LA71578HM

Monolithic Linear IC
For VHS VCR
Video Audio Signal Processor
(Y/C/A/HA SINGLE-CHIP)

Overview

This LA71578HM is Video Audio Signal Processor for VHS VCR (Y/C/A/HA SINGLE-CHIP).

Specifications

Maximum Ratings at Ta = 25°C

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	V _{CC}	Pins 40, 16, 58, 87, 55, 75	7.0	V
Allowable power dissipation	Pd max	Ta ≤ 65°C *	1400	mW
Operating temperature	Topg		-10 to +65	°C
Storage temperature	Tstg		-40 to +150	°C

* Mounted on a board : 70×70×1.6mm³, paper phenol.

Recommended Operating Conditions at Ta = 25°C

Parameter	Symbol	Conditions	Ratings	Unit
Recommended supply voltage	V _{CC}	Pins 40, 16, 58, 87, 55, 75	5.0	V
Allowable operating voltage range	V _{CC} opg	Pins 40, 16, 58, 87, 55, 75	4.8 to 5.3	V

■ Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment (home appliances, AV equipment, communication device, office equipment, industrial equipment etc.). The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for applications outside the standard applications of our customer who is considering such use and/or outside the scope of our intended standard applications, please consult with us prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.

■ Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

For operating the RF-SW and HA-SW, it's necessary to input the video signal to T20A.
And also confirm the output signal of T28.

Similarly to the case of the PB mode, HA-SW (EP/SP) changeover is synchronized to rise of H-SYNC in the REC mode. Before changeover,

Check by applying the video signal (1Vp-p) to T38A if H-SYNC is correctly output to T28.

(Note1) Apply about 1.8 DC volt to the AGC detection filter pin (pin92) to fix AGC-AMP-GAIN

Note 1. To measure REC-AGC-AMP, C-sync must be fixed to HIGH. Connect T38A, T36A, and T34A of the VIDEO input pin to ground in the REC mode

2. Use a resistor of pin 74 to ground with the accuracy of $\pm 1.0\%$

For to operat the HA-SW, it's necessary to input the video signal to T20A.

And also confirm the output signal of T28.

[PAL/SECAM Discrimination]

As for this IC, PAL/SECAM discrimination operates as below.

- (1) On REC/EE mode, take Hi output when input PAL-GBI signal and Lo output when input SECAM or MESECAM signal. On PB mode, takes Hi output when input PAL-GBI signal, Lo output when input MESECAM signal, and becomes unstable when input SECAM signal. But MESECAM signal when playback both LP and TRICK it takes unstable. And takes unstable all of REC/EE/PB when input PAL-M or PAL-M signal.
- (2) On NAP mode in PB, takes Hi output, and not depend on the kind of input signal.
- (3) In case of non-signal of input, takes high output except for on LP mode when Trick mode.
- (4) On REC/EE mode, takes Hi output when there are no burst or when takes smaller burst than the SPEC which shows below except for the case of above (3).
- (5) On PB mode, takes unstable output when it has smaller burst than the SPEC which shows below except for the case of above (2), (3).
- (6) It is possible to adjust small discrimination characteristics at T73. The side of high output becomes strong in case of increase T73 voltage. T73 has high sensitivity, so that we recommend to add voltage to take regulator voltage as base which receive no influence of V_{CC} changings.
- (7) T69 has high impedance, so that to set leak current lower than a few nA on P board. Insert operation Amp when monitor T69.
- (8) We dare to not recommend to PAL/SECAM discriminate to take as base for T70 voltage because of voltage get to unstable at PB MESECAM signal.

- (*) mark shows initial condition.
- PROHIBIT, () mark shows test mode control. Cannot use their bits, except test mode.
- SLAVE ADDRESS is [1110 001].
- SDA OUT DATA (BIT-8 TO BIT-2): PAL/MESEC DET OUT, SYNC DET OUT, PAL-M DET OUT, KILLER OUT, V-LATCH RESULT (for Group-6), V-LATCH RESULT (for Group-5), ACC-KIL OUT
- This LSI is controlled by auto address increment mode.
- This LSI has V-latch system. (controlled by RF-SW pulse)
V-latch items: Gr5 and Gr6 (all bits)
- *1 BIT 6, 5, 2, 1= 0, 1, 1, 1 (MESECAM MODE)
BIT 6, 5, 2, 1= 1, 0, 1, 1 (SECAM MODE)
- *2 On REC-LNC mode, we recommend LNC-OFF or LNC STANDARD mode.

- SANYO Semiconductor Co.,Ltd. assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein.
- SANYO Semiconductor Co.,Ltd. strives to supply high-quality high-reliability products, however, any and all semiconductor products fail or malfunction with some probability. It is possible that these probabilistic failures or malfunction could give rise to accidents or events that could endanger human lives, trouble that could give rise to smoke or fire, or accidents that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO Semiconductor Co.,Ltd. products described or contained herein are controlled under any of applicable local export control laws and regulations, such products may require the export license from the authorities concerned in accordance with the above law.
