

# **AZ10ELT22**

## **AZ100ELT22**

### **Dual CMOS/TTL to Differential PECL Translator**

---

#### **FEATURES**

- 0.5ns Typical Propagation Delay
- <100ps Typical Output to Output Skew
- Differential PECL Outputs
- Flow Through Pinouts
- Operating Range of 3.0V to 5.5V
- Direct Replacement for ON Semiconductor MC10ELT22 & MC100ELT22

#### **PACKAGE AVAILABILITY**

#### **DESCRIPTION**

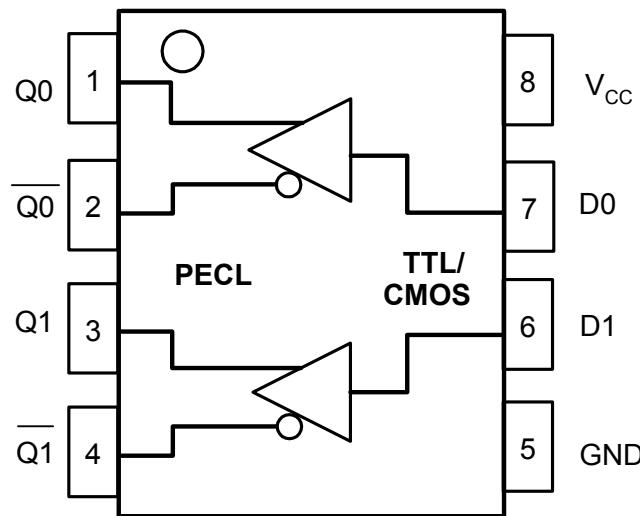

The AZ10/100ELT22 is a dual CMOS/TTL to differential PECL translator. Because PECL (Positive ECL) levels are used, only V<sub>CC</sub> and ground are required. The small outline packaging and the low skew, dual gate design of the ELT22 makes it ideal for applications that require the translation of a clock and a data signal.

The ELT22 is available in both PECL standards: the 10ELT is compatible with PECL 10K logic levels while the 100ELT is compatible with PECL 100K logic levels.

NOTE: Specifications in PECL tables are valid when thermal equilibrium is established.

#### **LOGIC DIAGRAM AND PINOUT ASSIGNMENT**

| PIN DESCRIPTION                           |                           |
|---|---------------------------|
| PIN                                       | FUNCTION                  |
| Q0, $\overline{Q0}$ - Q1, $\overline{Q1}$ | Differential PECL Outputs |
| D0, D1                                    | CMOS/TTL Input            |
| V <sub>CC</sub>                           | Positive Supply           |
| GND                                       | Ground                    |

1. Propagation delay is measured from +1.5V on the input to 50% of the PECL output swing. Input rise/fall times are &lt; 1ns/V.

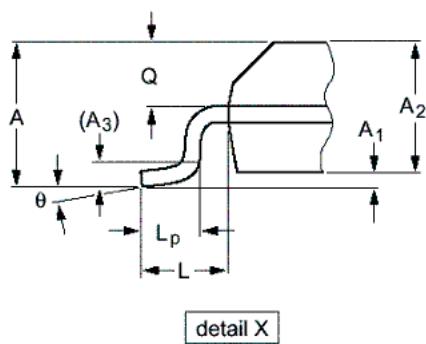

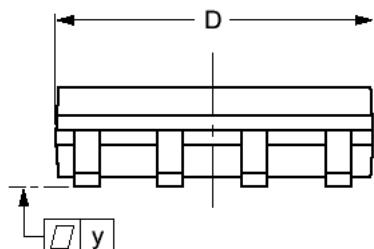

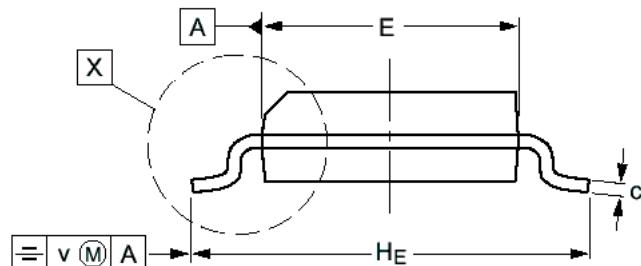

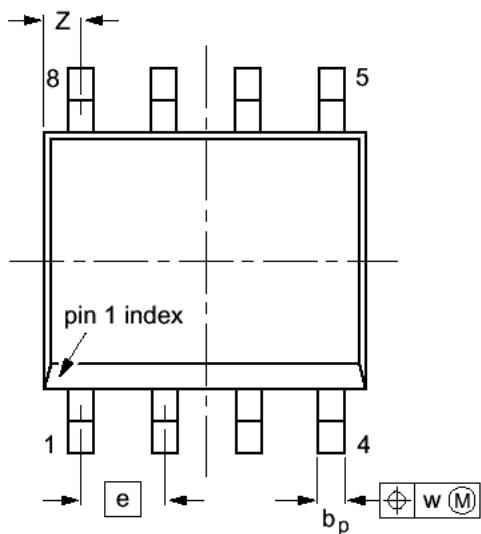

2. Full swing PECL output.

3. Output at -3 dB
