Notes

- For non-standard sizes, lower values or higher power rating requirement, contact factory.

(1) Continuous working voltage shall be $\sqrt{P \times R}$ or maximum working voltage, whichever is less.

(2) Resistance values below 1 GΩ are calibrated at 100 V_{DC}, and values of 1 GΩ and above are calibrated at 1000 V_{DC}. Calibration at other voltages available upon request.

(3) Contact factory for tighter tolerances.

(4) Reference only: Not for all values specified. Consult factory for your size and value.

Notes

(1) Use solder termination N for applications requiring epoxy bondable mounting, and solder terminations D or S for applications requiring solderable mounting.

(2) While not recommended, palladium silver terminations could be used for solderable applications when using a solder alloy containing silver. If the solder paste being used to solder the palladium silver terminated parts to the boards does not have a silver-based composition, then the silver in the terminations could begin to leach when it is exposed to liquidus non-silver-based solders, causing the potential for solderability and/or solder joint issues.

(3) Standard solder plating for the nickel barrier parts are solder terminations E or T. Plated termination F and hot solder dipped terminations D or S are also available.
