EV8049S-U-00A

24V 5.5A Quad Channel Power Half-Bridge Evaluation Board

The Future of Analog IC Technology

GENERAL DESCRIPTION

The EV8049S-U-00A is the evaluation board for the MP8049S, a high current, quad channel power half-bridge. It accepts PWM modulated inputs for operation that that can be configured as the stereo BTL output stage of a Class-D audio amplifier.

The MP8049S features a low current shutdown mode, standby mode, input under voltage protection, current limit, thermal shutdown and fault flag signal output. All channels of drivers interface with standard logic signals.

The MP8049S is available in a 40 lead QFN 5X5 package.

ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Supply Voltage	V_{DD}	5 – 26	V
Peak Output Current	I_{PEAK}	5.5	A

FEATURES

- 5V to 26V VDD
- ±5.5A Peak Current Output
- Up to 1MHz Switching Frequency
- Protected Integrated Power 0.14Ω Switches
- 10ns Switch Dead Time
- All Switches Current Limited
- Internal Under Voltage Protection
- Internal Thermal Protection
- Short-circuit Protection
- Fault Output Flag
- Bridge Tied Load Output Power: 37W/Channel at 24V, 8Ω Applications

APPLICATIONS

- Flat TV
- Home Theaters
- DVD Receivers

EV8049S-U-00A EVALUATION BOARD

QUICK START GUIDE

The EV8049S-U-00A comes pre-configured to operate as a stereo BTL (Bridge-Tied Load) audio power driver, where a complementary PWM modulated audio signal (PWM and $\overline{PWM}$) is used an input, and music is played to speakers connected to the outputs. Please follow the steps in the Quick Start Guide for Stereo BTL Operation section.

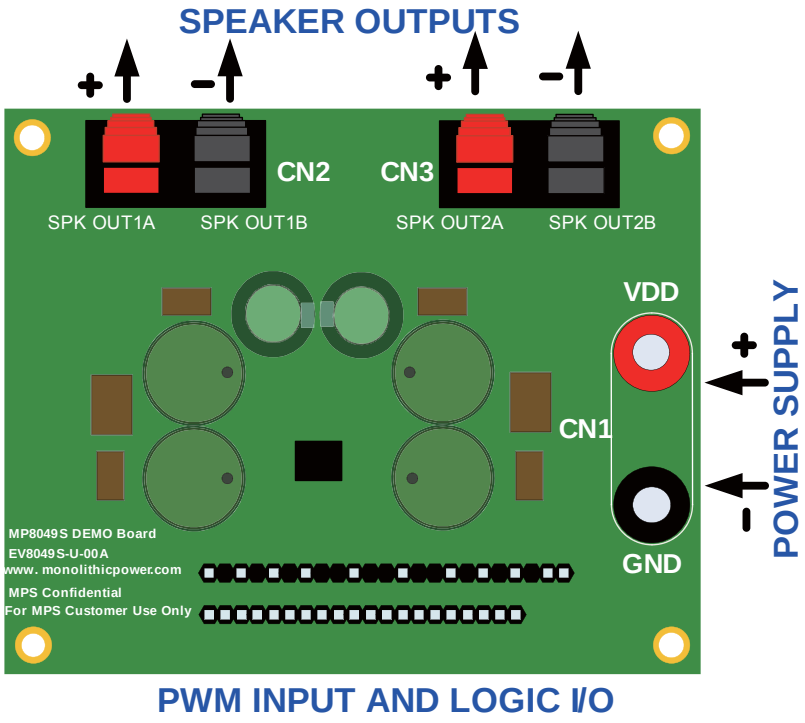

Figure 3 EV8049S-U-00A Connection Diagram

Quick Start Guide for Stereo BTL Operation

Input/Output Requirements

1. Power supply (CN1): 5V to 26V.
2. Complementary PWM Signal Source (PWM, $\overline{PWM}$).
3. Speaker Load (CN2 and CN3): 6Ω to 8Ω.

Setup Condition for Operation

4. Connect the speakers between SPK_OUT1A and SPK_OUT1B, SPK_OUT2A and SPK_OUT2B terminals.
5. Connect a PWM signal source to PWM1A / PWM2A and the complementary signal source $\overline{PWM}$ to PWM1B / PWM2B, respectively. Use the GND terminal between PWM1A and PWM1B / PWM2A and PWM2B as the ground connection for the PWM inputs.
6. Apply power to the board.
7. Audio should be heard through the speakers.

Instructions for PWM Input and Logic I/O

PIN	I/O	DESCRIPTION				
PWM1A PWM1B PWM2A PWM2B	INPUT	Accept TTL LEVEL PWM signal for driving each of the half bridge				
SHDNB	INPUT	Active low, pull low to shut off the MP8049S				
STBYB	INPUT	Active low, pull low to enter standby mode (turn all the switches to high impedance)				
FAULTB	OUTPUT	FAULTB will be pull low once OCP or OTP is triggered				
FLTB2 FLTB3	OUTPUT	Error reporting, details please refer to the below table				
		FLTB2	FLTB3	OCP	OTP	UVP
		1	1	0	0	0
		0	1	0	0	1
		1	0	0	1	0
		0	0	1	0	0

Note: for more details, please find the datasheet of MP8049S.
