

Poly-Pad® K-10

November 2013

PRODUCT DESCRIPTION

Polyester-Based, Thermally Conductive Insulation Material

FEATURES AND BENEFITS

- Thermal impedance: 0.60°C-in²/W (@50 psi)
- · Polyester based
- For applications requiring non-silicone conformal coatings
- Designed for silicone-sensitive applications
- Excellent dielectric strength and thermal performance

Poly-Pad® K-10 is a composite of film coated with a polyester resin. The material offers superior thermal performance for your most critical applications with a thermal resistance of 0.2°C-in²/W as well as excellent dielectric strength.

Polyester-based, thermally conductive insulators from Bergquist provide a complete family of materials for silicone-sensitive applications. Poly-Pads are ideally suited for applications requiring conformal coatings or applications where silicone contamination is a concern (telecomm and certain aerospace applications). Poly-Pads are constructed with ceramic-filled polyester resins coating either side of a fiberglass carrier or a film carrier. The Poly-Pad® family offers a complete range of performance characteristics to match individual applications.
