## Description and Applications

M/A-COM's MA4EX180M-1225T is a silicon monolithic $1300-1900 \mathrm{MHz}$, medium barrier, double balanced mixer in a low cost miniature surface mount SOT-25 package. The die uses M/A-COM's unique $\mathrm{HMIC}^{\text {TM }}$ silicon/glass process to achieve low loss passive elements while retaining the advantages of medium barrier silicon Schottky diodes.

This part is offered with $\mathrm{Sn} / \mathrm{Pb}$ plating, as well as with $100 \%$ matte Sn plating on the RoHS compliant part number.

These mixers are well suited for high volume wireless and cellular applications where small size and repeatability are required. Typical applications include frequency conversion, modulation, and demodulation for receivers and transmitters in both portable cellular and base station applications.
