8-bit Proprietary Microcontroller cmos

F2MC-8L MB89480/MB89480L Series

MB89485/485L/P485/P485L/PV480

■ DESCRIPTION

The MB89480 series has been developed as a general-purpose version of the F²MC*-8L family consisting of proprietary 8-bit single-chip microcontrollers.

In addition to a compact instruction set, the microcontroller contains a variety of peripheral functions such as 21-bit timebase timer, watch prescaler, PWC timer, PWM timer, 8/16-bit timer/counter, 6-bit PPG, LCD controller/driver, external interrupt 1 (edge), external interrupt 2 (level), 10-bit A/D converter, UART/SIO, buzzer, watchdog timer reset.

The MB89480 series is designed suitable for LCD remote controller as well as in a wide range of applications for consumer product.

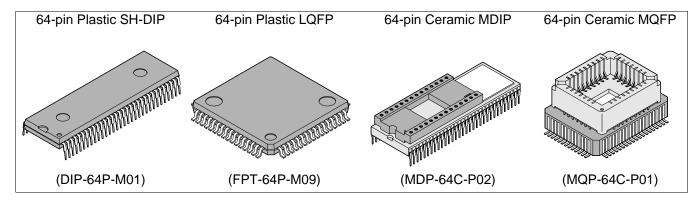

*: F2MC stands for FUJITSU Flexible Microcontroller.

■ FEATURES

- Package used LQFP package and SH-DIP package for MB89P485/P485L, MB89485/485L MDIP package and MQFP package for MB89PV480
- High speed operating capability at low voltage
- Minimum execution time: 0.32 μs at 12.5 MHz

(Continued)

■ PACKAGES

(Continued)

• F²MC-8L family CPU core

Instruction set optimized for controllers

Multiplication and division instructions 16-bit arithmetic operations Test and branch instructions Bit manipulation instructions, etc.

Six timers

PWC timer (also usable as an interval timer)

PWM timer

8/16-bit timer/counter x 2

21-bit timebase timer

Watch prescaler

• Programmable pulse generator

6-bit PPG with program-selectable pulse width and period

External interrupt

Edge detection (selectable edge): 4 channels

Low level interrupt (wake-up function): 8 channels

• A/D converter (4 channels)

10-bit successive approximation type

• UART/SIO

Synchronous/asynchronous data transfer capability

• LCD controller/driver

Max 31 segments output x 4 commons

Booster for LCD driving (selected by mask option)

• Buzzer

7 frequencies are selectable by software

• Low-power consumption mode

Stop mode (oscillation stops so as to minimize the current consumption.)

Sleep mode (CPU stops so as to reduce the current consumption to approx. 1/3 of normal.)

Watch mode (everything except the watch prescaler stops so as to reduce the power comsumption to an extremely low level.)

Sub-clock mode

- Watchdog timer reset
- I/O ports: Max 42 channels

■ PRODUCT LINEUP

| Part number Parameter | MB89485L | MB89485 | MB89P485L | MB89P485 | MB89PV480 | |
|-------------------------------------|---|-----------------------------|------------------------------|-------------------|---------------------------------|--|

O : Availabe X : Not available

^{*2 :} Read protection feature is selected by part number, detail please refer to MASK OPTIONS.

■ DIFFERENCES AMONG PRODUCTS

1. Memory Size

Before evaluating using the piggyback product, verify its differences from the product that will actually be used. Take particular care on the following point:

• The stack area is set at the upper limit of the RAM.

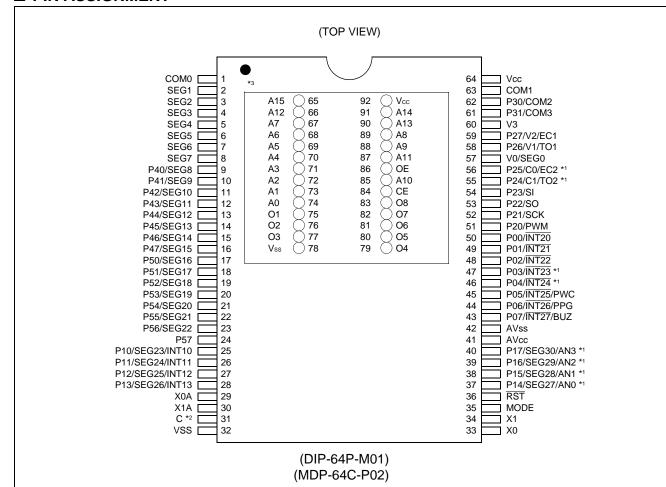

2. Current Consumption

- For the MB89PV480, the current consumed by the EPROM mounted in the piggy-back socket is needed to be included.
- When operating at low speed, the current consumed by the one-time PROM product is greater than that for the mask ROM product. However, the current consumption is roughly the same in sleep and stop mode.
- For more information, see "■ ELECTRICAL CHARACTERISTICS".

3. Oscillation Stabilization Time after Power-on Reset

- For MB89PV480, MB89P485L and MB89485L, there is no power-on stabilization time after power-on reset.
- For MB89P485, there is power-on stabilization time after power-on reset.
- For MB89485, the power-on stabilization time can be selected.
- For more information, please refer to "■ MASK OPTION".

■ PIN ASSIGNMENT

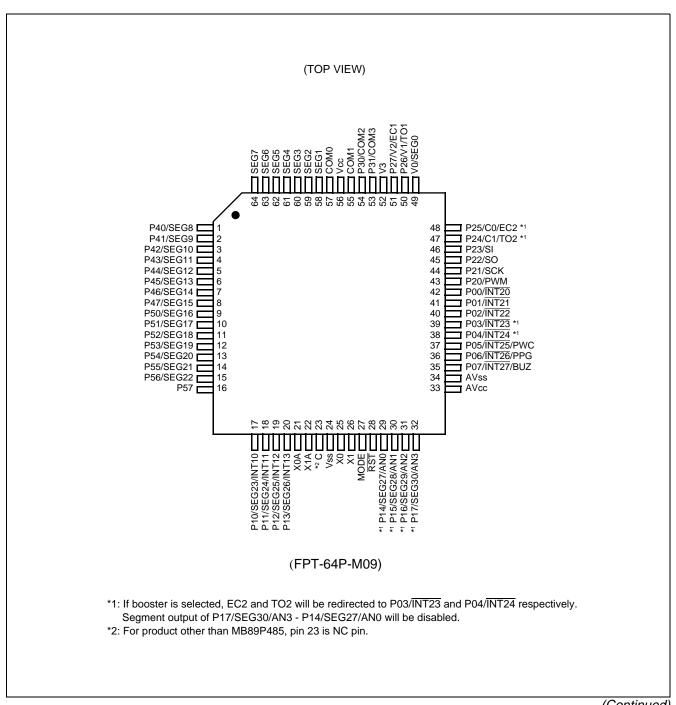

*1: If booster is selected, EC2 and TO2 will be redirected to P03/INT23 and P04/INT24 respectively. Segment output of P17/SEG30/AN3 - P14/SEG27/AN0 will be disabled.

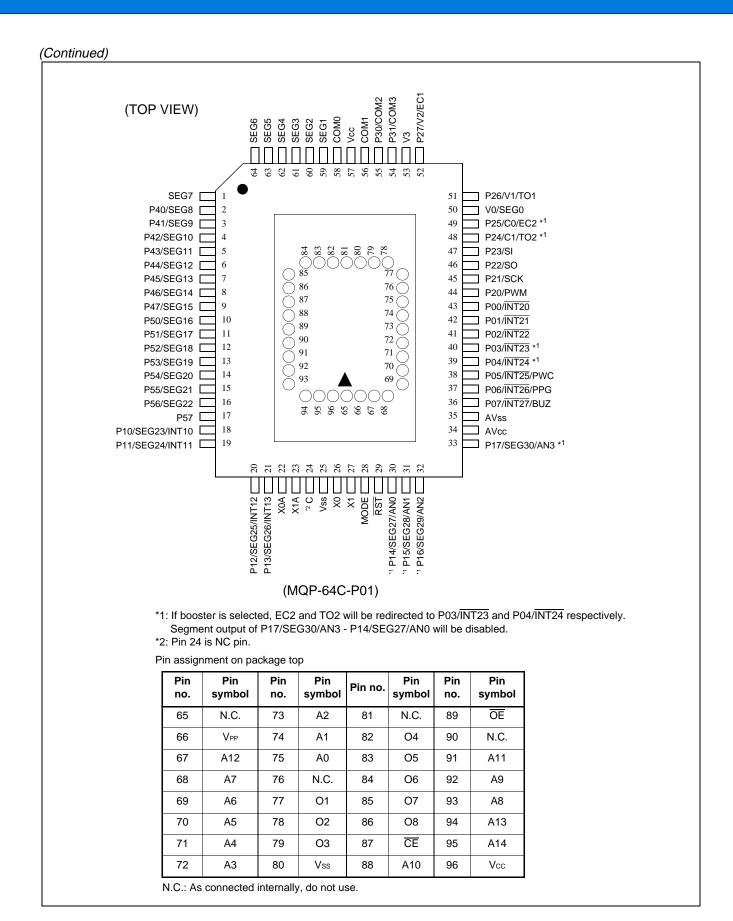

^{*3:} Pin assignment on package top.

| Pin no. | Pin symbol |
|---------|---------------|---------|---------------|---------|---------------|---------|---------------|
| 65 | A15 | 73 | A1 | 81 | O6 | 89 | A8 |
| 66 | A12 | 74 | A0 | 82 | 07 | 90 | A13 |
| 67 | A7 | 75 | 01 | 83 | O8 | 91 | A14 |
| 68 | A6 | 76 | O2 | 84 | CE | 92 | Vcc |
| 69 | A5 | 77 | О3 | 85 | A10 | | |
| 70 | A4 | 78 | Vss | 86 | ŌĒ | | |
| 71 | А3 | 79 | 04 | 87 | A11 | | |
| 72 | A2 | 80 | O5 | 88 | A9 | | |

N.C.: As connected internally, do not use.

^{*2:} For product other than MB89P485, pin 31 is NC pin.

■ PIN DESCRIPTION

| Pin number | | | I/O | | |
|--------------------|-----------|-----------|--|-----------------|---|
| SH-DIP*1 MDIP*4 | MQFP*2 | QFP*3 | Pin name | circuit type | Function |
| 33 | 26 | 25 | X0 | | Connection pins for a crystal or other oscillator. |
| 34 | 27 | 26 | X1 | A | An external clock can be connected to X0. In this case, leave X1 open. |
| 29 | 22 | 21 | X0A | Α | Connection pins for a crystal or other oscillator. An external clock can be connected to X0A. In this case, |
| 30 | 23 | 22 | X1A | A | leave X1A open. |
| 35 | 28 | 27 | MODE | В | Input pin for setting the memory access mode. Connect directly to Vss. |
| 36 | 29 | 28 | RST | С | Reset I/O pin. The pin is an N-ch open-drain type with pull- up resistor and a hysteresis input. The pin outputs an "L" level when an internal reset request is present. Inputting an "L" level initializes internal circuits. |
| 50 (. 40 | 40 (. 44 | 40 (. 40 | P00/INT20 | - | General-purpose CMOS I/O port. |
| 50 to 48 | 43 to 41 | 42 to 40 | to P02/INT22 | D | A hysteresis input. The pin is shared with external interrupt 2 input. |
| 47 | 40 | 39 | P03/INT23 | D | General-purpose CMOS I/O port. A hysteresis input. The pin is shared with external interrupt 2 input, and shared with 8/16-bit timer/counter 21, 22 input when booster is selected. |
| 46 | 39 | 38 | P04/ĪNT24 | D | General-purpose CMOS I/O port. A hysteresis input. The pin is shared with external interrupt 2 input, and shared with 8/16-bit timer/counter 21, 22 output when booster is selected. |
| 45 | 38 | 37 | P05/INT25/ PWC | D | General-purpose CMOS I/O port. A hysteresis input. The pin is shared with external interrupt 2 input, and PWC input. |
| 44 | 37 | 36 | P06/INT26/ PPG | D | General-purpose CMOS I/O port. A hysteresis input. The pin is shared with external interrupt 2 input, and 6-bit PPG output. |
| 43 | 36 | 35 | P07/INT27/ BUZ | D | General-purpose CMOS I/O port. A hysteresis input. The pin is shared with external interrupt 2 input and buzzer output. |
| 25 to 28 | 18 to 21 | 17 to 20 | P10/SEG23/ INT10 to P13/ SEG26/INT13 | F/K | General-purpose N-ch open-drain I/O port. A hysteresis input. The pin is shared with external interrupt 1 input and LCD segment output. |

| Р | Pin number | | | I/O | |
|--------------------|------------|----------|--|-----------------|---|
| SH-DIP*1 MDIP*4 | MQFP*2 | QFP*3 | Pin name | circuit type | Function |
| 37 to 40 | 30 to 33 | 29 to 32 | P14/SEG27/ AN0 to P17/ SEG30/AN3 | G/K | General-purpose N-ch open-drain I/O port. An analog input. The pin is shared with A/D converter input and LCD segment output. LCD segment output will be disabled when booster is selected. |
| 51 | 44 | 43 | P20/PWM | Е | General-purpose CMOS I/O port. The pin is shared with PWM output. |
| 52 | 45 | 44 | P21/SCK | Е | General-purpose CMOS I/O port. The pin is shared with UART/SIO clock I/O. |
| 53 | 46 | 45 | P22/SO | E | General-purpose CMOS I/O port. The pin is shared with UART/SIO data output. |
| 54 | 47 | 46 | P23/SI | D | General-purpose CMOS I/O port. The pin is shared with UART/SIO data input. |
| 55 | 48 | 47 | P24/C1/TO2 | Н | General-purpose CMOS I/O port. The pin is shared with 8/16-bit timer 21, 22 output (it is redirected to P04/INT24 when booster is selected), and as a capacitor connecting pin when booster is selected. |
| 56 | 49 | 48 | P25/C0/EC2 | F | General-purpose CMOS I/O port. A hysteresis input. The pin is shared with 8/16-bit timer 21, 22 input (it is redirected to P03/INT23 when booster is selected), and as a capacitor connecting pin when booster is selected. |
| 58 | 51 | 50 | P26/V1/TO1 | Н | General-purpose CMOS I/O port. The pin is shared with 8/16-bit timer 11, 12 output, and LCD power driving pin. |
| 59 | 52 | 51 | P27/V2/EC1 | F | General-purpose CMOS I/O port. A hysteresis input. The pin is shared with 8/16-bit timer 11, 12 input, and LCD power driving pin. |
| 62 | 55 | 54 | P30/COM2 | I/K | General-purpose N-ch open-drain output port. The pin is shared with the LCD common output. |
| 61 | 54 | 53 | P31/COM3 | I/K | General-purpose N-ch open-drain output port. The pin is shared with the LCD common output. |
| 9 to 16 | 2 to 9 | 1 to 8 | P40/SEG8 to P47/SEG15 | H/K | General-purpose N-ch open-drain I/O port. The pin is shared with LCD segment output. |

■ HANDLING DEVICES

1. Preventing Latch-up

Latch-up may occur on CMOS IC if voltage higher than V_{CC} or lower than V_{SS} is applied to input and output pins other than medium- to high-voltage pins or if higher than the voltage which shows on "1. Absolute Maximum Ratings" in ■ ELECTRICAL CHARACTERISTICS is applied between V_{CC} and V_{SS}.

When latch-up occurs, power supply current increases rapidly and might thermally damage elements. When using, take great care not to exceed the absolute maximum ratings.

Also, take care to prevent the analog power supply (AVcc) and analog input from exceeding the digital power supply (Vcc) when the analog system power supply is turned on and off.

2. Treatment of Unused Input Pins

Leaving unused input pins open could cause malfunctions. They should be connected to a pull-up or pull-down resistor.

3. Treatment of Power Supply Pins on Microcontrollers with A/DConverter

Connect to be AVcc = Vcc and AVss = Vss even if the A/D converter is not in use.

4. Treatment of N.C. Pins

Be sure to leave (internally connected) N.C. pins open.

5. Power Supply Voltage Fluctuations

Although Vcc power supply voltage is assured to operate within the rated range, a rapid fluctuation of the voltage could cause malfunctions, even if it occurs within the rated range. Stabilizing voltage supplied to the IC is therefore important. As stabilization guidelines, it is recommended to control power so that Vcc ripple fluctuations (P-P value) will be less than 10% of the standard Vcc value at the commercial frequency (50 to 60 Hz) and the transient fluctuation rate will be less than 0.1 V/ms at the time of a momentary fluctuation such as when power is switched.

6. Precautions when Using an External Clock

Even when an external clock is used, oscillation stabilization time is required for power-on reset and wake-up from stop mode.

7. Notes on noise in the External Reset Pin (RST)

If the reset pulse applied to the external reset pin (\overline{RST}) does not meet the specifications, it may cause malfunctions. Use caution so that the reset pulse less than the specifications will not be fed to the external reset pin (\overline{RST}) .

■ PROGRAMMING OTPROM IN MB89P485/P485L WITH SERIAL PROGRAMMER

1. Programming the OTPROM with Serial Programmer

• All OTP products can be programmed with serial programmer.

2. Programming the OTPROM

• To program the OTPROM using FUJITSU MCU programmer MB91919-001.

Inquiry : Fujitsu Microelectronics Asia Pte Ltd. :TEL (65)-2810770 FAX (65)-2810220

3. Programming Adapter for OTPROM

 To program the OTPROM using FUJITSU MCU programmer MB91919-001, use the programming adapter listed below.

| Package | Compatible socket adapter |
|-------------|---------------------------|
| DIP-64P-M01 | MB91919-812 |
| FPT-64P-M09 | MB91919-813 |

Inquiry: Fujitsu Microelectronics Asia Pte Ltd.: TEL (65)-2810770

FAX (65)-2810220

4. OTPROM Content Protection

For product with OTPROM content protection feature (MB89P485/P485L-103, MB89P485/P485L-104), OT-PROM content can be read using serial programmer if the OTPROM content protection mechanism is not activated.

One predefined area of the OTPROM (FFFC $_H$) is assigned to be used for preventing the read access of OTPROM content. If the protection code " $_{00H}$ " is written in this address (FFFC $_H$), the OTPROM content cannot be read by any serial programmer.

Note: The program written into the OTPROM cannot be verified once the OTPROM protection code is written ("00H" in FFFCH). It is advised to write the OTPROM protection code at last.

5. Programming Yield

All bits cannot be programmed at Fujitsu shipping test to a blanked OTPROM microcomputer, due to its nature. For this reason, a programming yield of 100% cannot be assured at all times.

■ PROGRAMMING OTPROM IN MB89P485/P485L WITH PARALLEL PROGRAMMER

1. Programming OTPROM with Parallel Programmer

• Only products without protection feature (i.e. MB89P485/P485L-101 and MB89P485/P485L-102) can be programmed with parallel programmer. Product with protection feature (i.e. MB89P485/P485L-103 and MB89P485/P485L-104) cannot be programmed with parallel programmer.

2. ROM Writer Adapters and Recommended ROM Writers

• The following shows ROM writer adapters and recommended ROM writers.

Ando Electric Co., Ltd. (Parallel programmer)

| Package name | Applicable adapter model | Recommended writer |
|--------------|--------------------------|--------------------|
| DIP-64P-M01 | ROM2-64SD-32DP-8LA2 | AF9708* AF9709* |
| FPT-64P-M09 | ROM2-64QF2-32DP-8LA3 | AF9709 AF9723* |

^{*:} For the programmer and the version of the programmer, contact the Flash Support Group, Inc.

Fujitsu Microelectronics Asia Pte Ltd. (Serial programmer)

| Package name | Applicable adapter model | Recommended writer |
|--------------|--------------------------|--------------------|
| DIP-64P-M01 | MB91919-604 | MB91919-001 |
| FPT-64P-M09 | MB91919-605 | MD91919-001 |

Inquiries: Fujitsu Microelectronics Asia Pte Ltd.: TEL (65)-2810770

Sunhayato Corp. : TEL 81-(3)-3986-7791 : FAX 81-(3)-3971-0535

E-mail: adapter@sunhayato.co.jp

Flash Support Group, Inc : FAX 81-(53)-428-8377

E-mail: support@j-fsg.co.jp

3. Writing Data to the OTPROM using Writer from Minato Electronics Co., Ltd.

- (1) Set the OTPROM writer for the CU50-OTP (device code: cdB6DC).
- (2) Load the program data to the OTPROM writer.
- (3) Write data using the OTPROM writer.

4. Programming Yield

All bits cannot be programmed at Fujitsu shipping test to a blanked OTPROM microcomputer, due to its nature. For this reason, a programming yield of 100% cannot be assured at all times.

■ PROGRAMMING TO THE EPROM WITH PIGGYBACK/EVALUATION DEVICE

1. EPROM for Use

MBM27C256A-20TVM

2. Programming Socket Adapter

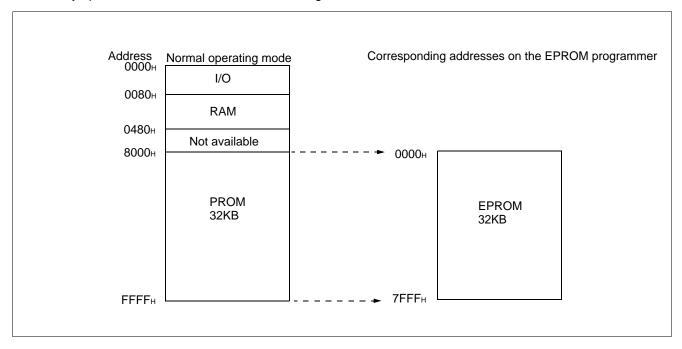

To program to the PROM using an EPROM programmer, use the socket adapter (manufacturer: Sun Hayato Co., Ltd.) listed below.

| Package | Adapter socket part number |
|--------------------|----------------------------|
| LCC-32 (Rectangle) | ROM-32LC-28DP-S |

Inquiry: Sun Hayato Co., Ltd.: TEL 81-3-3986-0403

3. Memory Space

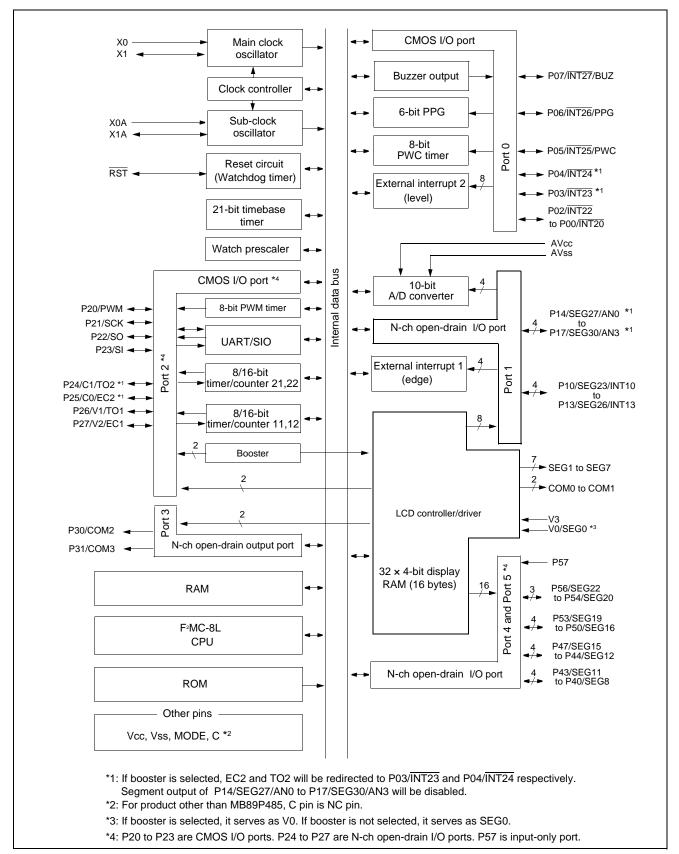

Memory space in each mode is shown in the diagram below.

4. Programming to the EPROM

- (1) Set the EPROM programmer to the MBM27C256.
- (2) Load program data into the EPROM programmer at 0000H to 7FFFH.
- (3) Program to 0000H to 7FFFH with the EPROM programmer.

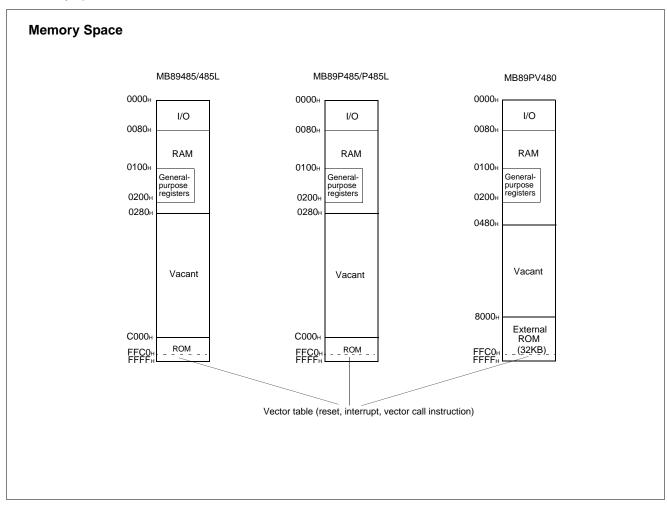

■ BLOCK DIAGRAM

■ CPU CORE

1. Memory Space

The microcontrollers of the MB89480 series offer a memory space of 64 Kbytes for storing all of I/O, data, and program areas. The I/O area is located the lowest address. The data area is provided immediately above the I/O area. The data area can be divided into register, stack, and direct areas according to the application. The program area is located at exactly the opposite end, that is, near the highest address. Provide the tables of interrupt reset vectors and vector call instructions toward the highest address within the program area. The memory space of the MB89480 series is structured as illustrated below.

2. Registers

The F²MC-8L family has two types of registers; dedicated registers in the CPU and general-purpose registers in the memory. The following registers are provided:

Program counter (PC) : A 16-bit register for indicating instruction storage positions.

Accumulator (A) : A 16-bit temporary register for storing arithmetic operations, etc. When the

instruction is an 8-bit data processing instruction, the lower byte is used.

Temporary accumulator (T) : A 16-bit register for performing arithmetic operations with the accumulator.

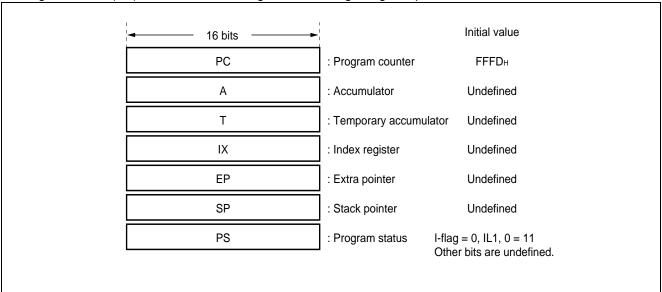

When the instruction is an 8-bit data processing instruction, the lower byte is used.

Index register (IX) : A 16-bit register for index modification.

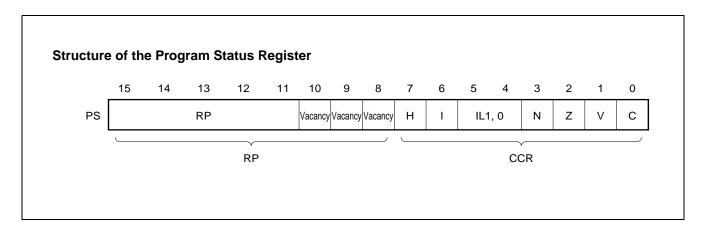

Extra pointer (EP) : A 16-bit pointer for indicating a memory address.

Stack pointer (SP) : A 16-bit register for indicating a stack area.

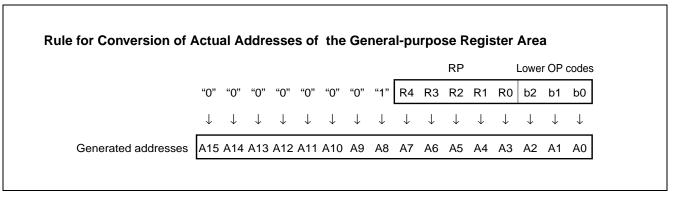

Program status (PS) : A 16-bit register for storing a register pointer, a condition code.

The PS can further be divided into higher 8 bits for use as a register bank pointer (RP) and the lower 8 bits for use as a condition code register (CCR). (See the diagram below.)

The RP indicates the address of the register bank currently in use. The relationship between the pointer contents and the actual address is based on the conversion rule illustrated below.

The CCR consists of bits indicating the results of arithmetic operations and the contents of transfer data and bits for control of CPU operations at the time of an interrupt.

H-flag : Set to "1" when a carry or a borrow from bit 3 to bit 4 occurs as a result of an arithmetic operation. Clear to "0" otherwise. This flag is for decimal adjustment instructions.

I-flag : Interrupt is allowed when this flag is set to "1". Interrupt is prohibited when the flag is set to "0". Clear to "0" when reset.

IL1, 0 : Indicates the level of the interrupt currently allowed. Processes an interrupt only if its request level is higher than the value indicated by this bit.

| IL1 | IL0 | Interrupt level | Priority |
|-----|-----|-----------------|--------------------|
| 0 | 0 | 1 | High |
| 0 | 1 | l | † |
| 1 | 0 | 2 | |
| 1 | 1 | 3 | Low = no interrupt |

N-flag : Set to "1" if the MSB is set to "1" as the result of an arithmetic operation. Clear to "0" otherwise.

Z-flag : Set to "1" when an arithmetic operation results in "0". Clear to "0" otherwise.

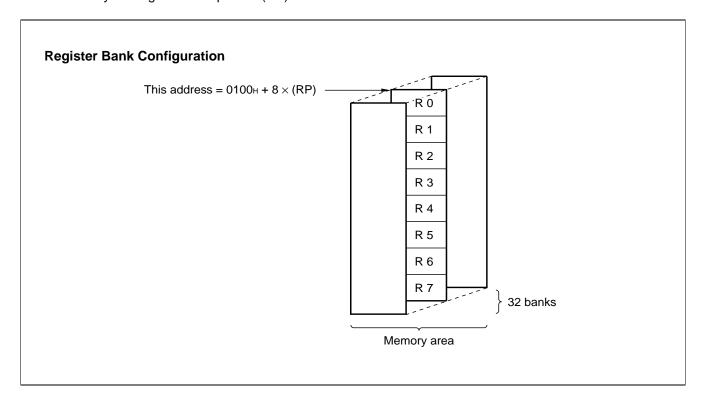

V-flag : Set to "1" if a signed numeric value overflows because of an arithmetic calculation. Clear to "0" if the overflow does not occur.

C-flag : Set to "1" when a carry or a borrow from bit 7 occurs as a result of an arithmetic operation. Clear to "0" otherwise. Set to the shift-out value in the case of a shift instruction.

The following general-purpose registers are provided:

General-purpose registers: An 8-bit register for storing data

The general-purpose registers are 8 bits and located in the register banks of the memory. One bank contains eight registers. Up to a total of 32 banks can be used on the MB89480 series. The bank currently in use is indicated by the register bank pointer (RP).

■ I/O MAP

| Address | Register name | Register description | Read/Write | Initial value |
|------------|---------------|---|------------|-------------------|

^{*:} Bit manipulation instruction cannot be used.

• Read/write access symbols

R/W : Readable and writable

R : Read-only W : Write-only • Initial value symbols

0 : The initial value of this bit is "0".
1 : The initial value of this bit is "1".
X : The initial value of this bit is undefined.

- : Unused bit.

M : The initial value of this bit is determined by mask option.

■ ELECTRICAL CHARACTERISTICS

1. Absolute Maximum Ratings

(AVss = Vss = 0.0 V)

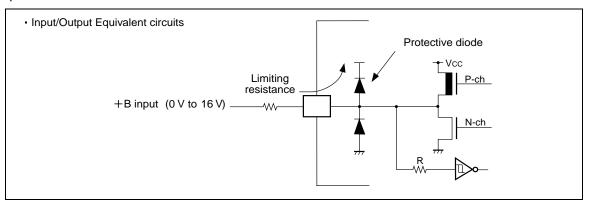

| Davanatas | Symbol | Va | lue | Unit | Domouleo |
|--|----------------|-------------|-----------|------|--|
| Parameter | Symbol | Min | Max | Unit | Remarks |
| Power supply voltage | Vcc AVcc | Vss-0.3 | Vss + 6.0 | V | MB89PV480, MB89P485, MB89485 AVcc must not exceed Vcc |
| | Vcc AVcc | Vss - 0.3 | Vss + 4.0 | V | MB89P485L, MB89485L AVcc must not exceed Vcc |
| LCD power supply voltage | V0 to V3 | Vss-0.3 | Vss + 6.0 | V | |
| Input voltage | Vı | Vss-0.3 | Vcc + 0.3 | V | P00 to P07, P10 to P17, P20 to P27, P40 to P47, P50 to P57 |
| Output voltage | Vo | Vss - 0.3 | Vcc + 0.3 | V | P00 to P07, P10 to P17, P20 to P27, P30 to P31, P40 to P47, P50 to P56 |
| Maximum clamp current | I CLAMP | - 2.0 | + 2.0 | mA | * |
| Total maximum clamp current | Σ ICLAMP | _ | 20 | mA | * |
| "L" level maximum output current | lol | _ | 15 | mA | |
| "L" level average output current | lolav | | 4 | mA | Average value (operating current × operating rate) |
| "L" level total maximum output current | ∑lo∟ | _ | 100 | mA | |
| "L" level total average output current | Σ lolav | _ | 40 | mA | Average value (operating current × operating rate) |
| "H" level maximum output current | Іон | _ | -15 | mA | |
| "H" level average output current | Іонач | | -4 | mA | Average value (operating current × operating rate) |
| "H" level total maximum output current | ∑Іон | _ | -50 | mA | |
| "H" level total average output current | ∑Iohav | _ | -20 | mA | Average value (operating current × operating rate) |
| Power consumption | P _D | _ | 300 | mW | |
| Operating temperature | TA | -40 | +85 | °C | |
| Storage temperature | Tstg | - 55 | +150 | °C | |

Precautions: Permanent device damage may occur if the above "Absolute Maximum Ratings" are exceeded.

Functional operation should be restricted to the conditions as detailed in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

- *: Applicable to pins: P00 to P07, P20 to P23, AN0 to AN3
 - Use within recommended operating conditions.
 - Use at DC voltage (current).
 - The +B signal should always be applied with a limiting resistance placed between the +B signal and the microcontroller.
 - The value of the limiting resistance should be set so that when the +B signal is applied the input current to the microcontroller pin does not exceed rated values, either instantaneously or for prolonged periods.

- Note that when the microcontroller drive current is low, such as in the power saving modes, the +B input potential may pass through the protective diode and increase the potential at the Vcc pin, and this may affect other devices.
- Note that if a +B signal is input when the microcontroller current is off (not fixed at 0 V), the power supply is provided from the pins, so that incomplete operation may result.
- Note that if the +B input is applied during power-on, the power supply is provided from the pins and the resulting supply voltage may not be sufficient to operate the power-on result.
- Care must be taken not to leave the +B input pin open.
- Note that analog system input/output pins other than the A/D input pins (LCD drive pins, comparator input pins, etc.) cannnot accept +B signal input.
- Sample recommended circuits :

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

2. Recommended Operating Conditions

(AVss = Vss = 0.0 V)

| Parameter | Symbol | Va | lue | Unit | Remarks | | |
|--------------------------|-------------|------|-----|-------|------------------------------------|------------------------------------|--|
| Farameter | Syllibol | Min | Max | Offic | | | |
| | | 2.2* | 5.5 | V | Operation assurance range | MB89485 | |
| | | 3.5* | 5.5 | V | Operation assurance range | MB89P485 | |
| | Vcc AVcc | 2.7* | 5.5 | V | Operation assurance range | MB89PV480 | |
| Power supply voltage | | 1.5 | 5.5 | V | Retains the RAM state in stop mode | MB89485, MB89P485, MB89PV480 | |
| | | 2.2* | 3.6 | V | Operation assurance range | MB89485L, | |
| | | 1.5 | 3.6 | V | Retains the RAM state in stop mode | MB89P485L | |
| LCD power supply voltage | V0 to V3 | Vss | Vcc | V | | | |
| Operating temperature | TA | -40 | +85 | °C | | | |

*: These values depend on the operating conditions and the analog assurance range. See Figure 1, 2, 3 and "5. A/D Converter Electrical Characteristics."

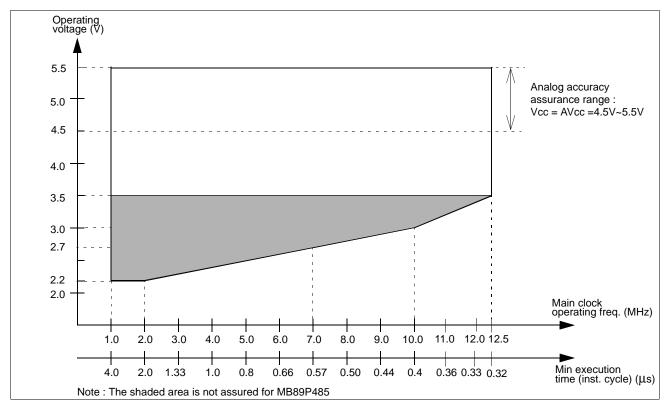

Figure 1 Operating Voltage vs. Main Clock Operating Frequency (MB89P485/485)

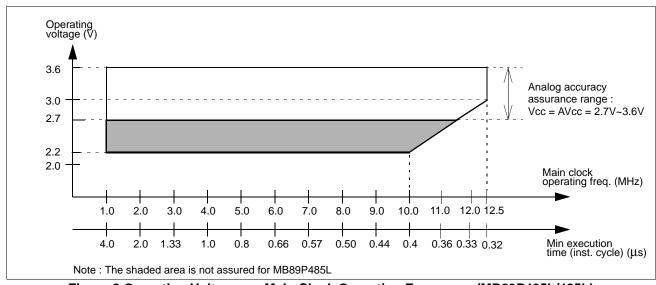

Figure 2 Operating Voltage vs. Main Clock Operating Frequency (MB89P485L/485L)

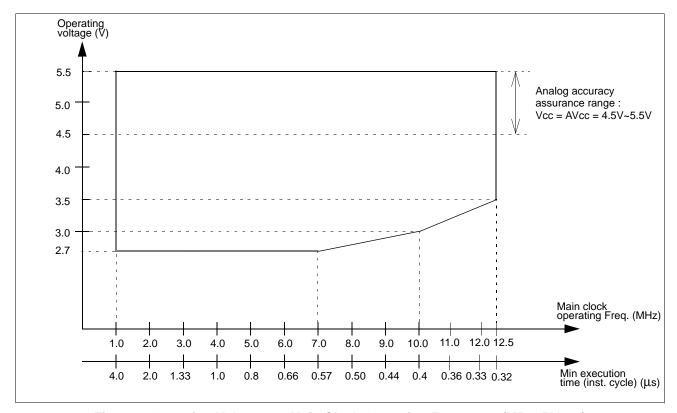

Figure 3 Operating Voltage vs. Main Clock Operating Frequency (MB89PV480)

Figure 1, 2 and 3 indicate the operating frequency of the external oscillator at an instruction cycle of 4/Fch.

Since the operating voltage range is dependent on the instruction cycle, see minimum execution time if the operating speed is switched using a gear.

WARNING: The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representatives beforehand.

4. AC Characteristics

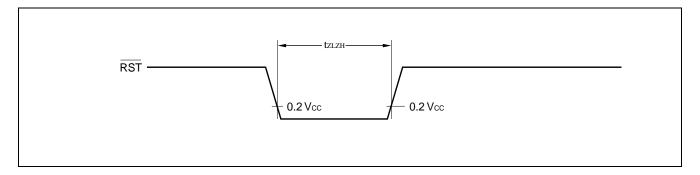

(1) Reset Timing

 $(AVcc = Vcc = 5.0 \text{ V for MB89PV480}, MB89P485, MB89485, AVss = Vss = 0.0 \text{ V}, T_A = -40^{\circ}\text{C to } +85^{\circ}\text{C})$ $AVcc = Vcc = 3.0 \text{ V for MB89P485L}, MB89485L, AVss = Vss = 0.0 \text{ V}, T_A = -40^{\circ}\text{C to } +85^{\circ}\text{C})$

| Parameter | Symbol | Condition | Valu | ıe | Unit | Remarks |
|---------------------|---------------|-----------|----------|-----|------|---------|
| Farameter | Syllibol | Condition | Min | Max | Onit | Remarks |
| RST "L" pulse width | t zlzh | _ | 48 thcyl | _ | ns | |

Note: they is the oscillation cycle (1/FcH) to input to the X0 pin.

The MCU operation is not guaranteed when the "L" pulse width is shorter than tzlzh.

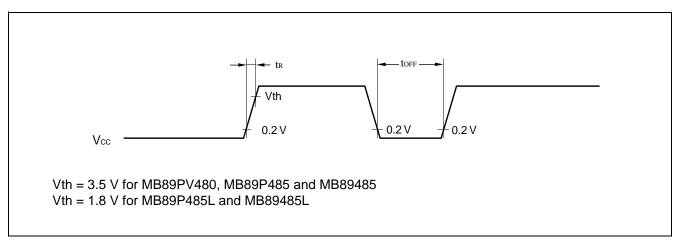

(2) Power-on Reset

$$(AVss = Vss = 0.0 V, T_A = -40^{\circ}C \text{ to } +85^{\circ}C)$$

| Parameter | Symbol | Condition | Value | | Unit | Remarks | |
|---------------------------|--------------|-----------|-------|-----|------|----------------------------|--|
| Farameter | Symbol | Condition | Min | Max | | | |
| Power supply rising time | t R | | _ | 50 | ms | | |
| Power supply cut-off time | t off | | 1 | _ | ms | Due to repeated operations | |

Note: Make sure that power supply rises within the selected oscillation stabilization time.

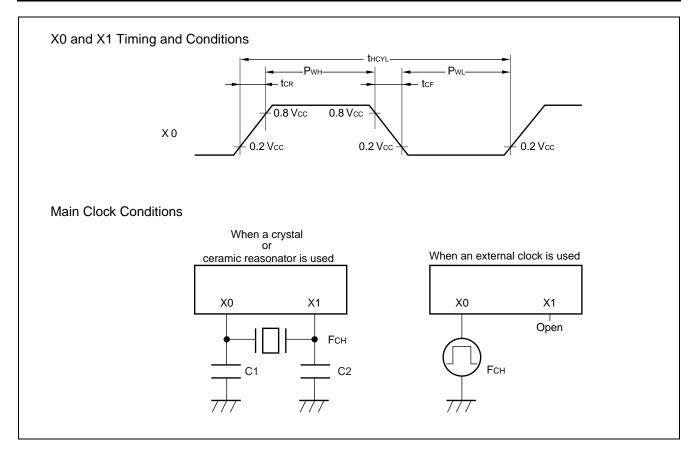

Rapid changes in power supply voltage may cause a power-on reset. If power supply voltage needs to be varied in the course of operation, a smooth voltage rise is recommended.

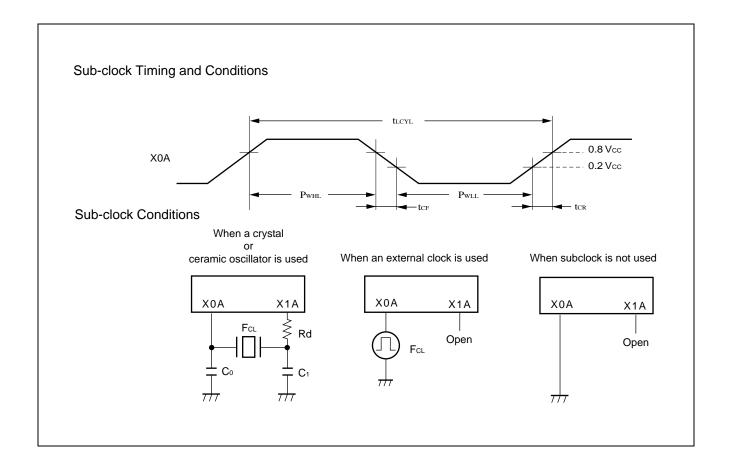

(3) Clock Timing

 $(AVss = Vss = 0.0 V, T_A = -40^{\circ}C \text{ to } +85^{\circ}C)$

| Parameter | Symbol | Pin | Value | | | Unit | Remarks |

^{*:} For information on tinst, see "(4) Instruction Cycle" in "4. AC Characteristics".

(2) A/D Converter Glossary

Resolution

Analog changes that are identifiable with the A/D converter.

When the number of bits is 10, analog voltage can be divided into $2^{10} = 1024$.

• Linearity error (unit: LSB)

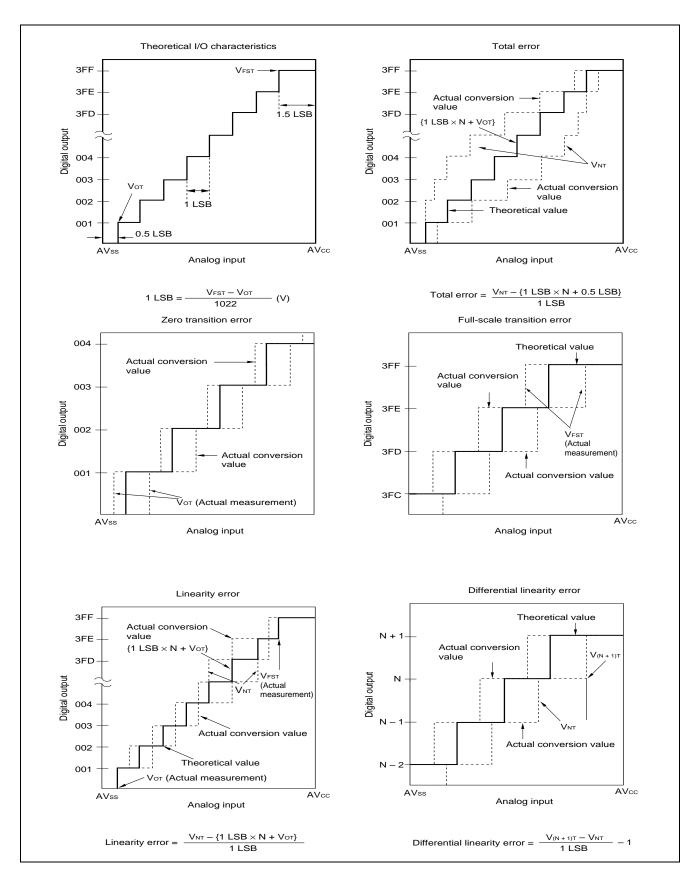

The deviation of the straight line connecting the zero transition point ("00 0000 0000" \leftrightarrow "00 0000 0001") with the full-scale transition point ("11 1111 1111" \leftrightarrow "11 1111 1110") from actual conversion characteristics.

• Differential linearity error (unit: LSB)

The deviation of input voltage needed to change the output code by 1 LSB from the theoretical value.

• Total error (unit: LSB)

The difference between theoretical and actual conversion values.

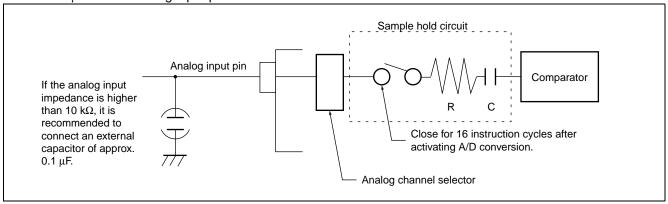

(3) Notes on Using A/D Converter

Input impedance of the analog input pins
 The A/D converter used for the MB89480 series contains a sample and hold circuit as illustrated below to fetch analog input voltage into the sample and hold capacitor for 16 instruction cycles after activation A/D conversion.

For this reason, if the output impedance of the external circuit for the analog input is high, analog input voltage might not stabilize within the analog input sampling period. Therefore, it is recommended to keep the output impedance of the external circuit low.

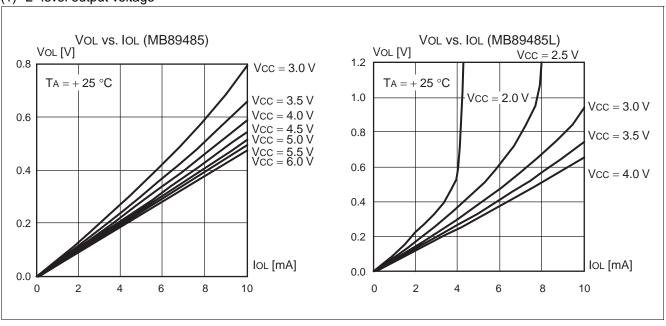

Note that if the impedance cannot be kept low, it is recommended to connect an external capacitor of about 0.1 μ F for the analog input pin.

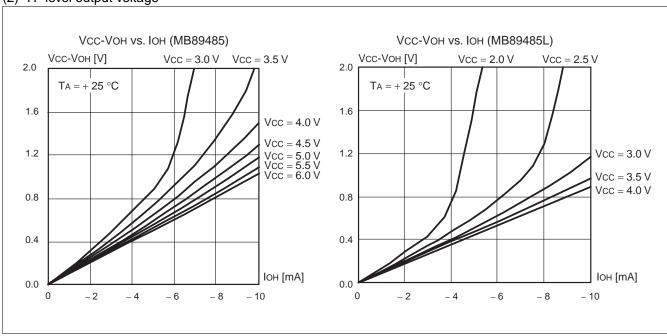

| | MB89485 MB89PV480 | MB89485L | MB89P485 | MB89P485L |
|--|----------------------|----------|----------|-----------|
| R: analog input equivalent resistance | 2.2 kΩ | 2.8 kΩ | 2.6 kΩ | 7.1 kΩ |
| C: analog input equivalent capacitance | 45 pF | 46 pF | 28 pF | 48.3 pF |

■ EXAMPLE CHARACTERISTICS

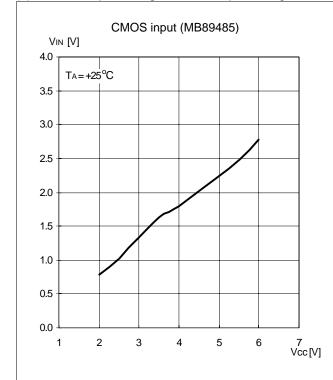

(1) "L" level output voltage

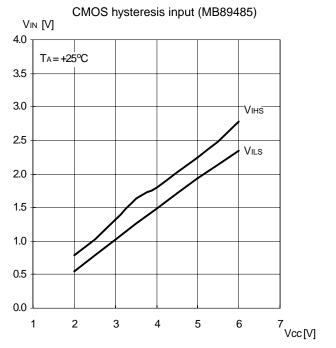

(2) "H" level output voltage

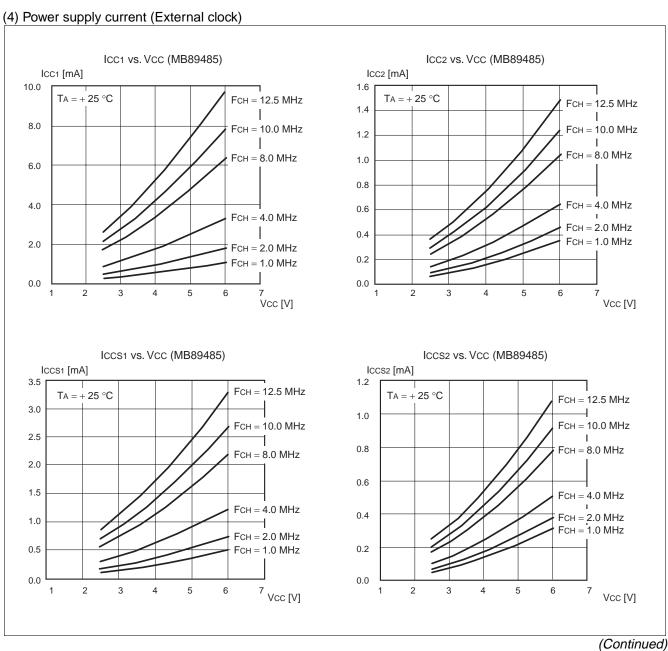

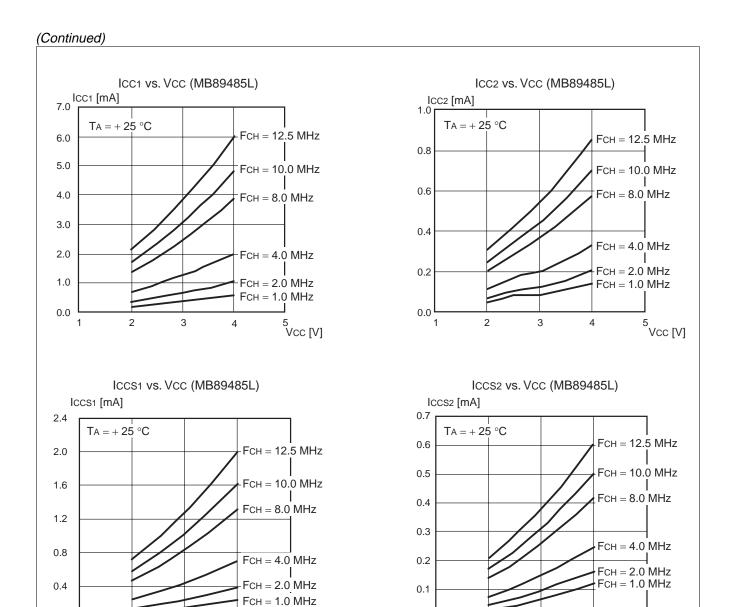

V_{IHS}: Threshold when input voltage in hysteresis characteristics is set to "H" level.

VILS: Threshold when input voltage in hysteresis characteristics is set to "L" level.

FUJITSU LIMITED

All Rights Reserved.

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information, such as descriptions of function and application circuit examples, in this document are presented solely for the purpose of reference to show examples of operations and uses of Fujitsu semiconductor device; Fujitsu does not warrant proper operation of the device with respect to use based on such information. When you develop equipment incorporating the device based on such information, you must assume any responsibility arising out of such use of the information. Fujitsu assumes no liability for any damages whatsoever arising out of the use of the information.

Any information in this document, including descriptions of function and schematic diagrams, shall not be construed as license of the use or exercise of any intellectual property right, such as patent right or copyright, or any other right of Fujitsu or any third party or does Fujitsu warrant non-infringement of any third-party's intellectual property right or other right by using such information. Fujitsu assumes no liability for any infringement of the intellectual property rights or other rights of third parties which would result from the use of information contained herein.

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for use requiring extremely high reliability (i.e., submersible repeater and artificial satellite).

Please note that Fujitsu will not be liable against you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Law of Japan, the prior authorization by Japanese government will be required for export of those products from Japan.
