## MAXIMUM RATINGS

Junction and Storage Temperatures:  $-65^{\circ}\text{C}$  to  $+175^{\circ}\text{C}$

DC Power Dissipation: 1 Watt

Derating:  $12.5 \text{ mW}/^{\circ}\text{C}$  above  $T_L 95^{\circ}\text{C}$

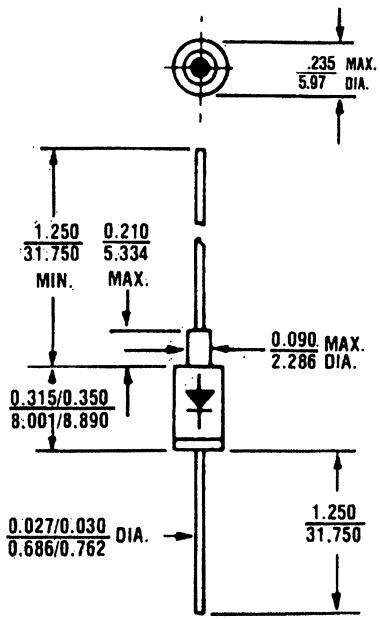

Forward Voltage @ 200 mA: 1.5 Volts

## \* ELECTRICAL CHARACTERISTICS @ $25^{\circ}\text{C}$

\*JEDEC Registered Data. †Not JEDEC Data.

- NOTES:
- When using JEDEC numbers, B suffix signifies  $\pm 5\%$  tolerance on nominal zener voltage. The suffix A is used to identify  $\pm 10\%$  tolerance; no suffix indicates  $\pm 20\%$  tolerance; suffix C is used to identify  $\pm 2\%$ ; and suffix D is used to identify  $\pm 1\%$  tolerance.
  - Zener Voltage ( $V_z$ ) is measured with junction in thermal equilibrium with still air at a temperature of  $25^{\circ}\text{C}$ . The test currents ( $I_{zT}$ ) at nominal voltages provide a constant 0.25 watts.
  - The zener impedance is derived when a 60 cycle ac current having an rms value equal to 10% of the dc zener current ( $I_{zT}$  or  $I_{zK}$ ) is superimposed on  $I_{zT}$  or  $I_{zK}$ . Zener impedance is measured at 2 points to ensure a sharp knee on the breakdown curve and to eliminate unstable units. See MicroNote 202 for variation in dynamic impedance with different zener currents.
  - These values of  $I_{zm}$  may often be exceeded in the case of individual diodes. The values shown are calculated for a unit at the high voltage end of its tolerance range. Allowance has also been made for the rise in zener voltage above  $V_z$  that results from zener impedance and the increase in junction temperature as a unit approaches thermal equilibrium at a dissipation of 1 watt. The  $I_{zm}$  values shown for  $\pm 5\%$  tolerance units may be used with little error for  $\pm 10\%$  tolerance units, but should be reduced by 7% to include a  $\pm 20\%$  tolerance unit near the high voltage end of its tolerance range.

All dimensions in  $\frac{\text{INCH}}{\text{m.m.}}$

**DO-13 (DO-202AA)**

**MECHANICAL  
CHARACTERISTICS**

**CASE:** DO-13 (DO-202AA),  
welded, hermetically sealed metal  
and glass. Also available in glass DO-41.

**FINISH:** All external surfaces are  
corrosion resistant and leads  
solderable.

**THERMAL RESISTANCE:**  $50^{\circ}\text{C}/\text{W}$   
(Typical) junction to lead at  $0.375$ -  
inches from body and  $30^{\circ}\text{C}/\text{W}$  at  
junction to case.

**POLARITY:** Cathode connected case.

**WEIGHT:** 1.4 grams.

**MOUNTING POSITION:** Any
