# Agilent HLMP-CE15, HLMP-CE16, HLMP-CE23, HLMP-CE24, HLMP-CE30, HLMP-CE31 T-1 3/4 (5 mm) Precision Optical Performance InGaN Bluish-Green LED Lamps

## Data Sheet

### Description

These high intensity bluish-green LEDs are based on InGaN material technology. InGaN is the most efficient and cost effective material for LEDs in the blue and green region of the spectrum. The 505 nm typical dominant wavelength matches international specifications for green traffic signals.

These LED lamps are untinted, nondiffused, T-1 3/4 packages incorporating second generation optics producing well defined spatial radiation patterns at specific viewing cone angles.

These lamps are made with an advanced optical grade epoxy, offering superior temperature and moisture resistance in outdoor signal and sign applications. The package epoxy contains both UV-a and UV-b inhibitors to reduce the effects of long term exposure to direct sunlight.

These lamps are available in three viewing angle options and two package options to give the designer flexibility with optical design and device mounting.

### Features

- Smooth, consistent spatial radiation patterns
- High luminous output
- Viewing angles 15°, 23°, and 30°
- Superior resistance to moisture

### Benefits

- Viewing angles match traffic signal requirements
- Superior performance in outdoor environments
- Suitable for autoinsertion onto PC boards

### Applications

- Traffic signals
- Railroad signals
- Commercial outdoor signs
- Automotive interior lights

**CAUTION:** HLMP-CExx LEDs are Class 1 ESD sensitive. Please observe appropriate precautions during handling and processing. Refer to Agilent Application Note AN-1142 for additional details.

### Notes:

1. The luminous intensity is measured on the mechanical axis of the lamp package.
2. The optical axis is closely aligned with the package mechanical axis.
3. The dominant wavelength,  $\lambda_d$ , is derived from the CIE Chromaticity Diagram and represents the perceived color of the device.
4. All InGaN LEDs represented here are IEC825 Class 2. See Application Brief 1-009 and 1-015 for details.
5. Tolerance for intensity limit is  $\pm 15\%$ .
