

SERIES 2060 and 2070 DARLINGTON SWITCHES

These devices are designed for a broad area of interface applications between low level/low current logic systems and high current loads such as relays, solenoids, motors, heaters, incandescent lamps, LED arrays, etc.

The ULN-2061M, ULN-2062M, ULN-2064B, ULN-2065B, and ULN-2067B are open collector versions for high current sinking applications. Each device has built-in suppression diodes for clamping inductive loads. Sustaining voltages to 50 volts (Type ULN-2061M, ULN-2064B, and ULN-2066B) or 80 volts (Type ULN-2062M, ULN-2065B, and ULN-2067B).

The ULN-2068B, ULN-2069B, ULN-2070B, and ULN-2071B consist of 4 common emitter, open collector Darlington switches. Each switch has a built-in suppression diode and is designed to operate with input currents less than $100\mu A$. The ULN-2068B and ULN-2069B operate at a V_{CC} voltage of +5 V; the ULN-2070B and ULN-2071B at +6 V to +15 V. Sustaining voltage is 50 V (ULN-2068B and ULN-2070B) or 80 V (ULN-2069B and ULN-2071B).

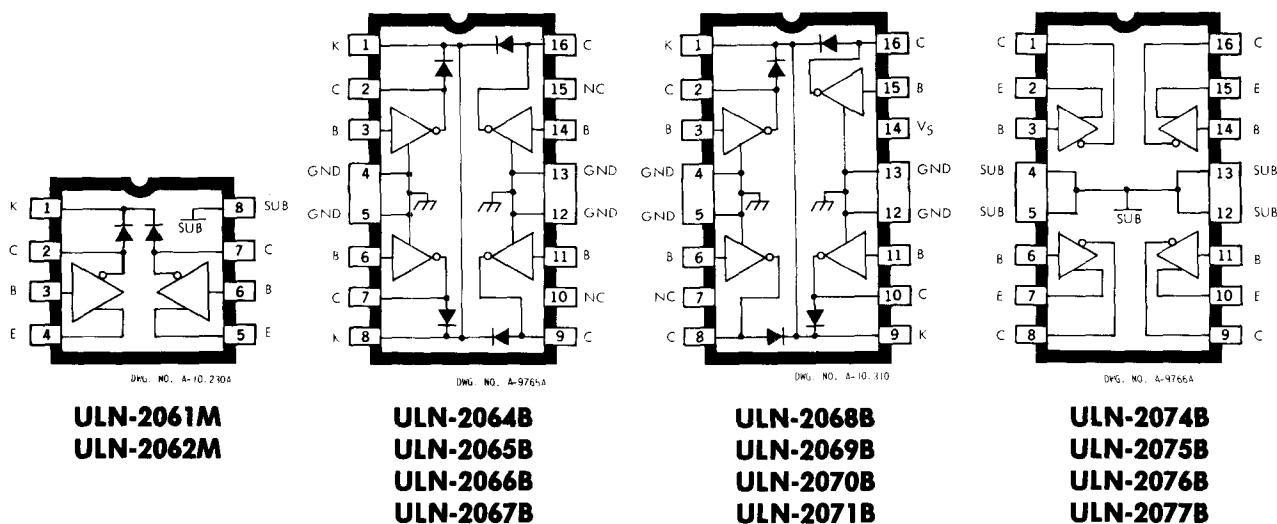

The ULN-2074B, ULN-2075B, ULN-2076B, and ULN-2077B each consist of 4 isolated Darlington switches and are suitable for common collector, emitter-follower applications. Sustaining voltages of 50 V (ULN-2074B and ULN-2076B) or 80 V (ULN-2075B and ULN-2077B).
