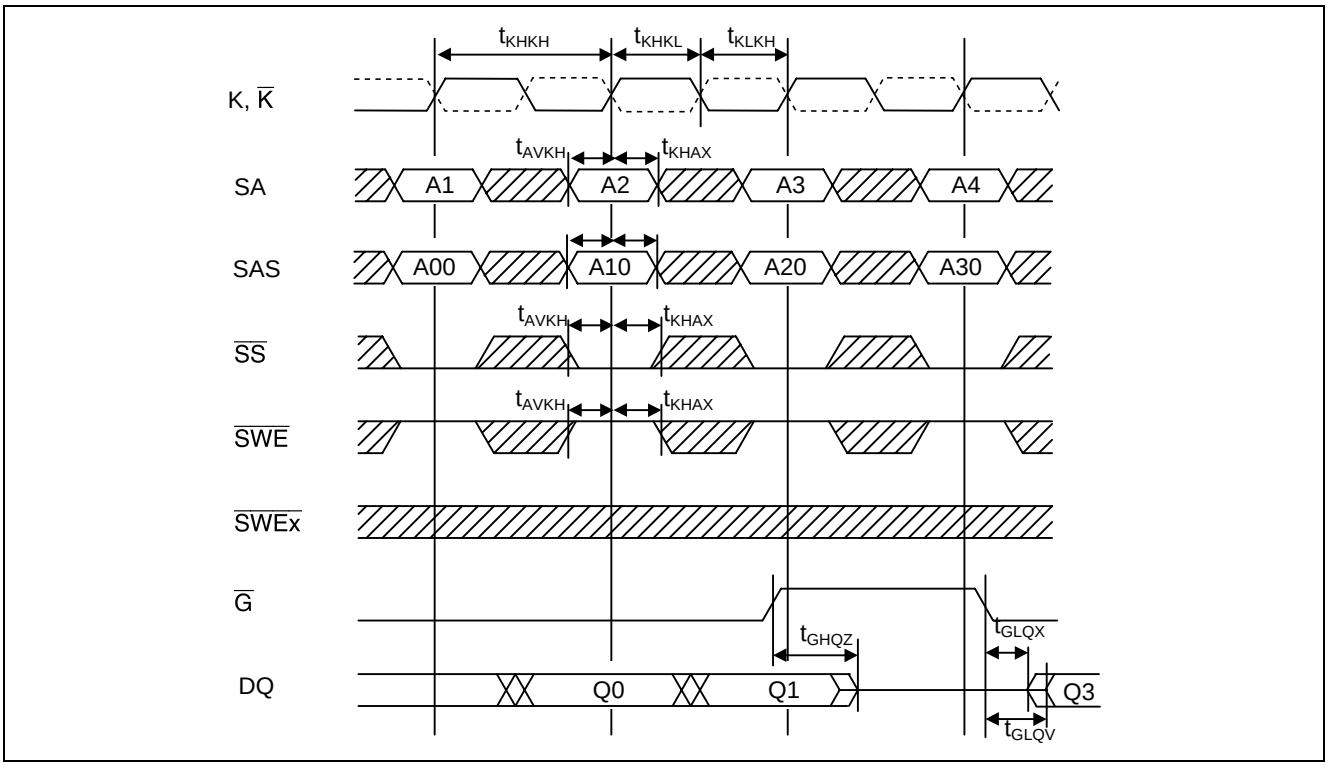


Read Cycle-2 ($\overline{SS}$ Controlled)



Notes: $\overline{G}$, ZZ = V_{IL}, x: a to d

Read Cycle-3 ($\overline{G}$ Controlled)

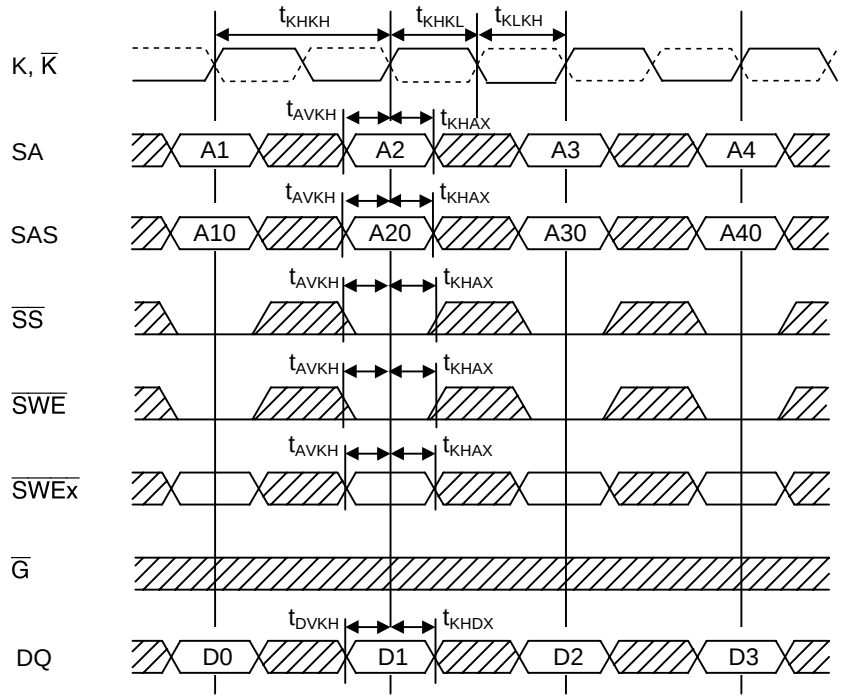


Read operation (late select mode)

During read cycle, N-1 bits of address (SA) are registered during the first rising clock edge. The Nth bit of address (SAS) is registered one clock edge later (the second edge). The setup time requirements for all address bits are the same. SAS is used as the Nth bit of address on both read and write.

The internal array is read between this first edge and second edge, and data is captured in the output register at the second clock edge. This requires the Nth address bit (SAS) to be used as the MUX select before the output register. Alternatively, the Nth address bit can be registered, and used as the MUX select during the data drive cycle. In that case, the output drive should still have a monotonic edge transition (no glitches due to logic switch).

Write Cycle

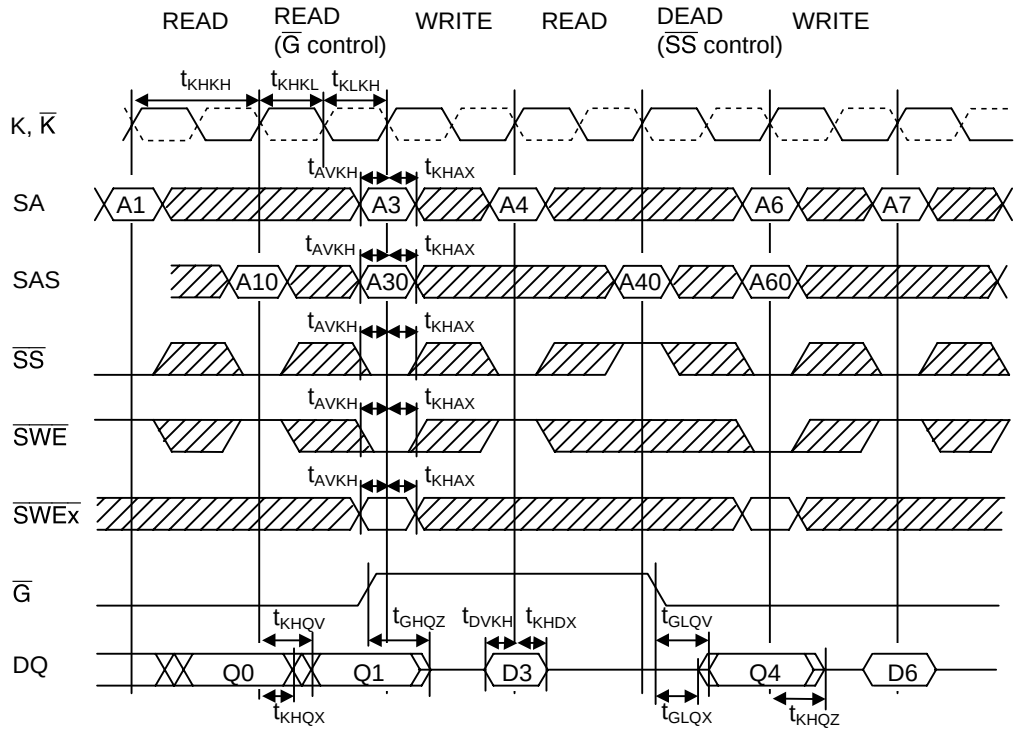


Notes: ZZ = V_{IL}, x: a to d

Write operation (late write and late select mode)

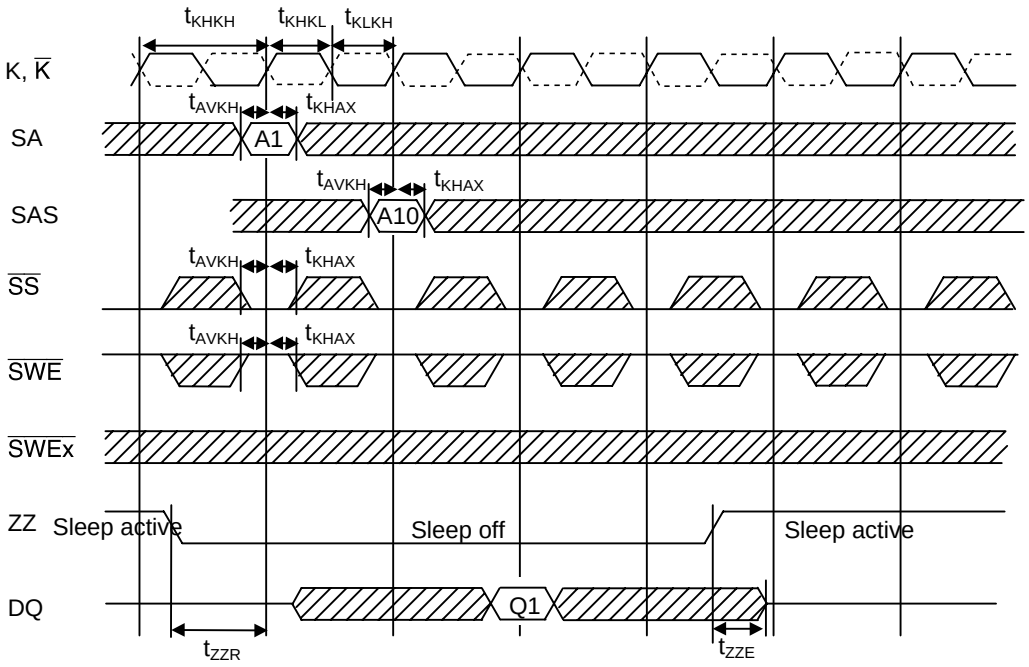
During writes, the write data follows the write address by one cycle. All N bits of address are presented during the same cycle. Any subsequent read to this address should get the latest data. Because in the actual implementation the data will be written into the SRAM array only after the next write address is received, a one-entry buffer is needed to hold the write data and to allow bypassing of data from the write buffer to the output if there is a read of the same address.

Read-Write Cycle



Notes: ZZ = V_{IL}, x: a to d

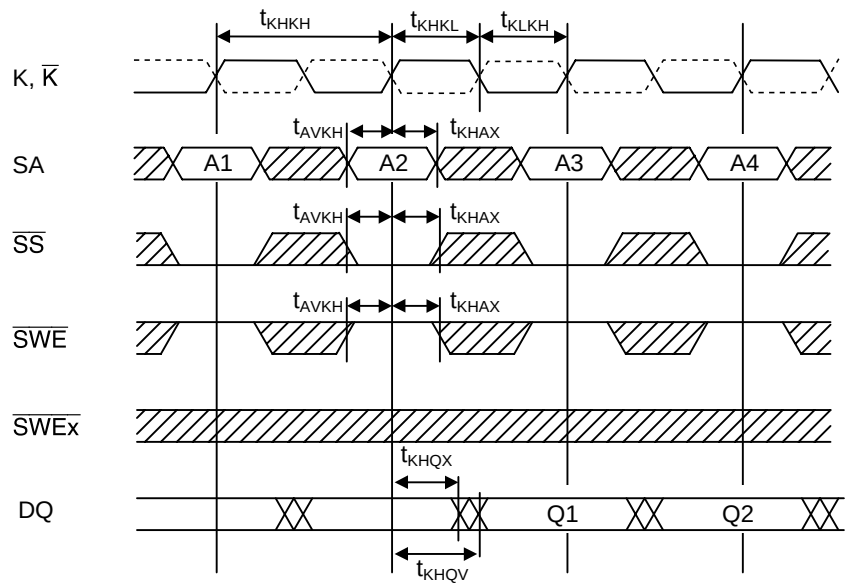
ZZ Control



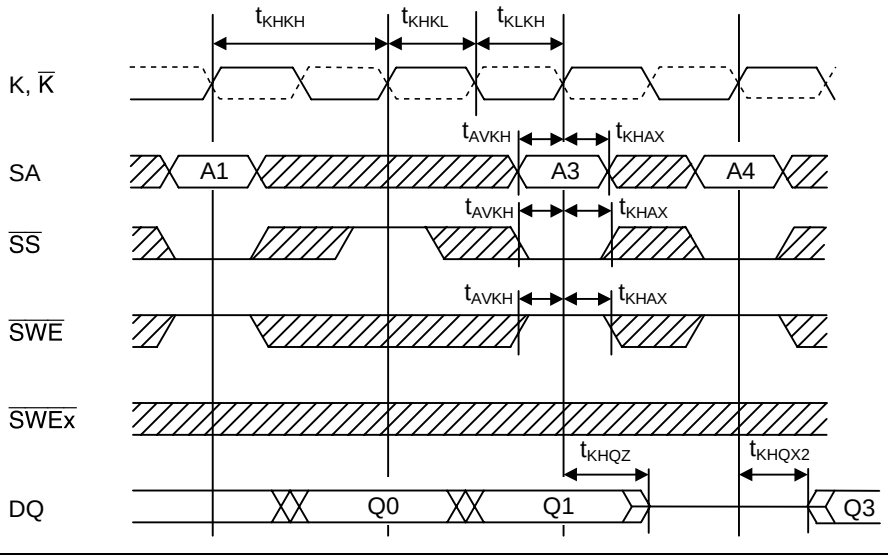
Notes: G = V_{IL}, x: a to d
When ZZ is switching, clock input K must be at the same logic level for the reliable operation.

Timing Waveforms (Late Write Mode)

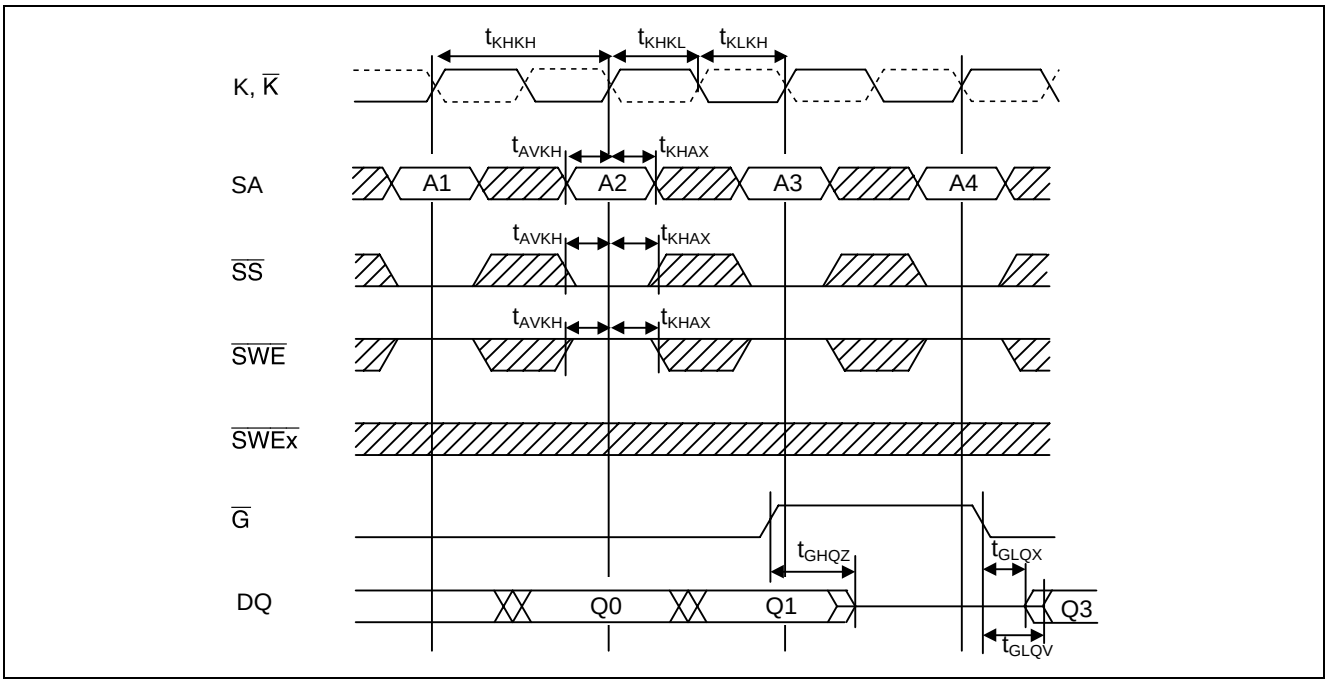
Read Cycle-1



Read Cycle-2 ($\overline{SS}$ Controlled)



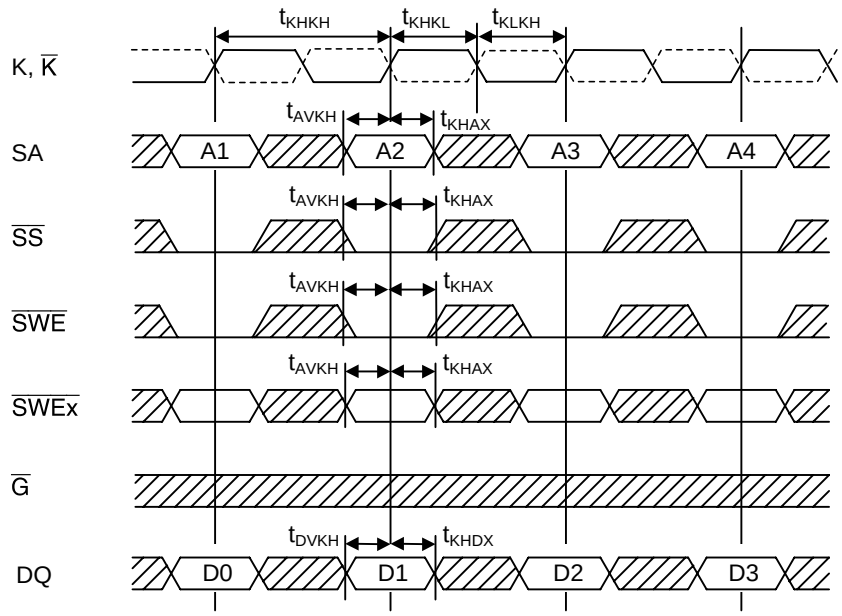
Read Cycle-3 ($\overline{G}$ Controlled)



Read operation (late write mode)

During read cycle, the address is registered during the first rising clock edge, the internal array is read between this first edge and second edge, and data is captured in the output register.

Write Cycle

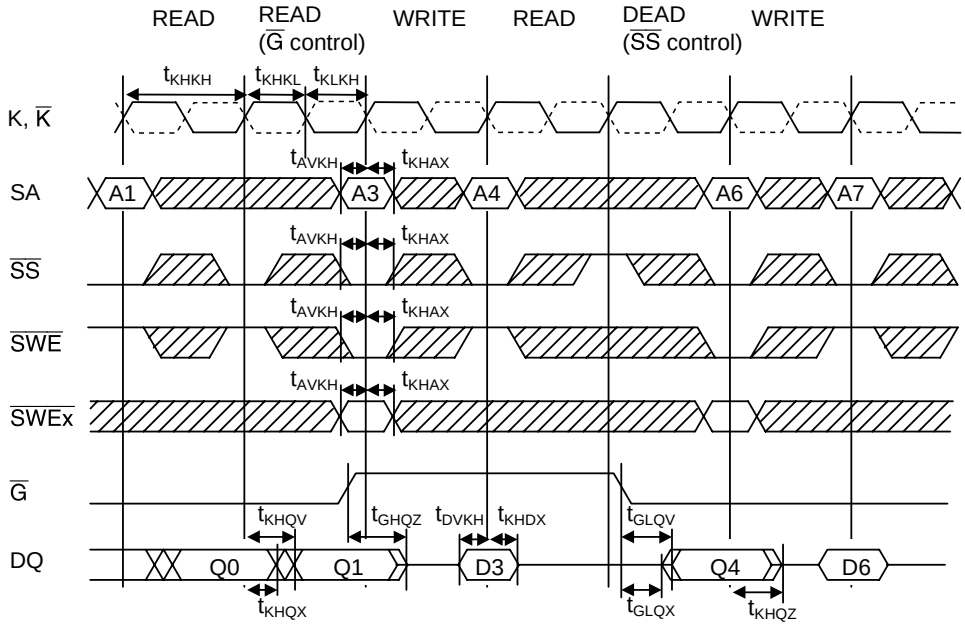


Notes: ZZ = V_{IL}, x: a to d

Write operation (late write and late select mode)

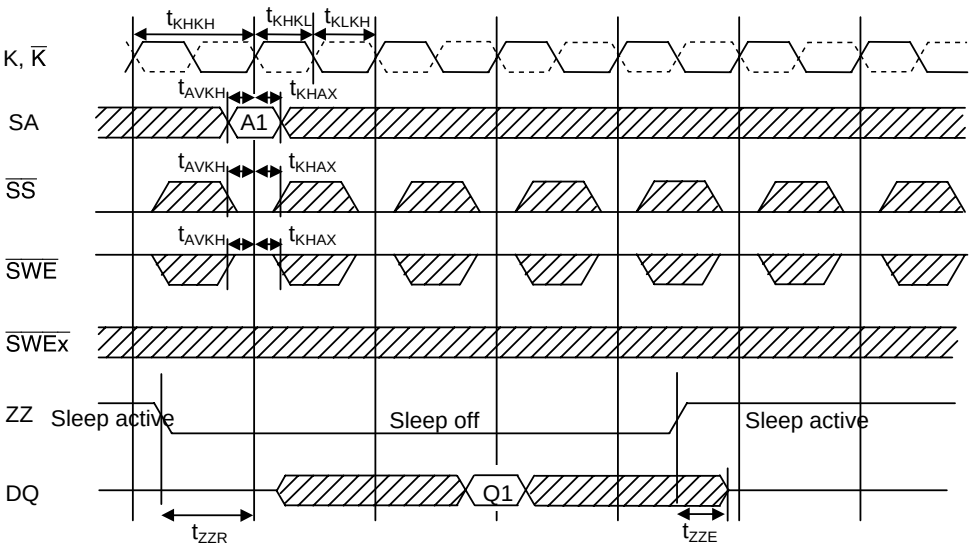
During write cycle, the write data follows the write address by one cycle. All N bits of address are presented during the same cycle. Any subsequent read to this address should get the latest data. Because in the actual implementation the data will be written into the SRAM array only after the next write address is received, a one-entry buffer is needed to hold the write data and to allow bypassing of data from the write buffer to the output if there is a read of the same address.

Read-Write Cycle



Notes: ZZ = V_{IL}, x: a to d

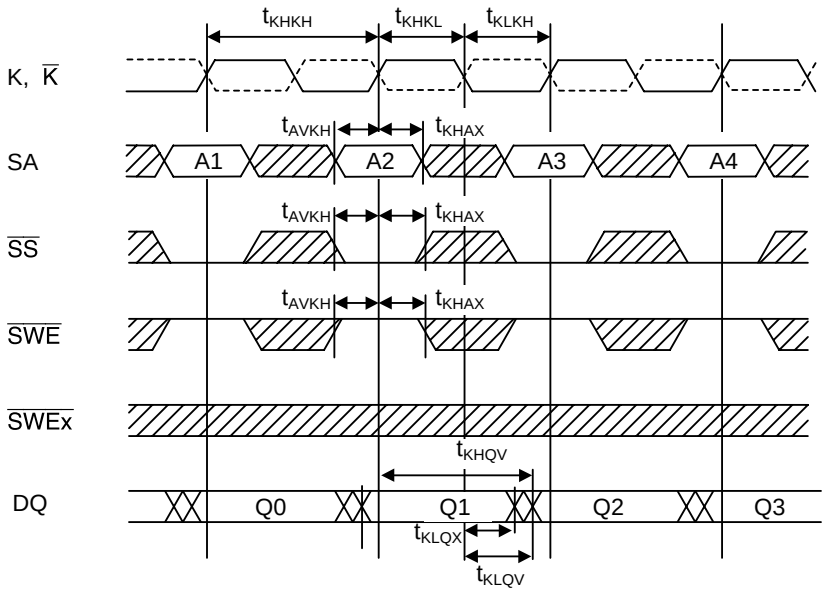
ZZ Control



Notes: G = V_{IL}, x: a to d
When ZZ is switching, clock input K must be at the same logic level for the reliable operation.

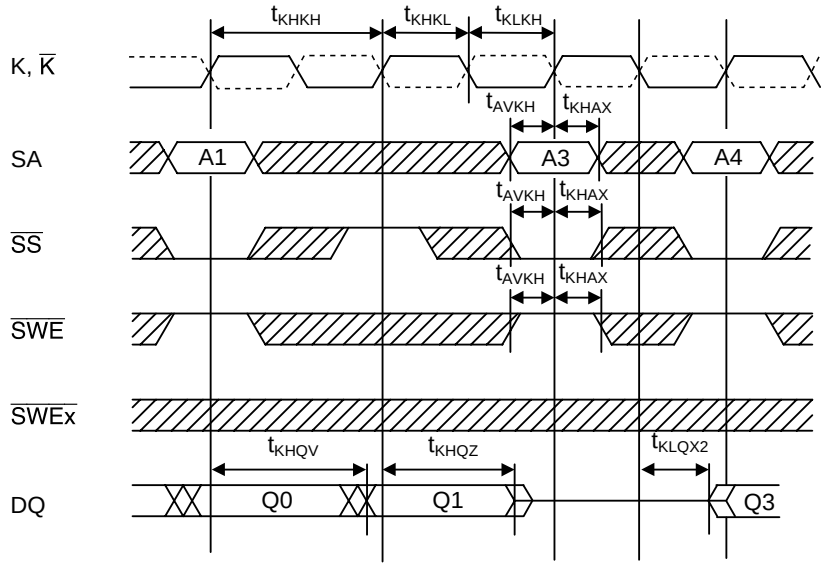
Timing Waveforms (Register-Latch Mode)

Read Cycle-1



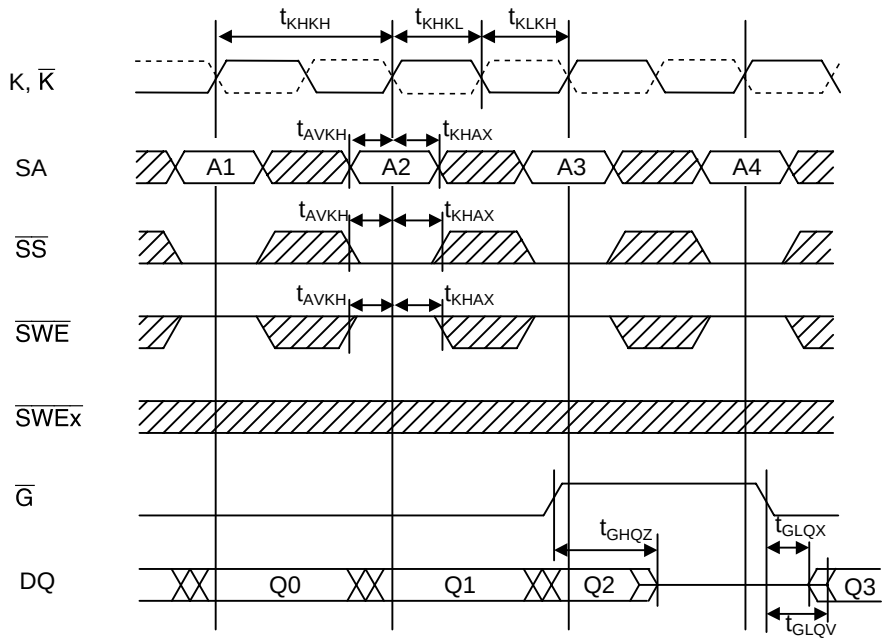
Note: ZZ = V_{IL}

Read Cycle-2 ($\overline{SS}$ Controlled)



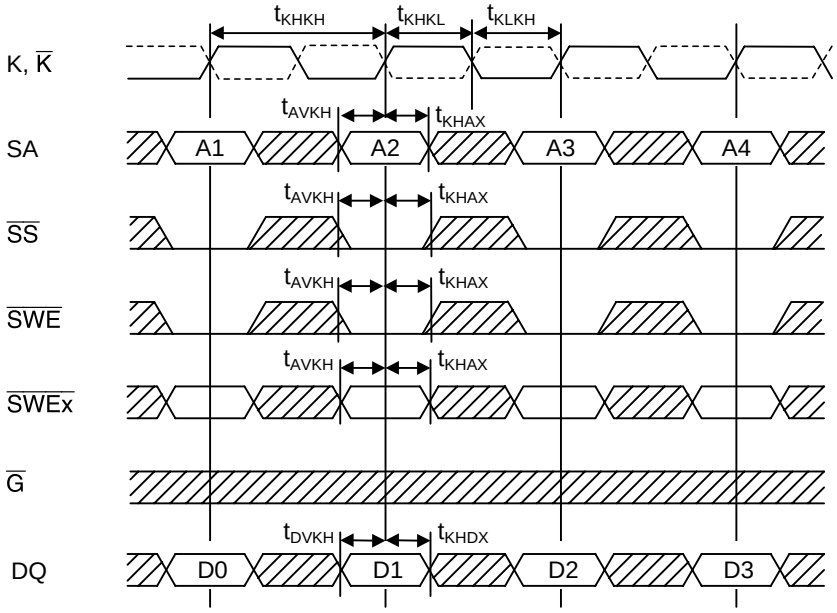
Note: ZZ = V_{IL}

Read Cycle-3 ($\overline{G}$ Controlled)



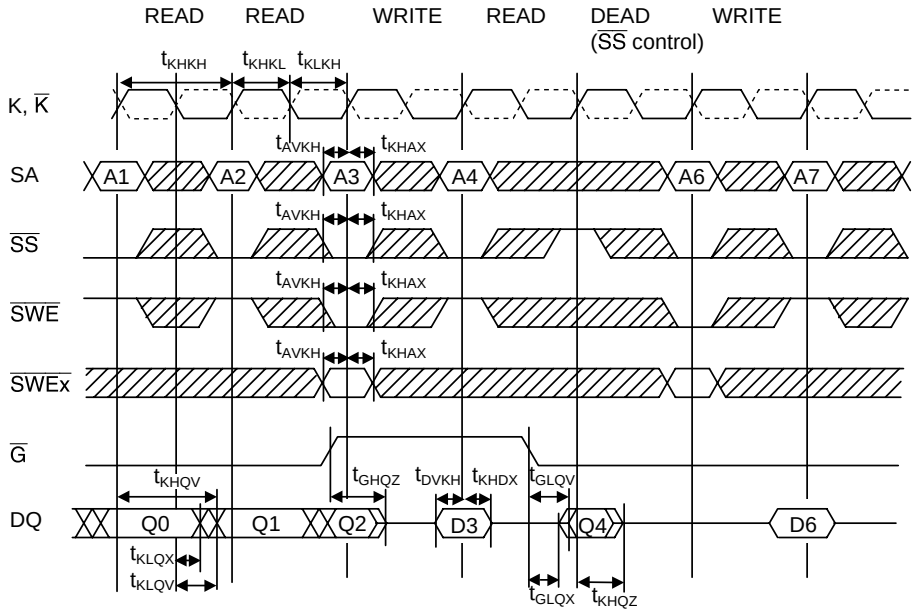
Note: ZZ = V_{IL}

Write Cycle



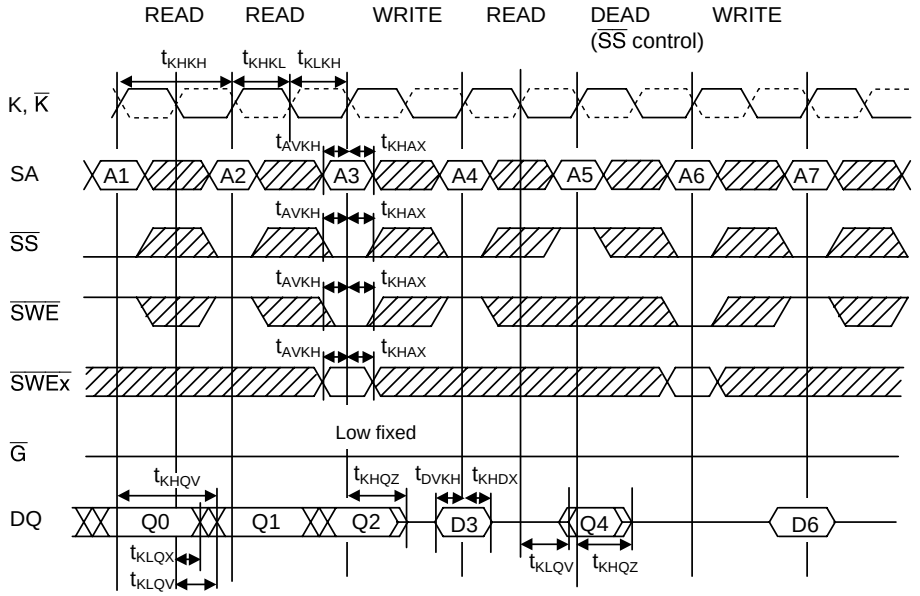
Note: ZZ = V_{IL}

Read-Write Cycle-1



Note: ZZ = V_{IL}

Read-Write Cycle-2



Note: $\overline{G}$, ZZ = V_{IL}
During this period DQ pins are in the output state so that the input signal of opposite phase to the outputs must not be applied.

Input Capacitance

(V_{DD} = 2.5 V, V_{DDQ} = 1.5 V, Ta = +25°C, f = 1 MHz)

Parameter	Symbol	Min	Max	Unit	Pin name	Notes
Input capacitance	C_{IN}	—	4	pF	SAn, SAS, $\overline{SS}$, $\overline{SWE}$, $\overline{SWEx}$	1, 3
Clock input capacitance	C_{CLK}	—	5	pF	K, $\overline{K}$	1, 2, 3
I/O capacitance	C_{IO}	—	5	pF	DQxn	1, 3

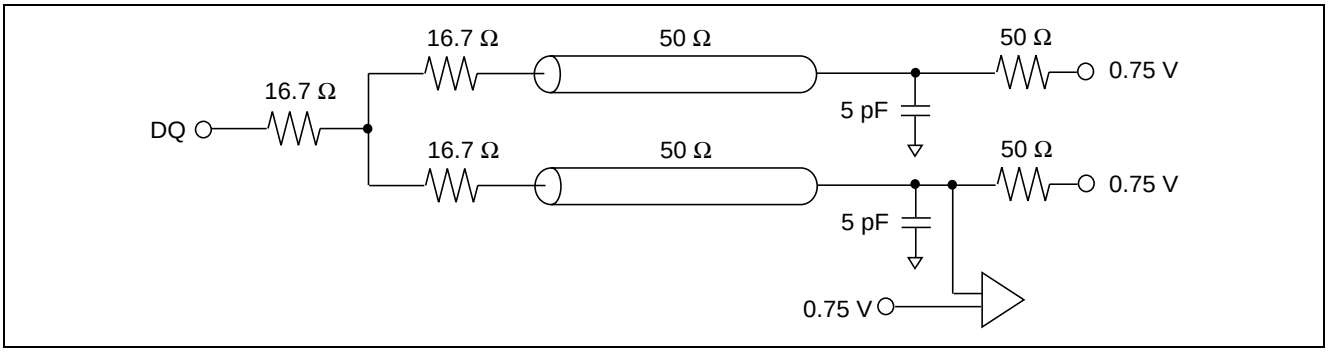
Notes: 1. This parameter is sampled and not 100% tested.
2. Exclude $\overline{G}$
3. Connect pins to GND, except V_{DD}, V_{DDQ}, and the measured pin.

AC Test Conditions

Parameter	Symbol	Conditions		Unit	Note
		Late select mode Late write mode	Register-latch mode		
Input and output timing reference levels	V_{REF}	0.75	0.75	V	
Input signal amplitude	V_{IL}, V_{IH}	0.25 to 1.25	0.25 to 1.25	V	
Input rise / fall time	tr, tf	0.5 (10% to 90%)	0.5 (10% to 90%)	ns	
Clock input timing reference level		Differential cross point	Differential cross point		
V_{DIF} to clock		0.75	0.75	V	
V_{CM} to clock		0.75	1.10	V	
Output loading conditions		See figure below	See figure below		

Note: Parameters are tested with RQ = 250 Ω and V_{DDQ} = 1.5 V.

Output Loading Conditions



Boundary Scan Test Access Port Operations

Overview

In order to perform the interconnect testing of the modules that include this SRAM, the serial boundary scan test access port (TAP) is designed to operate in a manner consistent with IEEE Standard 1149.1 - 1990. But does not implement all of the functions required for 1149.1 compliance. The HM64YLB series contains a TAP controller. Instruction register, boundary scans register, bypass register and ID register.

Test Access Port Pins

Symbol I/O	Name
TCK	Test clock
TMS	Test mode select
TDI	Test data in
TDO	Test data out

Note: This device does not have a TRST (TAP reset) pin. TRST is optional in IEEE 1149.1.
To disable the TAP, TCK must be connected to V_{SS}. TDO should be left unconnected.
To test boundary scan, the ZZ pin needs to be kept below V_{REF} – 0.4 V.

TAP DC Operating Characteristics

(Ta = 0 to +85°C)

Parameter	Symbol	Min	Max	Notes
Boundary scan input high voltage	V_{IH}	1.4 V	3.6 V	
Boundary scan input low voltage	V_{IL}	–0.3 V	0.8 V	
Boundary scan input leakage current	I_{LI}	–10 µA	+10 µA	1
Boundary scan output low voltage	V_{OL}	—	0.2 V	2
Boundary scan output high voltage	V_{OH}	2.1 V	—	3
Boundary scan output leakage current	I_{LO}	–5 µA	+5 µA	4

Notes: 1. $0 \le V_{IN} \le 3.6$ V for all logic input pins
2. I_{OL} = 2 mA at V_{DD} = 2.5 V.
3. I_{OH} = –2 mA at V_{DD} = 2.5 V.
4. $0 \le V_{OUT} \le V_{DD}$, TDO in high-Z

TAP AC Operating Characteristics

(Ta = 0 to +85°C)

Parameter	Symbol	Min	Max	Unit	Note
Test clock cycle time	t_{THTH}	67	—	ns	
Test clock high pulse width	t_{THTL}	30	—	ns	
Test clock low pulse width	t_{TLTH}	30	—	ns	
Test mode select setup	t_{MVTH}	10	—	ns	
Test mode select hold	t_{THMX}	10	—	ns	
Capture setup	t_{CS}	10	—	ns	1
Capture hold	t_{CH}	10	—	ns	1
TDI valid to TCK high	t_{DVTH}	10	—	ns	
TCK high to TDI don't care	t_{THDX}	10	—	ns	
TCK low to TDO unknown	t_{TLQX}	0	—	ns	
TCK low to TDO valid	t_{TLQV}	—	20	ns	

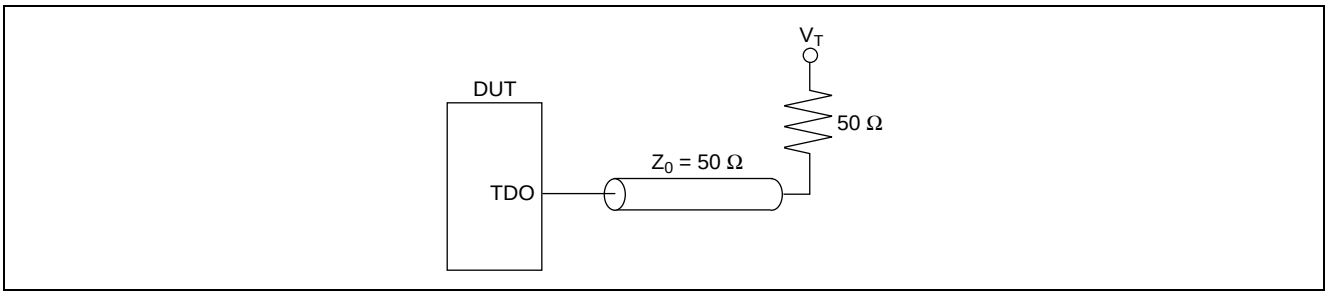
Note: 1. t_{CS} + t_{CH} defines the minimum pause in RAM I/O pad transitions to assure pad data capture.

TAP AC Test Conditions

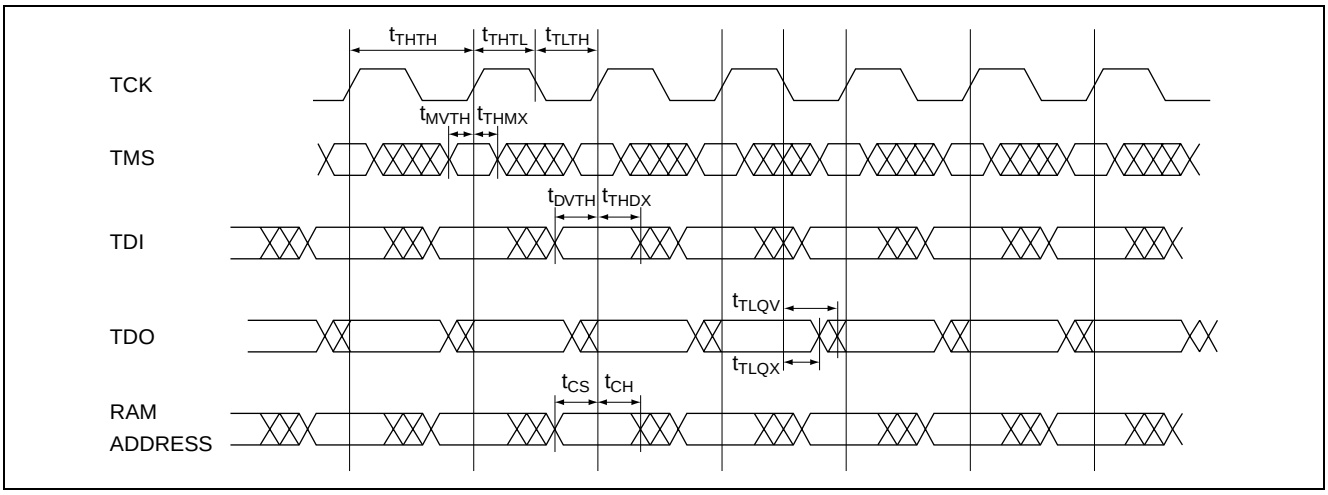
(V_{DD} = 2.5 V)

Temperature	0°C ≤ Ta ≤ +85°C
Input timing measurement reference level	1.1 V
Input pulse levels	0 to 2.5 V
Input rise/fall time	1.5 ns typical (10% to 90%)
Output timing measurement reference level	1.25 V
Test load termination supply voltage (V_T)	1.25 V
Output load	See figure below

Boundary Scan AC Test Load



TAP Controller Timing Diagram



Test Access Port Registers

Register name	Length	Symbol	Note
Instruction register	3 bits	IR [2:0]	
Bypass register	1 bit	BP	
ID register	32 bits	ID [31:0]	
Boundary scan register	70 bits	BS [70:1]	

TAP Controller Instruction Set

IR2	IR1	IR0	Instruction	Operation
0	0	0	SAMPLE-Z	Tristate all data drivers and capture the pad value
0	0	1	IDCODE	
0	1	0	SAMPLE-Z	Tristate all data drivers and capture the pad value
0	1	1	BYPASS	
1	0	0	SAMPLE	
1	0	1	BYPASS	
1	1	0	PRIVATE	Do not use. They are reserved for vendor use only
1	1	1	BYPASS	

Note: This device does not perform EXTEST, INTEST or the preload portion of the PRELOAD command in IEEE 1149.1.

Boundary Scan Order (HM64YLB36512)

Bit #	Bump ID	Signal name
1	5R	M2
2	4P	SAS/SA0
3	4T	SA3
4	6R	SA1
5	5T	SA2

15	7K	DQa1
16	5L	$\overline{\text{SWEa}}$
17	4L	$\overline{\text{K}}$
18	4K	K
19	4F	$\overline{\text{G}}$
20	5G	$\overline{\text{SWEb}}$
21	7H	DQb1
22	6H	DQb0
23	7G	DQb3
24	6G	DQb2
25	6F	DQb4
26	7E	DQb5
27	6E	DQb6
28	7D	DQb7
29	6D	DQb8
30	6A	SA7
31	6C	SA8
32	5C	SA4
33	5A	SA6
34	6B	SA9
35	5B	SA5

Bit #	Bump ID	Signal name
36	3B	SA12
37	2B	SA15
38	3A	SA13
39	3C	SA11
40	2C	SA16
41	2A	SA14
42	2D	DQc8
43	1D	DQc7
44	2E	DQc6
45	1E	DQc5
46	2F	DQc4
47	2G	DQc2
48	1G	DQc3
49	2H	DQc0
50	1H	DQc1
51	3G	$\overline{\text{SWEc}}$
52	4D	ZQ
53	4E	$\overline{\text{SS}}$
54	4G	NC
55	4H	NC
56	4M	$\overline{\text{SWE}}$
57	3L	$\overline{\text{SWEd}}$
58	1K	DQd1
59	2K	DQd0
60	1L	DQd3
61	2L	DQd2
62	2M	DQd4
63	1N	DQd5
64	2N	DQd6
65	1P	DQd7
66	2P	DQd8
67	3T	SA18
68	2R	SA10
69	4N	SA17
70	3R	M1

Notes: 1. Bit#1 is the first scan bit to exit the chip.
2. Bit#2 is SAS in both the late select mode and the late write mode, or is SA0 in the register-latch mode.
3. The NC pads listed in this table are indeed no connects, but are represented in the boundary scan register by a “Place Holder”. Place holder registers are internally connected to V_{SS}.
4. In boundary scan mode, differential input K and $\overline{\text{K}}$ are referenced to each other and must be at the opposite logic levels for the reliable operation.
5. ZZ must remain V_{IL} during boundary scan.
6. In boundary scan mode, ZQ must be driven to V_{DDQ} or V_{SS} supply rail to ensure consistent results.
7. M1 and M2 must be driven to V_{DD}, V_{DDQ} or V_{SS} supply rail to ensure consistent results.

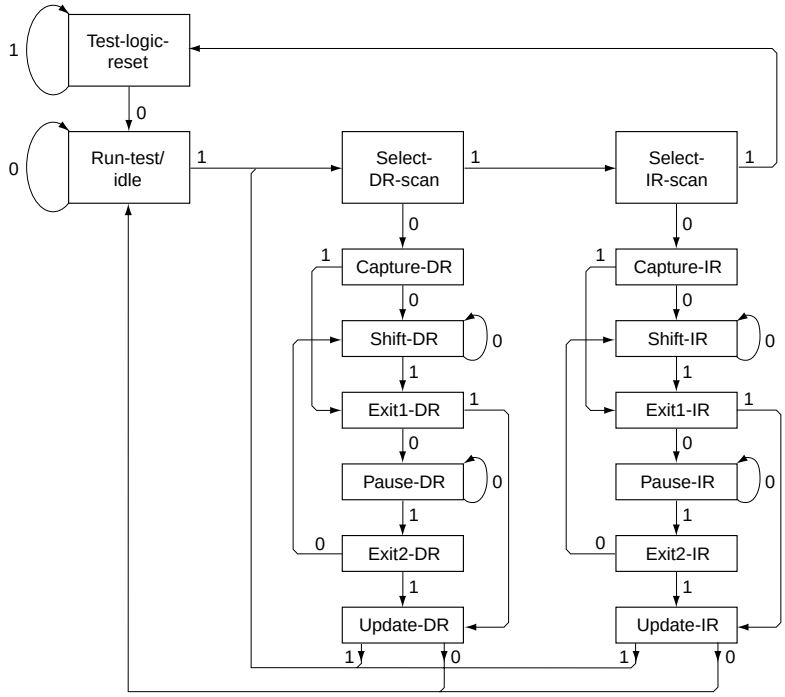
TAP Controller State Diagram



Note: The value adjacent to each state transition in this figure represents the signal present at TMS at the time of a rising edge at TCK.
No matter what the original state of the controller, it will enter Test-logic-reset when TMS is held high for at least five rising edges of TCK.
