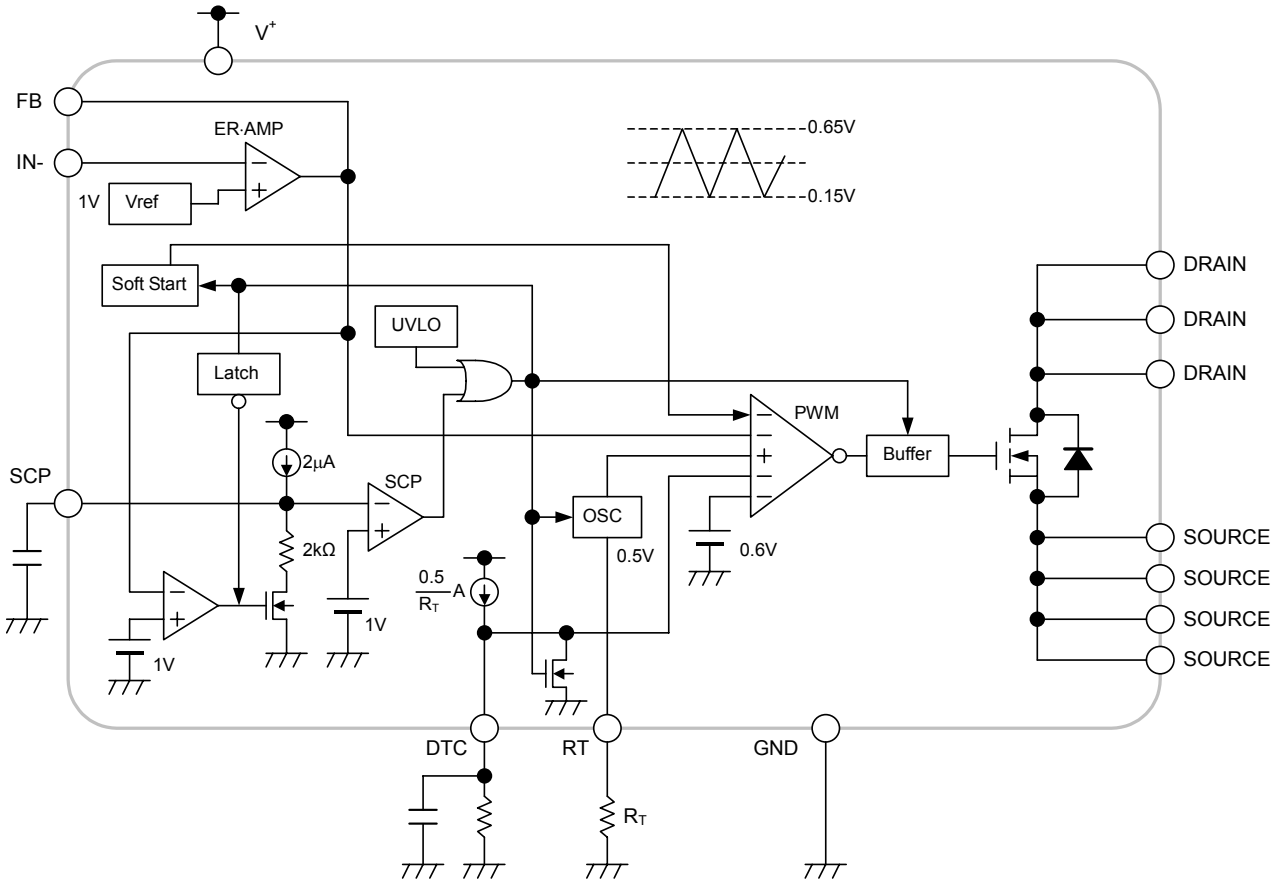
■BLOCK DIAGRAM



- The initial soft start time is 4msec. The soft start time can be adjusted by connecting the capacitor with the DTC pin. The charging current is calculated by $0.5/R_T$.
- The MaxDuty is 90%@700kHz. MaxDuty can be adjusted by connecting resistance with the DTC pin. MaxDuty is calculated by $(R_{DTC} / R_T) \times 86 - 24$.
- The short-circuit protection circuit is a timer latch type. The protection Delay time can be adjusted with the capacitor connected with the SCP pin. To release the latch mode, it should do reclosing the power supply (below the UVLO detection voltage) or the SCP pin down to GND level.
