The high accuracy space saving design contributes to reduced weight and size of sets

■ Typical Specifications

Items	Specifications		
Rated Voltage	5V DC		
Operating life	50,000 cycles (RDC1010) 200,000 cycles		
Total resistance	1 OkΩ		
Operating temperature range	−30°C to +85°C		

Product Line

Travel (mm)	Travel (mm) Linearity		Length of terminal (mm)	Minimum order unit (pcs.)		Model No.	Drawing No.
		(mm)	(11111)	Japan	Export

14	±0.5%			2,400	4,800	RDC1014A09	
22		4.5	2	2,100	4,200	RDC1022A05	2
32			2	900	1,800	RDC10320RB	
47		4.4		1,000	2,000	RDC1047A03	

Notes

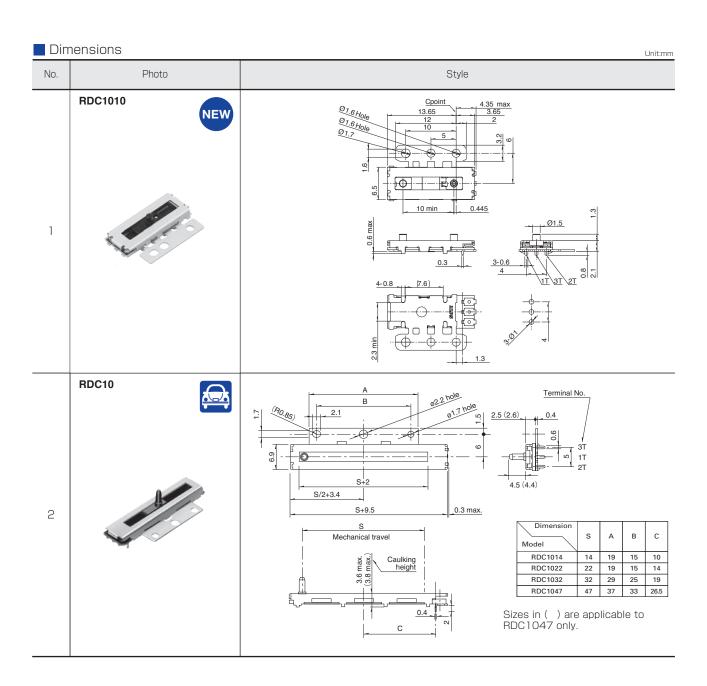

- 1. RDC1014, RDC1022, RDC1032 and RDC1047 Series can be for automotive use.
- 2. RDC1014, RDC1022, RDC1032 and RDC1047 Series are available in different varieties to the above. See Product Varieties (P.474).

Packing Specifications

Resistive Position Sensors / Measurement and Test Methods

Resistive Position Sensor

(Total Resistance)

The total resistance, with the shaft (lever) placed at the end of terminal 1 or 3, shall be determined by measuring the resistance between the resistor terminals 1 and 3 unless otherwise specified.

(Rating Voltage)

The rating voltage corresponding to the rated power shall be determined by the following equation. When the resulting rated voltage exceeds the maximum operating voltage of a specific resistor, the maximum operating voltage shall be taken as the rated voltage.

 $\begin{array}{c} E = \sqrt{P \cdot R} \\ \\ E : \text{Rated voltage (V)} \\ P : \text{Rated power (W)} \\ R : \text{Total nominal resistance (Ω)} \end{array}$

Notes

- 2. \blacksquare Indicates applicability to all products in the series.

Resistive Position Sensors / Soldering Conditions

■ Reference for Manual Soldering

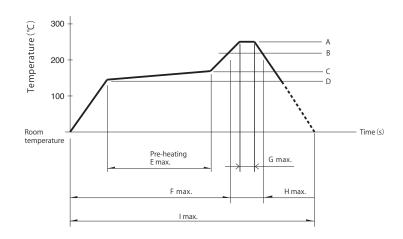

Series	Tip temperature	Soldering time		
RDC50, RDC90, RDC80	350±5℃	3 ⁺¹ ₀ s		
RDC10, RD7	350℃ max.	3s max.		

■ Reference for Dip Soldering

Series	Preheating		Dip so	N. 6 11	
	Soldering surface temperature	Heating time	Soldering temperature	Soldering time	No. of solders
RDC501, RDC502	100 to 150℃	lminute max.	260±5℃	10±1s	1 time
RD7	100°C max.	lminute max.	260℃ max.	5s max.	1 time

Example of Reflow Soldering Condition

- 1. Cleaning Cleaning should not be attempted.
- 2. Type of solder to be used Use cream solder that contains 10 to 15 %wt flux.
- 3. Number of solder applications apply solder only once
- 4. Recommended reflow conditions

Series	А	В	С	D	Е	F	G	Н	ı	No. of reflows
RDC503 RDC506	250℃	230℃	180℃	150℃	2min.	_	5s	40s	4min.	1 time
RDC90	255℃	230℃	_	_	_	2min.	10s	1min.	4min.	1 time
RDC80	250℃	_	180℃	150℃	90±30s	_	10±1s	_	_	1 time

Notes

- When using an infrared reflow oven, solder may not always be applied as intended.
 Be sure to use a hot air reflow oven or a type that uses infrared rays in combination with hot air.
- 2. The temperatures given above are the maximum temperatures at the terminals of the sensor when employing a hot air reflow method. The temperature of the PC board and the surface temperature of the sensor may vary greatly depending on the PC board material, its size and thickness. Ensure that the surface temperature of the sensor does not rise to 250°C or greater.
- 3. Conditions vary to some extent depending on the type of reflow bath used. Be sure to give due consideration to this prior to use.
