TDA1574

FM front-end IC

GENERAL DESCRIPTION

The TDA1574 is a monolithic integrated FM tuner circuit designed for use in the r.f./i.f. section of car radios and home-receivers. The circuit comprises a mixer, oscillator and a linear i.f. amplifier for signal processing, plus the following additional features.

Features

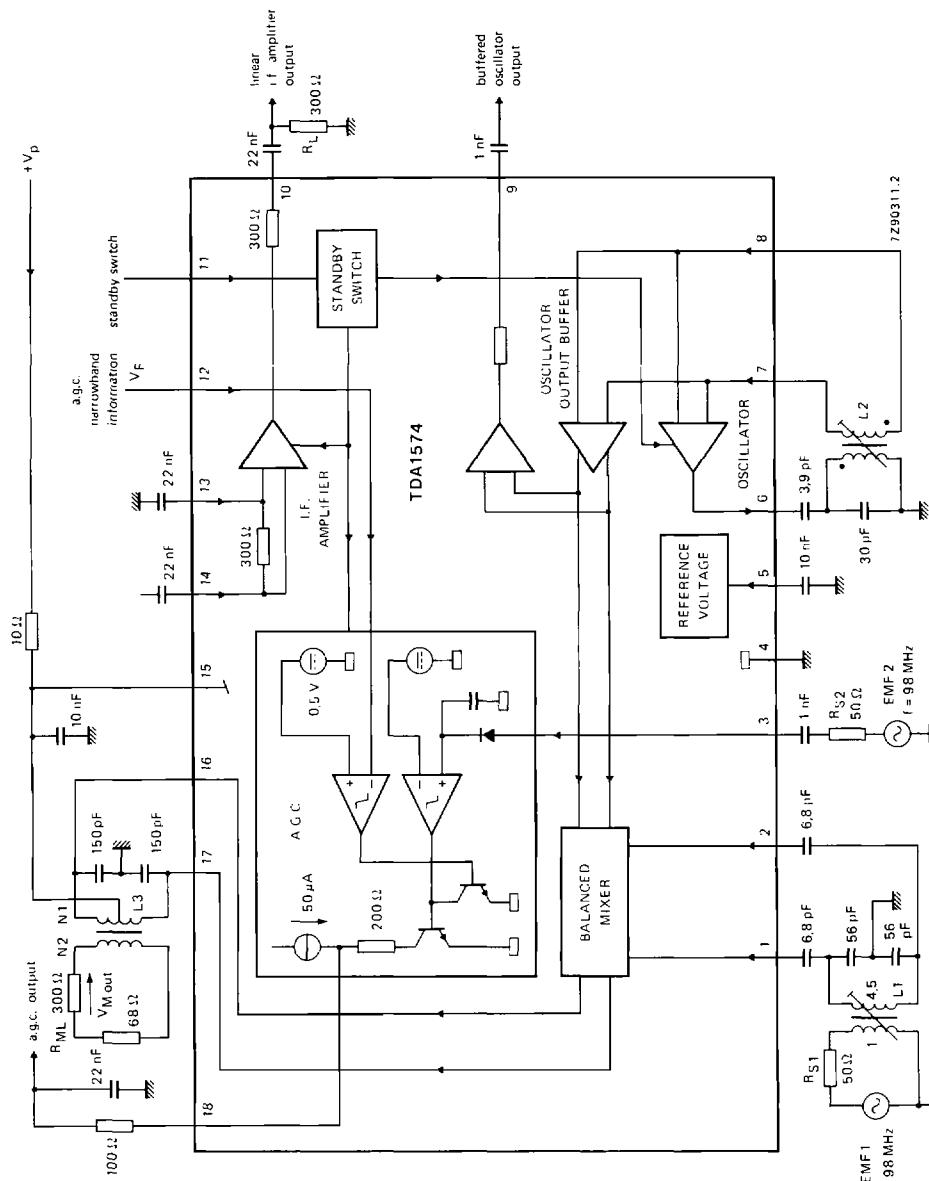

- Keyed automatic gain control (a.g.c.)
- Regulated reference voltage
- Buffered oscillator output
- Electronic standby switch
- Internal buffered mixer driving

FM front-end IC**TDA1574****FUNCTIONAL DESCRIPTION****Mixer**

The mixer circuit is a double balanced multiplier with a preamplifier (common base input) to obtain a large signal handling range and a low oscillator radiation.

Oscillator

The oscillator circuit is an amplifier with a differential input. Voltage regulation is achieved by utilizing the symmetrical tanh-transfer-function to obtain low order 2nd harmonics.

Linear IF amplifier

The IF amplifier is a one stage, differential input, wideband amplifier with an output buffer.

Keyed AGC

The AGC processor combines narrow- and wideband information via an RF level detector, a comparator and an ANDing stage. The level dependent, current sinking output has an active load, which sets the AGC threshold.

The AGC function can either be controlled by a combination of wideband and narrowband information (keyed AGC), or by a wideband information only, or by narrowband information only. If only narrowband AGC is wanted pin 3 should be connected to pin 5. If only wideband AGC is wanted pin 12 should be connected to pin 13.

RATINGS

Limiting values in accordance with the Absolute Maximum System (IEC 134)

Supply voltage (pin 15)	$V_p = V_{15-4}$	max.	18 V
Mixer output voltage (pins 16 and 17)	$V_{16, 17-4}$	max.	35 V
Standby switch input voltage (pin 11)	V_{11-4}	max.	23 V
Reference voltage (pin 5)	V_{5-4}	max.	7 V
Field strength input voltage (pin 12)	V_{12-4}	max.	7 V
Total power dissipation	P_{tot}	max.	800 mW
Storage temperature range	T_{stg}	–55 to + 150	°C
Operating ambient temperature range	T_{amb}	–40 to + 85	°C

THERMAL RESISTANCE

From junction to ambient (in free air)	$R_{th j-amb}$	=	80 K/W
