

# 5mm Round With Flange Type Blue LED Technical Data Sheet

# Part No: LL-504BC2E-B4-3BC

### Features:

- $\diamond$  Choice of various colors.
- $\diamond$  Available on tape and reel.
- $\diamond$  Reliable and robust.
- $\diamond~$  The product itself will remain within RoHS compliant Version.

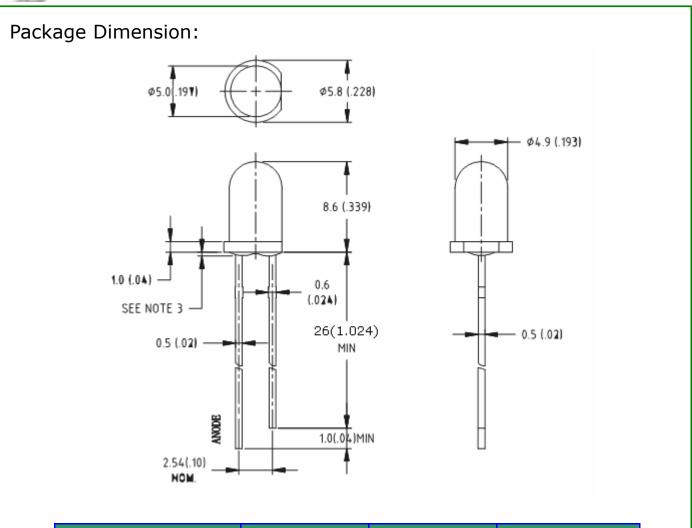

### Descriptions:

- $\diamond$  The series is specially designed for applications requiring higher brightness.
- $\diamond~$  The LED lamps are available with different colors, intensities.

## Applications:

- $\diamond$  TV set.
- ♦ Monitor.
- $\diamond$  Telephone.
- ♦ Computer.
- ♦ Circuit board.
- ♦ Status indicators.
- $\diamond$  Commercial use.
- $\diamond~$  Advertising Signs.
- $\diamond~$  Back lighting.

| Part No.          | Chip Material | Lens Color  | Source Color |
|-------------------|---------------|-------------|--------------|
| LL-504BC2E-B4-3BC | InGaN         | Water Clear | Blue         |

Notes:

- 1. All dimensions are in millimeters (inches).
- 2. Tolerance is  $\pm 0.25$  (.010") mm unless otherwise noted.
- 3. Protruded resin under flange is 1.0 mm (.04") max.
- 4. Specifications are subject to change without notice.

### Absolute Maximum Ratings at Ta=25℃

| Parameters   | Symbol | Max.               | Unit |
|--|--------|--------------------|------|
| Power Dissipation  | PD     | 90                 | mW   |
| Peak Forward Current<br>(1/10 Duty Cycle, 0.1ms Pulse Width) | IFP    | 100                | mA   |
| Forward Current  | IF     | 25                 | mA   |
| Reverse Voltage  | VR     | 5                  | V    |
| Operating Temperature Range                                  | Topr   | -40℃ to +80℃       |      |
| Storage Temperature Range                                    | Tstg   | -40℃ to +85℃       |      |
| Lead Soldering Temperature<br>[4mm (.157") From Body]        | Tsld   | 260℃ for 5 Seconds |      |

### Electrical Optical Characteristics at Ta=25℃

| Parameters                      | Symbol            | Min. | Тур. | Max. | Unit | Test<br>Condition  |
|---------------------------------|-------------------|------|------|------|------|--------------------|
| Luminous Intensity<br>(Note 1)* | IV                | 1700 | 2900 |      | mcd  | IF=20mA            |
| Viewing Angle*                  | 20 <sub>1/2</sub> |      | 15   |      | Deg  | (Note 2)           |
| Peak Emission Wavelength        | λр                |      | 462  |      | nm   | IF=20mA            |
| Dominant Wavelength             | λd                |      | 468  |      | nm   | IF =20mA           |
| Spectrum Radiation Bandwidth    | Δλ                |      | 25   |      | nm   | IF=20mA            |
| Forward Voltage                 | V <sub>F</sub>    | 2.80 | 3.20 | 3.60 | V    | IF=20mA            |
| Reverse Current                 | I <sub>R</sub>    |      |      | 10   | μA   | V <sub>R</sub> =5V |

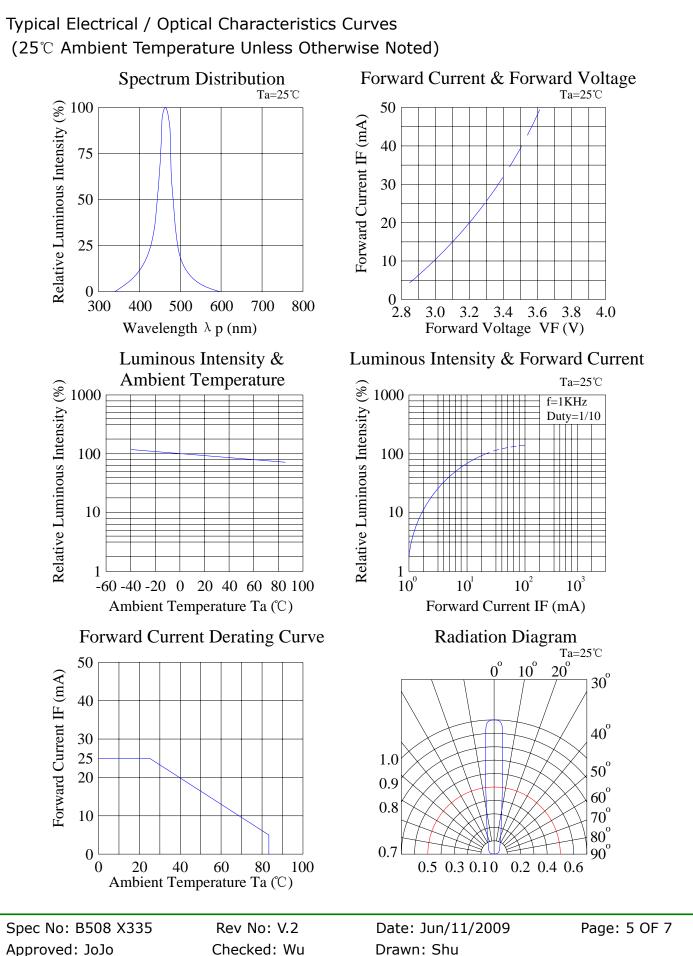

Notes:

1. Luminous Intensity Measurement allowance is  $\pm$  10%.

2.  $\theta_{1/2}$  is the off-axis angle at which the luminous intensity is half the axial luminous intensity.

3. The dominant wavelength ( $\lambda d$ ) is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device.

## Reliability Test Items And Conditions:

The reliability of products shall be satisfied with items listed below:

Confidence level: 90%.

LTPD: 10%.

#### 1) Test Items and Results:

| i) lest items and                                       |                            |  |                         |                      |
|---|----------------------------|--|-------------------------|----------------------|
| Test Item   | Standard<br>Test<br>Method | Test Conditions  | Note                    | Number of<br>Damaged |

## Please read the following notes before using the product:

### 1. Over-current-proof

Customer must apply resistors for protection, otherwise slight voltage shift will cause big current change (Burn out will happen).

#### 2. Storage

- 2.1 Do not open moisture proof bag before the products are ready to use.
- 2.2 Before opening the package, the LEDs should be kept at  $30\,^\circ\!\!{\rm C}$  or less and 90%RH or less.
- 2.3 The LEDs should be used within a year.
- 2.4 After opening the package, the LEDs should be kept at 30  $^\circ\!\!{\rm C}$  or less and 70%RH or less.
- 2.5 The LEDs should be used within 168 hours (7 days) after opening the package.

### 3. Soldering Iron

Each terminal is to go to the tip of soldering iron temperature less than  $260^{\circ}$  for 5 seconds within once in less than the soldering iron capacity 25W. Leave two seconds and more intervals, and do soldering of each terminal. Be careful because the damage of the product is often started at the time of the hand solder.

4. Repairing

Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.

5. Caution in ESD

Static Electricity and surge damages the LED. It is recommended to use a wrist band or anti-electrostatic glove when handling the LED. All devices equipment and machinery must be properly grounded.
