#### Test Circuit for TTL Output

| Output Load<br>Drive Capability | R <sub>L</sub> Value<br>(Ohms) | C <sub>L</sub> Value<br>(pF) |
|---------------------------------|--------------------------------|------------------------------|
| 10TTL                           | 390                            | 15                           |
| 5TTL                            | 780                            | 15                           |
| 2TTL                            | 1100                           | 6                            |
| 10LSTTL                         | 2000                           | 15                           |
| 1TTL                            | 2200                           | 3                            |

Note 1: An external 0.1µF low frequency tantalum bypass capacitor in parallel with a 0.01µF high frequency ceramic bypass capacitor close to the package ground and V<sub>DD</sub> pin is required.

Note 2: A low capacitance (<12pF), 10X attenuation factor, high impedance (>10Mohms), and high bandwidth (>300MHz) passive probe is recommended.

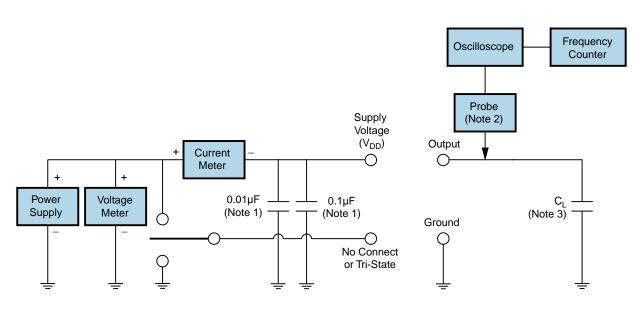

Note 3: Capacitance value  $C_L$  includes sum of all probe and fixture capacitance.

Note 4: Resistance value RL is shown in Table 1. See applicable specification sheet for 'Load Drive Capability'.

Note 5: All diodes are MMBD7000, MMBD914, or equivalent.

#### **Test Circuit for CMOS Output**

Note 1: An external 0.1µF low frequency tantalum bypass capacitor in parallel with a 0.01µF high frequency ceramic bypass capacitor close to the package ground and V<sub>DD</sub> pin is required.

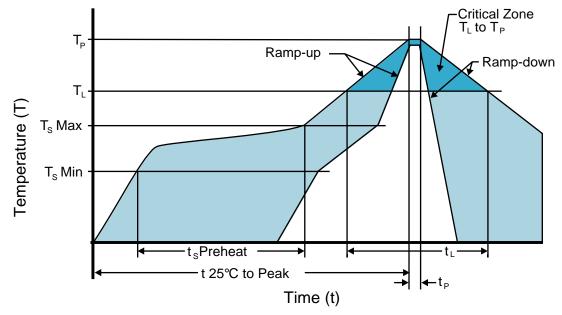

Note 2: A low capacitance (<12pF), 10X attenuation factor, high impedance (>10Mohms), and high bandwidth (>300MHz) passive probe is recommended.

Note 3: Capacitance value  $\dot{C}_1$  includes sum of all probe and fixture capacitance.
