

VOIDLESS-HERMETICALLY SEALED SURFACE MOUNT FAST RECOVERY GLASS RECTIFIERS

Qualified per MIL-PRF-19500/411

*Qualified Levels:
JAN, JANTX, JANTXV
and JANS*

DESCRIPTION

This "fast recovery" rectifier diode series is military qualified and is ideal for high-reliability applications where a failure cannot be tolerated. These industry-recognized 3.0 amp rated rectifiers for working peak reverse voltages from 50 to 600 volts are hermetically sealed with voidless-glass construction using an internal "Category 1" metallurgical bond. These devices are also available in axial-leaded packages for thru-hole mounting. Microsemi also offers numerous other rectifier products to meet higher and lower current ratings with various recovery time speed requirements including fast and ultrafast device types in both through-hole and surface mount packages.

Important: For the latest information, visit our website <http://www.microsemi.com>.

MAXIMUM RATINGS

- Notes:**
- Derate linearly at 22 mA/°C for $55\text{ °C} \leq T_A \leq 100\text{ °C}$.
 - Above $T_A = 100\text{ °C}$, derate linearly at 26.7 mA/°C to zero at $T_A = 175\text{ °C}$.
 - These ambient ratings are for PC boards where thermal resistance from mounting point to ambient is sufficiently controlled where $T_{J(max)}$ does not exceed 175 °C.

SYMBOLS & DEFINITIONS

Symbol	Definition
V_{BR}	Minimum Breakdown Voltage: The minimum voltage the device will exhibit at a specified current.
V_{RWM}	Working Peak Reverse Voltage: The maximum peak voltage that can be applied over the operating temperature range excluding all transient voltages (ref JESD282-B).
I_O	Average Rectified Output Current: The Output Current averaged over a full cycle with a 50 Hz or 60 Hz sine-wave input and a 180 degree conduction angle.
V_F	Maximum Forward Voltage: The maximum forward voltage the device will exhibit at a specified current.
I_R	Maximum Reverse Current: The maximum reverse (leakage) current that will flow at the specified voltage and temperature.
t_{rr}	Reverse Recovery Time: The time interval between the instant the current passes through zero when changing from the forward direction to the reverse direction and a specified decay point after a peak reverse current occurs.
