

# PolySwitch Resettable Devices

## Line-Voltage-Rated Devices

PolySwitch LVR devices help protect electric motors and transformers used in commercial and home appliances from damage caused by mechanical overloads, overheating, stall, lost neutral and other potentially harmful conditions.

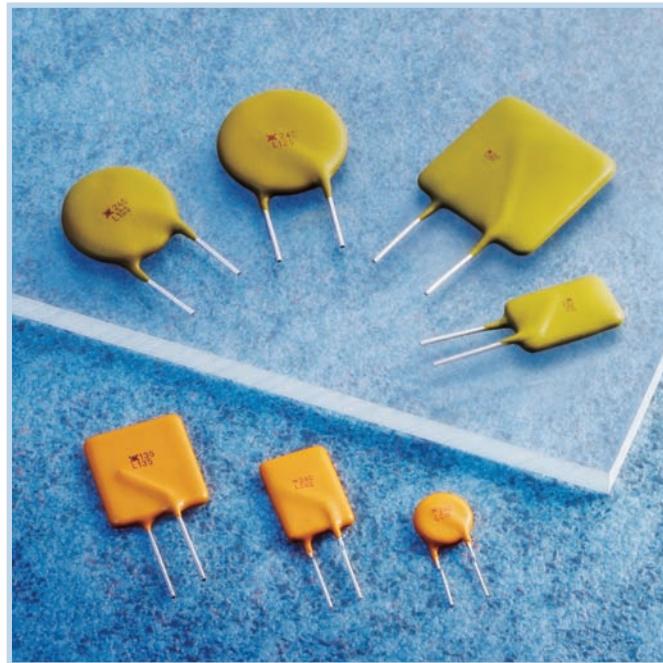

The LVR line voltage product line of polymeric positive temperature coefficient (PPTC) devices includes components that are rated for line voltages of 120V<sub>AC</sub> and 240V<sub>AC</sub>, for up to 2A of operating current at 20°C. They help protect against damage caused by both overcurrent surges and overtemperature faults, offer low resistance, and are compatibly sized with fuse solutions.

Unlike traditional fuses, PolySwitch devices do not require replacement after a fault event. After power has been removed and the overcurrent condition eliminated, the circuit is restored to normal operating condition. Compared to bimetal breakers, they offer greater flexibility, longer lifespan, and lower electromagnetic interference (EMI).

The PolySwitch LVR devices' resettable functionality and latching attributes make them a reliable, cost-effective circuit protection solution for both intermittent- and continuous-operation motor applications. Their low resistance, fast time-to-trip, and low profile help circuit designers provide a safe and dependable product, comply with regulatory agency requirements, and reduce warranty repair costs.

LVR/LVRL series are for line voltage applications up to a continuous operating voltage of 240V<sub>AC</sub>/120V<sub>AC</sub>.

RoHS versions of all products are available.

### Benefits

- Many product choices give engineers more design flexibility
- Compatible with high-volume electronics assembly
- Assist in meeting regulatory requirements
- Higher voltage ratings allow use in new applications

### Features

- Broadest range of radial-leaded resettable devices available in the industry
- Current ratings from 50mA to 2A
- Line voltage rating of 120V<sub>AC</sub> and 240V<sub>AC</sub>
- Agency recognition : UL, CSA, TÜV
- Fast time-to-trip
- Low resistance

### Applications

- |                         |                             |                                   |
|-------------------------|-----------------------------|-----------------------------------|
| • Electromagnetic loads | • Medical equipment         | • Security and fire alarm systems |
| • Game machines         | • Motors, fans and blowers  | • Test and measurement equipment  |
| • Industrial controls   | • POS equipment             | • Transformers                    |
| • Lighting ballast      | • Satellite video receivers | • USB hubs, ports and peripherals |
| • Loudspeakers          |                             |                                   |

**Notes:**

$I_H$  : Hold current: maximum current device will pass without interruption in 20°C still air.

$I_T$  : Trip current: minimum current that will switch the device from low resistance to high resistance in 20°C still air.

$V_{MAX}$  Operating : Maximum continuous voltage device can withstand without damage at rated current.

$V_{MAX}$  Interrupt : Under specified conditions this is the highest voltage that can be applied to the device at the maximum interrupt current.

$I_{MAX}$  Interrupt : Maximum fault current device can withstand without damage at rated voltage.

$P_D$  : Power dissipated from device when in the tripped state in 20°C still air.

$R_{MIN}$  : Minimum resistance of device as supplied at 20°C unless otherwise specified.

$R_{MAX}$  : Maximum resistance of device as supplied at 20°C unless otherwise specified.

$R_{1MAX}$  : Maximum resistance of device when measured one hour post trip at 20°C unless otherwise specified.

\* Electrical characteristics determined at 20°C.

† See Application Limitations on next page.

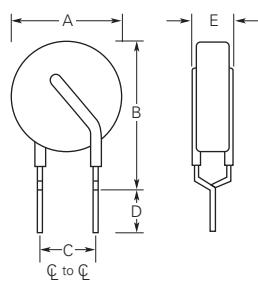

## Warning : Application Limitations for the LVR Product Line

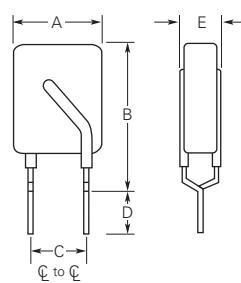

- 1) Users should independently evaluate the suitability of and test each product selected for their own application.
- 2) This product should not be used in an application where the maximum interrupt voltage or maximum interrupt current can be exceeded in a fault condition. Operation beyond the maximum ratings or improper use may result in device damage and possible electrical arcing and flame.
- 3) A PPTC device is not a fuse - it is a nonlinear thermistor that limits current. Under a fault condition all PPTC devices go into a high resistance state but do not open circuit, so hazardous voltage may be present at PPTC locations.
- 4) The devices are intended for protection against damage caused by occasional overcurrent or overtemperature fault conditions and should not be used when repeated fault conditions or prolonged trip events are anticipated.
- 5) In most applications power must be removed and the fault condition cleared in order to reset a PPTC device; however under certain unusual conditions, a PPTC device may automatically reset. PPTC devices should not be used in an application where an automatic reset could create a safety hazard, such as garbage disposals and blenders. Appropriate qualification testing should be performed.
- 6) It is the responsibility of the user to determine the need for back up or failsafe protection to prevent damage that may occur in the event of abnormal function or failure of the PPTC device.
- 7) Operation in circuits with a large inductance can generate a circuit voltage ( $Ldi/dt$ ) above the rated voltage of a PPTC device. This product should not be used in an application where the maximum interrupt voltage or maximum interrupt current can be exceeded by inductive spikes.
- 8) Devices are not recommended for reflow soldering.
- 9) Device performance can be impacted negatively if devices are handled in a manner inconsistent with recommended electronic, thermal, or mechanical procedures for electronic components.
- 10) PPTC devices are not recommended for installation in applications where the device is constrained such that its PTC properties are inhibited, for example in rigid potting materials or in rigid housings, which lack adequate clearance to accommodate device expansion.
- 11) Contamination of the PPTC material with certain silicone-based oils or some aggressive solvents can adversely impact the performance of the devices.

**Table L7 Tape and Reel Specifications for LVR Devices**

LVR devices are available in tape and reel packaging per EIA468-B/IEC60286-2 standards.

See Figures L7 and L8 for details.

Description	EIA Mark	Dimension (mm)	Tolerance
Carrier tape width	W	18	-0.5/+1.0
Hold-down tape width	W <sub>4</sub>	11	Minimum
Top distance between tape edges	W <sub>6</sub>	3	Maximum
Sprocket hole position	W <sub>5</sub>	9	-0.5/+0.75
Sprocket hole diameter	D <sub>0</sub>	4	± 0.2
Abscissa to plane (straight lead) LVR005N to LVR016	H	18.5	± 2.5
Abscissa to plane (kinked lead) LVR005N to LVR016	H <sub>0</sub>	16.0	± 0.5
Abscissa to top LVR005N to LVR016	H <sub>1</sub>	32.2	Maximum
Abscissa to top* LVR025 to LVR055	H <sub>1</sub>	45.0	Maximum
Overall width with lead protrusion LVR005N to LVR016	C <sub>1</sub>	43.2	Maximum
Overall width with lead protrusion LVR025 to LVR055	C <sub>1</sub>	56.0	Maximum
Overall width without lead protrusion LVR005N to LVR016	C <sub>2</sub>	42.5	Maximum
Overall width without lead protrusion LVR025 to LVR055	C <sub>2</sub>	56.0	Maximum
Lead protrusion	L <sub>1</sub>	1.0	Maximum
Protrusion of cut-out	L	11.0	Maximum
Protrusion beyond hold-down tape	I <sub>2</sub>	Not specified	—
Sprocket hole pitch	P <sub>0</sub>	12.7	± 0.3
Device pitch LVR005N to LVR040	—	12.7	± 0.3
Device pitch LVR055	—	25.4	± 0.6
Pitch tolerance	—	20 consecutive	± 1
Tape thickness	t	0.9	Maximum
Overall tape and lead thickness LVR005N to LVR040	t <sub>1</sub>	1.5	Maximum
Overall tape and lead thickness LVR055	t <sub>1</sub>	2.3	Maximum
Splice sprocket hole alignment	—	0	± 0.3
Body lateral deviation	Δh	0	± 1.0
Body tape plane deviation	Δp	0	± 1.3
Ordinate to adjacent component lead	P <sub>1</sub>	3.81	± 0.7
Lead spacing*	F	5.08	+0.75/-0.5
Reel width LVR005N to LVR040	w <sub>2</sub>	56.0	Maximum
Reel width* LVR055	w <sub>2</sub>	63.5	Maximum
Reel diameter	a	370.0	Maximum
Space between flanges* LVR005N to LVR040	w <sub>1</sub>	48.0	Maximum
Space between flanges* LVR055	w <sub>1</sub>	55.0	Maximum
Arbor hold diameter	c	26.0	± 12.0
Core diameter*	n	91.0	Maximum
Box	—	64/372/362	Maximum
Consecutive missing places	—	None	—
Empty places per reel	—	0.1%	Maximum

\*Differs from EIA specification.

**Figure L7** EIA Referenced Taped Component Dimensions for LVR Devices

**Figure L8** EIA Referenced Reel Dimensions for LVR Devices

### Part Numbering System for LVR Devices

LVR 075 S 2

**Packaging**

- Blank = Packaged in bags
- 1 = 25.4mm (1.0 inch) minimum lead length
- 2 = Tape and reel
- X.X = Special lead cut length (inch)

**Modifier**

- K = Standard kinked lead
- S = Straight lead

**Hold Current Indicator**
**Product Series**

- LVR = 240V rated
- LVRL = 120V rated
