

SINGLE-CHIP BROADCAST FM RADIO TUNER

Rev.1.1–Aug.2010

1 General Description

The RDA5802H is a new generation single-chip broadcast FM stereo radio tuner with fully integrated synthesizer, IF selectivity and MPX decoder. The tuner uses the CMOS process, support multi-interface and require the least external component. The package size is 4X4mm and is completely adjustment-free. All these make it very suitable for portable devices.

The RDA5802H has a powerful low-IF digital audio processor, this make it have optimum sound quality with varying reception conditions.

The RDA5802H can be tuned to the worldwide frequency band, even support frequency range 50~65MHz.

1.1 Features

- CMOS single-chip fully-integrated FM tuner
- Low power consumption
 - Total current consumption lower than 21mA at 3.0V power supply when under normal situation
- Support worldwide frequency band
 - 50 -108 MHz
- Support flexible channel spacing mode
 - 100KHz, 200KHz, 50KHz and 25KHz
- Digital low-IF tuner
 - Image-reject down-converter
 - High performance A/D converter
 - IF selectivity performed internally
- Fully integrated digital frequency synthesizer
 - Fully integrated on-chip RF and IF VCO
 - Fully integrated on-chip loop filter
- Autonomous search tuning
- Support 32.768KHz crystal oscillator
- Digital auto gain control (AGC)
- Digital adaptive noise cancellation
 - Mono/stereo switch
 - Soft mute
 - High cut
- Programmable de-emphasis (50/75 μ s)
- Receive signal strength indicator (RSSI) and SNR
- Bass boost
- Volume control and mute
- I²S digital output interface
- Line-level analog output voltage
- 32.768 KHz 12M,24M,13M,26M,19.2M,38.4MHz Reference clock
- 2-wire and 3-wire serial control bus interface
- Directly support 32Ω resistance loading
- Integrated LDO regulator
 - 1.8 to 5.5 V operation voltage
- 4X4mm 24 pin QFN package

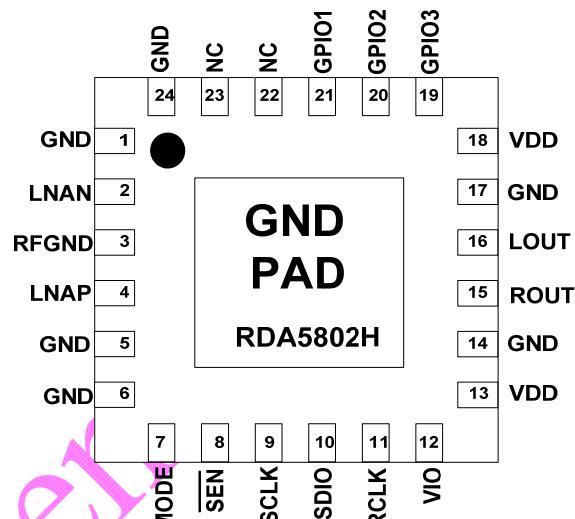

Figure 1-1. RDA5802H Top View

1.2 Applications

- Cellular handsets
- MP3, MP4 players
- Portable radios
- PDAs, Notebook

3 Functional Description

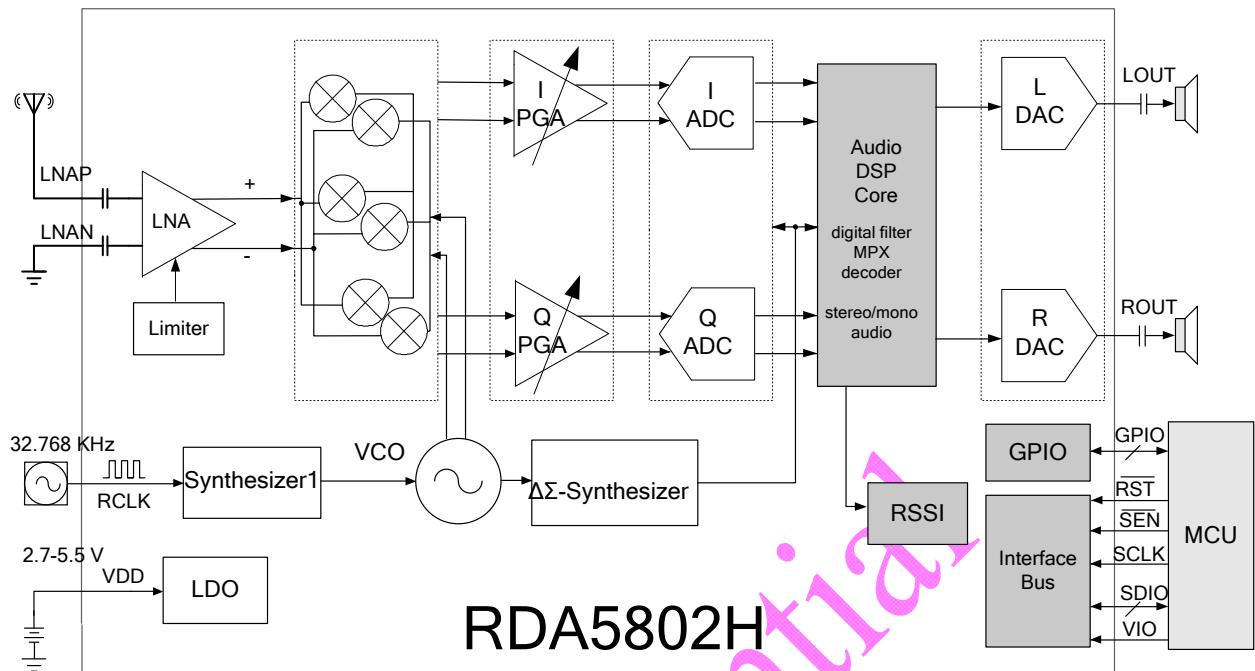

Figure 3-1. RDA5802H FM Tuner Block Diagram

3.1 FM Receiver

The receiver uses a digital low-IF architecture that avoids the difficulties associated with direct conversion while delivering lower solution cost and reduces complexity, and integrates a low noise amplifier (LNA) supporting the FM broadcast band (50 to 108MHz), a multi-phase image-reject mixer array, a programmable gain control (PGA), a high resolution analog-to-digital converters (ADCs), an audio DSP and a high-fidelity digital-to-analog converters (DACs).

The LNA has differential input ports (LNAP and LNAN) and supports any input port by setting according registers bits (LNA_PORT_SEL[1:0]). Its default input common mode voltage is GND.

The limiter prevents overloading and limits the amount of intermodulation products created by strong adjacent channels.

The multi-phase mixer array down converts the LNA output differential RF signal to low-IF, it also has image-reject function and harmonic tones rejection.

The PGA amplifies the mixer output IF signal and

then digitized with ADCs.

The DSP core finishes the channel selection, FM demodulation, stereo MPX decoder and output audio signal. The MPX decoder can automatically switch from stereo to mono to limit the output noise.

The DACs convert digital audio signal to analog and change the volume at same time. The DACs have a low-pass feature and -3dB frequency is about 30 KHz.

3.2 Synthesizer1

The frequency synthesizer 1 generates the local oscillator signal which divides to multi-phase, then be used to downconvert the RF input to a constant low intermediate frequency (IF). The synthesizer reference clock is 32.768 KHz.

The synthesizer frequency is defined by bits CHAN[9:0] with the range from 50MHz to 108MHz.

3.3 Delta-Sigma Synthesizer

The delta-sigma synthesizer generates the constant clock signal to ADCs and DSP.

3.4 Power Supply

The RDA5802H integrated one LDO which supplies power to the chip. The external supply voltage range is 1.8-5.5 V.

3.5 RESET and Control Interface select

The RDA5802H is RESET itself When VIO is Power up. And also support soft reset by trigger 02H BIT1 from 0 to 1. The control interface is select by MODE Pin. The MODE Pin is low, I²C Interface is select. The MODE Pin is set to VIO, SPI Interface is select.

3.6 Control Interface

The RDA5802H supports three- wire and I²C control interface. User could select either of them to program the chip.

The three -wire interface is a standard SPI interface. It includes three pins: SEN, SCLK and SDIO. Each register write is 25-bit long, including 4-bit high register address, a r/w bit, 4-bit low register address, and 16-bit data (MSB is the first bit). RDA5802H samples command byte and data at posedge of SCLK. Each register read is also 25-bit long, including 4-bit high register address, a r/w bit, 4-bit low register address, and 16-bit data (MSB is the first bit) from RDA5802H. The turn around cycle between command byte from MCU and data from RDA5802H is a half cycle. RDA5802H samples command byte at posedge of SCLK, and output data also at posedge of SCLK.

The I²C interface is compliant to I²C Bus Specification 2.1. It includes two pins: SCLK and SDIO. A I²C interface transfer begins with START condition, a command byte and data bytes, each byte has a followed ACK (or NACK) bit, and ends with STOP condition. The command byte includes a 7-bit chip address (00 10000b) and a R/W bit. The ACK (or NACK) is always sent out by receiver. When in write transfer, data bytes is written out from MCU, and when in read transfer, data bytes is read out from RDA 5802H. There is no visible

register address in I²C interface transfers. The I²C interface has a fixed start register address (0x02h for write transfer and 0x0Ah for read transfer), and an internal incremental address counter. If register address meets the end of register file, 0x3Ah, register address will wrap back to 0x00h. For write transfer, MCU programs registers from register 0x02h high byte, then register 0x02h low byte, then register 0x03h high byte, till the last register. RDA5802H always gives out ACK after every byte, and MCU gives out STOP condition when register programming is finished. For read transfer, after command byte from MCU, RDA5802H sends out register 0x0Ah high byte, then register 0x0Ah low byte, then register 0x0Bh high byte, till receives NACK from MCU. MCU gives out ACK for data bytes besides last data byte. MCU gives out NACK for last data byte, and then RDA5802H will return the bus to MCU, and MCU will give out STOP condition.

Details refer to *RDA5802H Programming Guide*.

3.7 I²S Audio Data Interface

The RDA5802H supports I²S (Inter_IC Sound Bus) audio interface. The interface is fully compliant with I²S bus specification. When setting I2SEN bit high, RDA5802H will output SCK, WS, SD signals from GPIO3, GPIO1, GPIO2 as I²S master and transmitter, the sample rate is 48Kbps , 44.1kbps,32kbps..... RDA5802H also support as I²S slaver mode and transmitter, the sample rate is less than 100kbps.

Details refer to *RDA5802H Programming Guide*.

3.8 GPIO Outputs

The RDA5802H has three GPIOs. The function of GPIOs could programmed with bits GPIO1[1:0], GPIO2[1:0], GPIO3[1:0] and I2SEN.

If I2SEN is set to low , GPIO pins could be programmed to output low or high or high-Z, or be programmed to output interrupt and stereo indicator with bits GPIO1[1:0], GPIO2[1:0], GPIO3[1:0]. GPIO2 could be programmed to output a low interrupt (interrupt will be generated only with interrupt enable bit STCIEN is set to high) when seek/tune process completes. GPIO3 could be programmed to output stereo indicator bit ST.

Constant low, high or high-Z functionality is available regardless of the state of VDD supplies or the ENABLE bit.

| LNAN,LNAP | 2,4 | LNA input port. For single-ended input, LNAN should be connected to RFGND |
| RFGND | 3 | LNA ground. Connect to ground plane on PCB |
| MODE | 7 | Control Interface select The MODE Pin is low ,I2C Interface is select. The MODE Pin is set to VIO, SPI Interface is select. |
| SEN | 8 | Latch enable (active low) input for serial control bus |
| SCLK | 9 | Clock input for serial control bus |
| SDIO | 10 | Data input/output for serial control bus |
| RCLK | 11 | 32.768KHz crystal oscillator and reference clock input |
| VIO | 12 | Power supply for I/O |
| VDD | 14/18 | Power supply |
| ROUT,LOUT | 15,16 | Right/Left audio output |
| GPIO1,GPIO2,GPIO3 | 19,20,21 | General purpose input/output |
| NC | 22,23 | No Connect |

Table 8-2 Internal Pin Configuration

| SYMBOL | PIN | DESCRIPTION |
|-------------------|----------|--|
| LNAN/LNAP | 2/4 |  |
| RCLK | 11 |  |
| SCLK/SDIO | 9/10 |  |
| GPIO1/GPIO2/GPIO3 | 19/20/21 |  |

9 Application Diagram

9.1 Audio Loading Resistance Larger than 32Ω & TCXO Application:

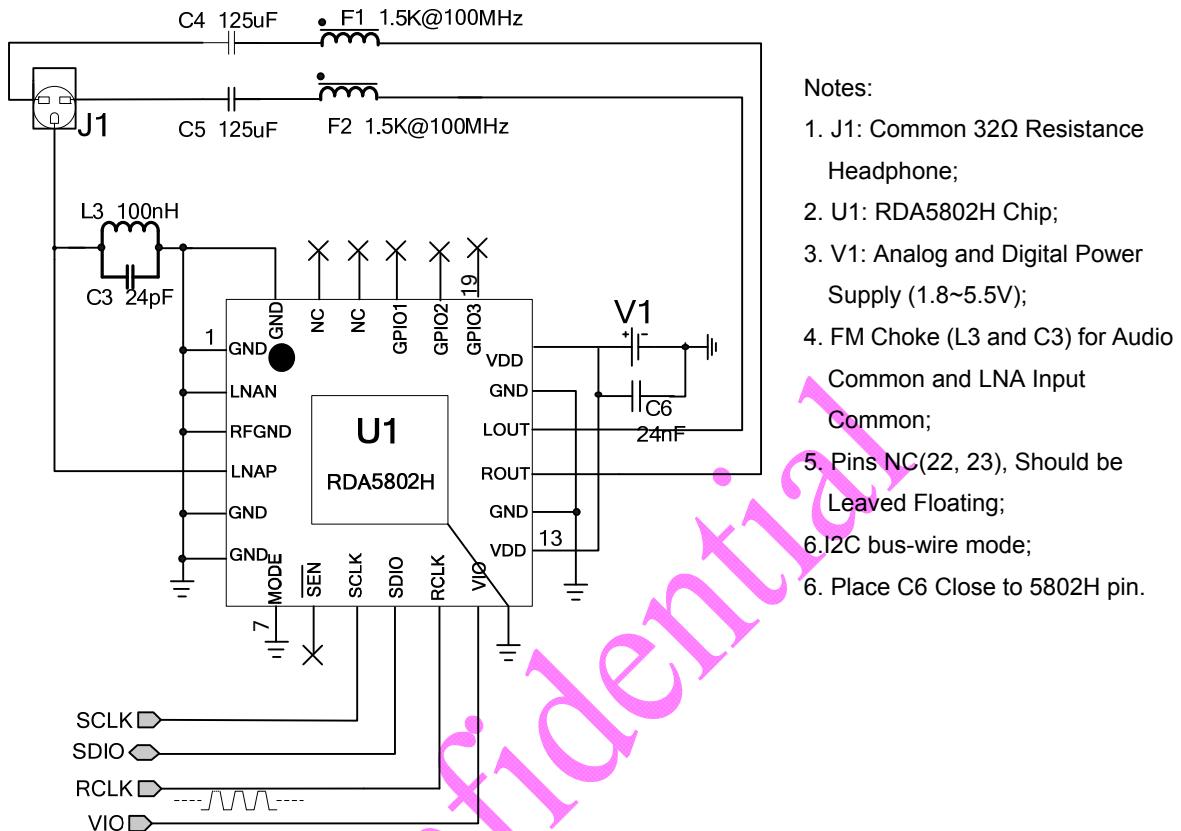

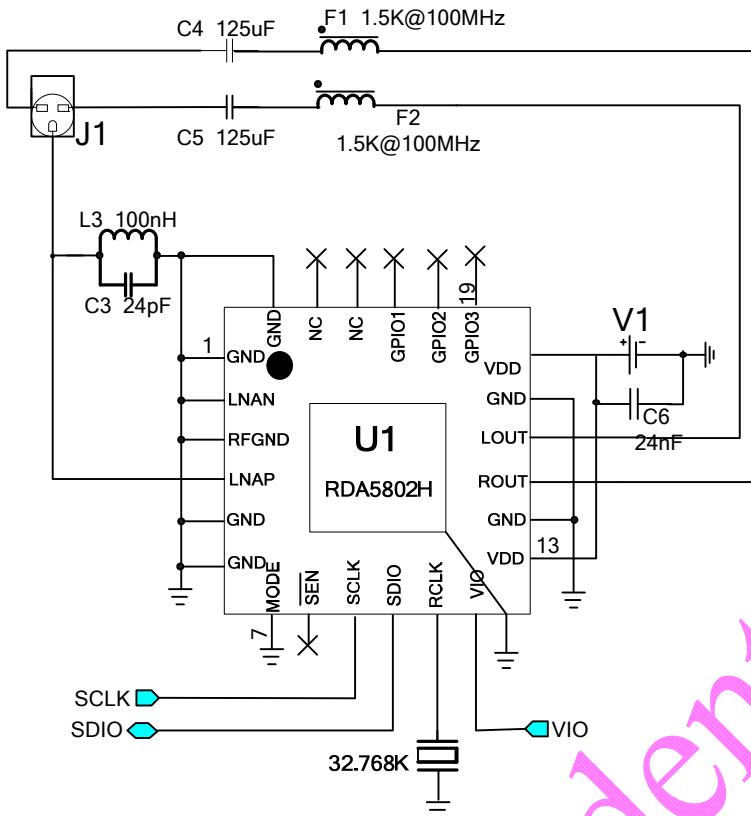

Figure 9-1. RDA5802H FM Tuner Application Diagram (TCXO Application)

9.1.1 Bill of Materials:

| COMPONENT | VALUE | DESCRIPTION | SUPPLIER |
|-----------|-------------|---------------------------------|----------|
| U1 | RDA5802H | Broadcast FM Radio Tuner | RDA |
| J1 | | Common 32Ω Resistance Headphone | |
| L3/C3 | 100nH/24pF | LC Choke for LNA Input | Murata |
| C4,C5 | 125μF | Audio AC Couple Capacitors | Murata |
| C6 | 22nF | Power Supply Bypass Capacitor | Murata |
| F1/F2 | 1.5K@100MHz | FM Band Ferrite | Murata |

9.2 Audio Loading Resistance Lower than 32Ω & DCXO Application:

Notes:

1. J1: Common 32Ω Resistance Headphone
2. U1: RDA5802H Chip
3. V1: Analog and Digital Power Supply (1.8~5.5V)
5. Pins NC(22, 23), Should be Leaved Floating;
6. Set MODE to select control interface(GND—I2C,VIO—SPI);
7. Place C6 Close to 5802H pin

Figure 9-2. RDA5802H FM Tuner Application Diagram (32.768K crystal,I2C bus mode)

9.2.1 Bill of Materials:

| COMPONENT | VALUE | DESCRIPTION | SUPPLIER |
|-----------|-------------|-------------------------------|----------|
| U1 | RDA5802H | Broadcast FM Radio Tuner | RDA |
| J1 | | Audio Amplifier | |
| C4/C5 | 125uF | Audio AC Couple Capacitors | Murata |
| L3/C3 | 100nH/24pF | LC Chock for LNA Input | Murata |
| C6 | 24nF | Power Supply Bypass Capacitor | Murata |
| F1/F2 | 1.5K@100MHz | FM Band Ferrite | Murata |

10 Package Physical Dimension

Figure 10-1 illustrates the package details for the RDA5802H. The package is lead-free and RoHS-compliant.

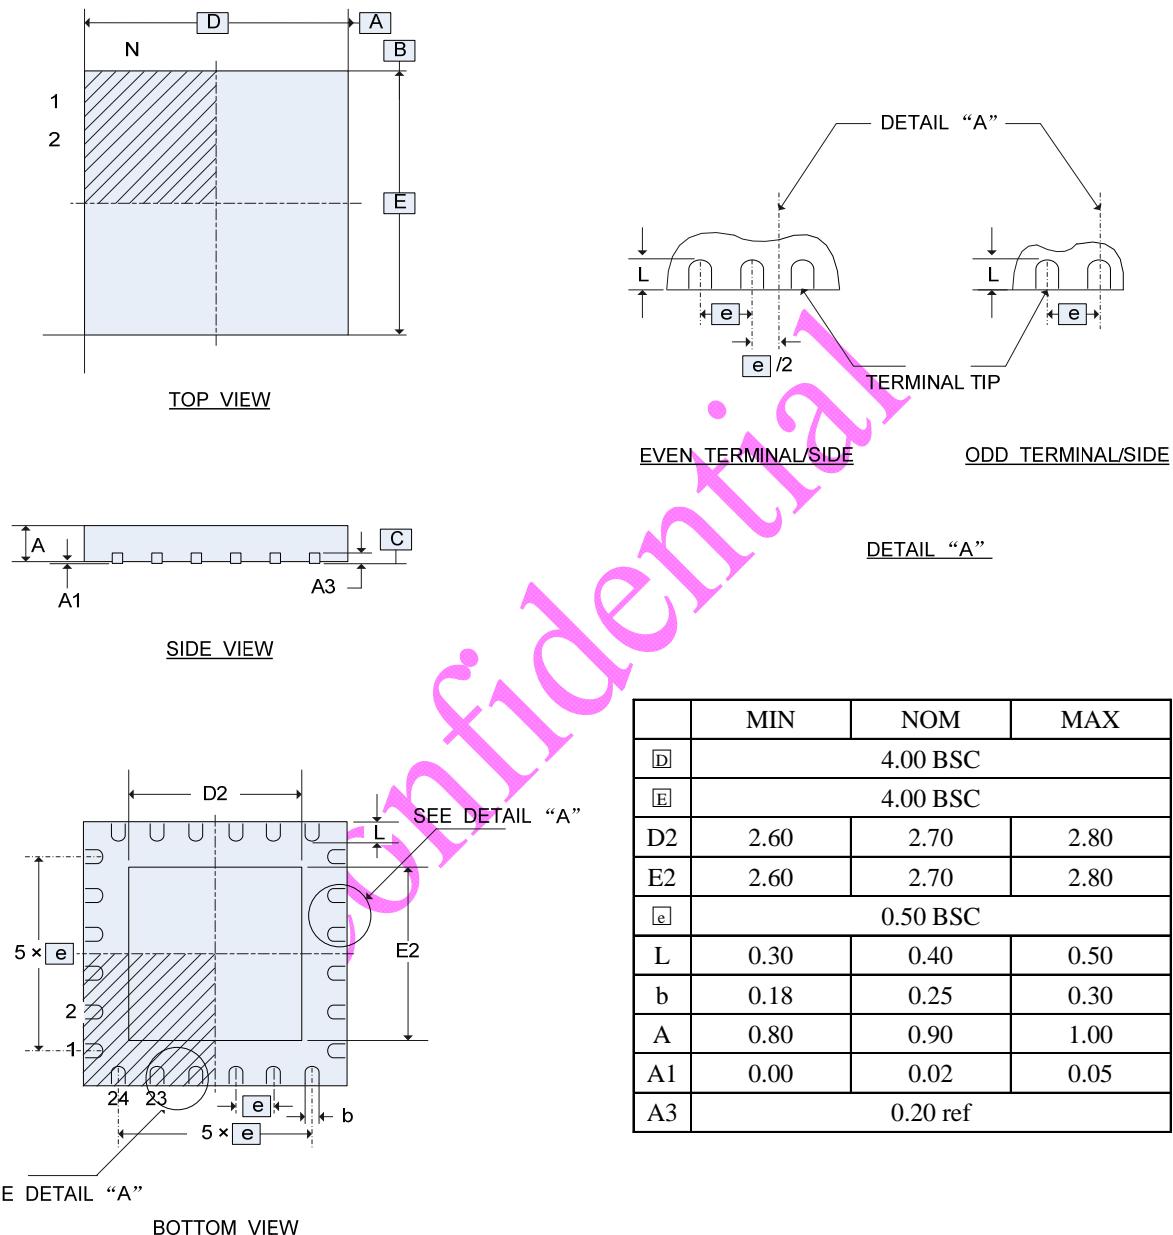

Figure 10-2. 24-Pin 4x4 Quad Flat No-Lead (QFN)

11 PCB Land Pattern

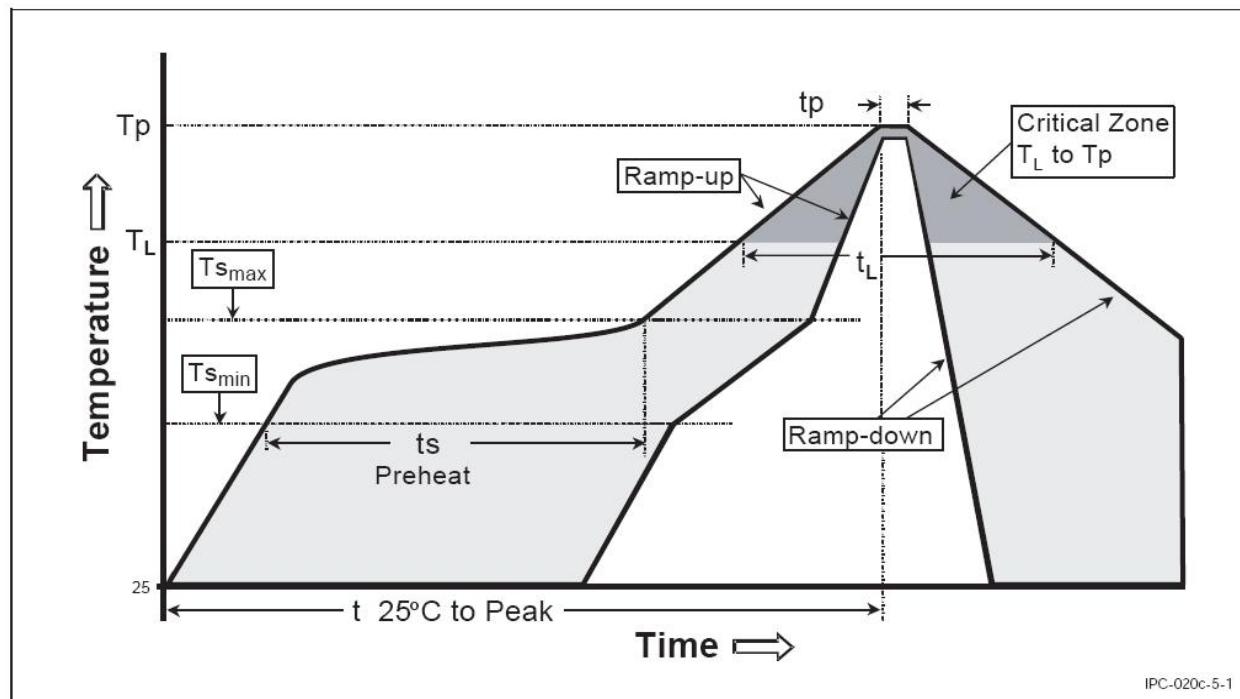

Figure 18. Classification Reflow Profile

| Profile Feature | Sn-Pb Eutectic Assembly | Pb-Free Assembly |
|---|-------------------------|-------------------|
| Average Ramp-Up Rate ($T_{s\max}$ to T_p) | 3 °C/second max. | 3 °C/second max. |
| Preheat | | |
| -Temperature Min ($T_{s\min}$) | 100 °C | 150 °C |
| -Temperature Max ($T_{s\max}$) | 100 °C | 200 °C |
| -Time ($t_{s\min}$ to $t_{s\max}$) | 60-120 seconds | 60-180 seconds |
| Time maintained above: | | |
| -Temperature (T_L) | 183 °C | 217°C |
| -Time (t_L) | 60-150seconds | 60-150 seconds |
| Peak /Classification Temperature(T_p) | See Table-II | See Table-III |
| Time within 5 °C of actual Peak Temperature (t_p) | 10-30 seconds | 20-40 seconds |
| Ramp-Down Rate | 6 °C/second max. | 6 °C/seconds max. |
| Time 25 °C to Peak Temperature | 6 minutes max. | 8 minutes max. |

Table-I Classification Reflow Profiles

| Package Thickness | Volume mm ³ <350 | Volume mm ³ ≥350 |
|-------------------|--------------------------------|--------------------------------|
| <2.5mm | 240 + 0/-5 °C | 225 + 0/-5 °C |
| ≥2.5mm | 225 + 0/-5 °C | 225 + 0/-5 °C |

Table – II SnPb Eutectic Process – Package Peak Reflow Temperatures

| Package Thickness | Volume mm ³ <350 | Volume mm ³ 350-2000 | Volume mm ³ >2000 |
|----------------------|--------------------------------|------------------------------------|---------------------------------|
| <1.6mm | 260 + 0 °C * | 260 + 0 °C * | 260 + 0 °C * |
| 1.6mm – 2.5mm | 260 + 0 °C * | 250 + 0 °C * | 245 + 0 °C * |
| ≥2.5mm | 250 + 0 °C * | 245 + 0 °C * | 245 + 0 °C * |

*Tolerance : The device manufacturer/supplier **shall** assure process compatibility up to and including the stated classification temperature(this mean Peak reflow temperature + 0 °C. For example 260+ 0 °C) at the rated MSL Level.

Table – III Pb-free Process – Package Classification Reflow Temperatures

Note 1: All temperature refer topside of the package. Measured on the package body surface.

Note 2: The profiling tolerance is + 0 °C, - X °C (based on machine variation capability)whatever

is required to control the profile process but at no time will it exceed - 5 °C. The producer assures process compatibility at the peak reflow profile temperatures defined in Table –III.

Note 3: Package volume excludes external terminals(balls, bumps, lands, leads) and/or non integral heat sinks.

Note 4: The maximum component temperature reached during reflow depends on package the thickness and volume. The use of convection reflow processes reduces the thermal gradients between packages. However, thermal gradients due to differences in thermal mass of SMD package may still exist.

Note 5: Components intended for use in a “lead-free” assembly process **shall** be evaluated using the “lead free” classification temperatures and profiles defined in Table-I II III whether or not lead free.

RoHS Compliant

The product does not contain lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE), and are therefore considered RoHS compliant.

ESD Sensitivity

Integrated circuits are ESD sensitive and can be damaged by static electricity. Proper ESD techniques should be used when handling these devices.
