

Low-Ripple, Low-Saturation CMOS Regulators Monolithic IC MM309X, MM310X Series

Outline

This is a voltage regulator IC developed using the CMOS process.

Use of the CMOS process allows low current consumption, and it has superior ripple rejection ratio and transient response compared to conventional CMOS process regulator ICs, making it ideal for use in portable communications devices.

Ceramic capacitors can be used for the output capacitors.

Ideal for small, portable devices as SOT-25 and WLCSP are used for the package.

Features

1. Super low consumption current	45 μ A typ. (when not loaded, excluding the CE terminal current)
2. Super low consumption current (when off)	0.1 μ A typ.
3. High precision output voltage	\pm 2%
4. Output current	150mA
5. Input/output voltage difference	0.23V typ. (I _o =100mA, 3V output)
6. High ripple rejection ratio	80dB typ.
7. Built-in short-circuit restriction circuit	30mA typ.
8. Wide operating temperature range	-30~+85°C
9. Output voltage	1.8~5.0V (0.1V step)

Package

SOT-25, WLCSP-4 (MM309X),
WLCSP-5 (MM310X)

Applications

1. Constant voltage power supply for devices that use batteries
2. Constant voltage power supply for portable communications devices
3. Constant voltage power supply for household electronics products

*Temperature Characteristics: B

(reference example of external parts)

- Output Capacitor Ceramic Capacitor 2.2µF (Output voltage : 2.5~5.0V)
 Ceramic Capacitor 4.7µF (Output voltage : 1.8~2.5V)
- Input Capacitor Ceramic Capacitor 2.2µF

Note

1. The output capacitor is required between output and GND to prevent oscillation.
2. The ESR of capacitor must be defined in ESR stability area.
 It is possible to use a ceramic capacitor without ESR resistance for output.
 The ceramic capacitor must be used more than 2.2µF or 4.7µF and B temperature characteristics.
3. The wire of VCC and GND is required to print full ground plane for noise and stability.
 The input capacitor must be connected a distance of less than 1cm from input pin.
