

Surface Mount High Pass Filter

RHP-700+

50Ω 700 to 3000 MHz

The Big Deal

- Low insertion loss
- High rejection
- Good return loss

CASE STYLE: GP1212

Product Overview

RHP-700+ is a 50Ω high pass filter fabricated using SMT technology. This high pass filter covers from 700-3000 MHz. This filter is built with high Q capacitors and air-coil inductors for superior performance. This filter is developed for square kilometer array telescope systems for radio astronomy. It has repeatable performance across lots and consistent performance across temperature.

Key Features

Feature	Advantages
Low insertion loss	Can be used in high performance applications such as radio astronomy.
Good rejection	This enables the filter to attenuate spurious signals and reject harmonics for broad frequency band.
Small size, 0.35" x 0.35" x 0.15"	The small surface mount package enables the RHP-700+ to be used in compact designs.
