Functional Description

The SKY65052-372LF is a depletion mode pHEMT designed for low noise, high frequency applications. The SKY65052-372LF has a typical NF of 0.6 dB tested at the 2.4 GHz wireless LAN frequency band. A gain of 15.5 dB typical is achieved using the same circuit. If the frequency of operation is lowered to the 1 GHz range, NF performance of the device can approach 0.85 dB including input matching network losses.

Evaluation Board Description

The SKY65052-372LF Evaluation Board is used to test the performance of the SKY65052-372LF low noise transistor. An assembly drawing for the Evaluation Board is shown in Figure 8. The Evaluation Board schematic diagram is shown in Figure 9. Table 5 provides the Bill of Materials (BOM) list for Evaluation Board components.

Circuit Design Considerations

Input and output traces have been minimized to reduce losses. All surface mount components are 0402-sized to reduce component parasitics. Use of 0603 or larger components is not recommended. Component spacing has also been minimized. The board is provisioned with two RF connectors and a DC launch. RF connector and board loss up to component C1 is approximately 0.1 dB at 2.4 GHz.

Board material is 10 mil VT47 FR4 with 1 oz. copper cladding. The RF traces are 50 Ω.

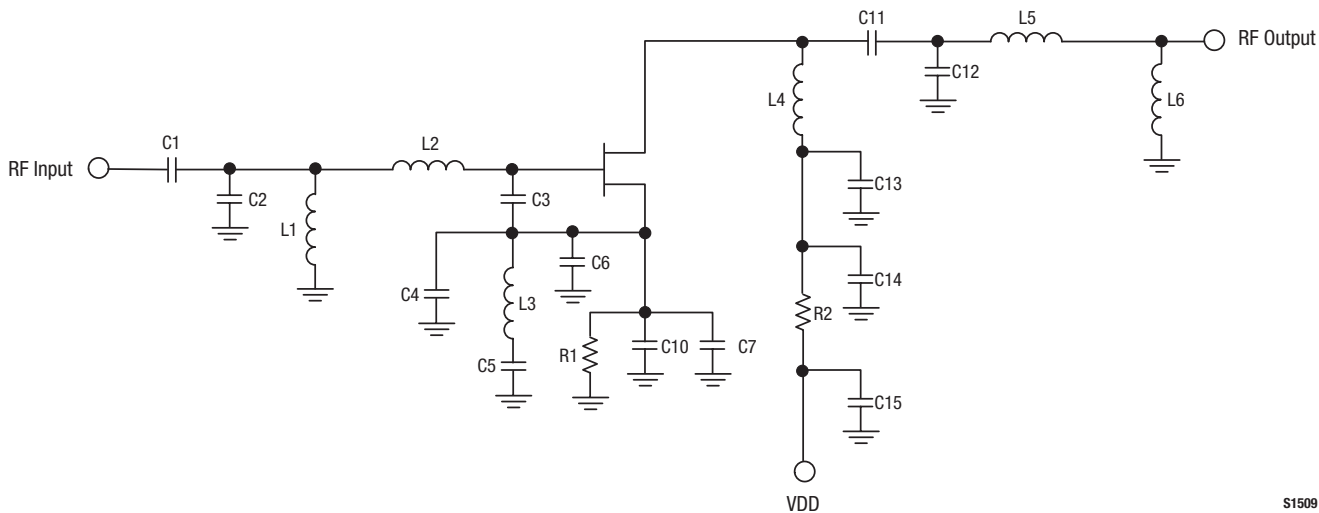

Evaluation Board Test Procedure

- Step 1: Connect RF test equipment to amplifier input/output SMA connectors.
- Step 2: Connect DC ground.
- Step 3: Connect VDD to a +5 V supply with a current limit of 100 mA. Verify that the board draws approximately 55 mA.
- Step 4: Apply RF signal or noise source.

Package Dimensions

The PCB layout footprint for the SKY65052-372LF is shown in Figure 10. Typical case markings are shown in Figure 11. Package dimensions for the 4-pin SC-70 are shown in Figure 12, and tape and reel dimensions are provided in Figure 13.

Package and Handling Information

Since the device package is sensitive to moisture absorption, it is baked and vacuum packed before shipping. Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

THE SKY65052-372LF is rated to Moisture Sensitivity Level 3 (MSL3) at 260 °C. It can be used for lead or lead-free soldering.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format. For packaging details, refer to the Skyworks Application Note, *Discrete Devices and IC Switch/Attenuators Tape and Reel Package Orientation*, document number 200083.

Electrostatic Discharge (ESD) Sensitivity

The SKY65052-372LF is a static-sensitive electronic device. Do not operate or store near strong electrostatic fields. Take proper ESD precautions.
