Remark:

HCI\_CTS is an input signal to the CC256X device:

- When HCI\_CTS is low, then CC256X is allowed to send data to Host device.

- When HCI\_CTS is high, then CC256X is not allowed to send data to Host device.

<sup>7</sup> ESD: Human Body Model (HBM). JEDEC 22-A114

<sup>8</sup> I = input; O = output; IO = bidirectional; P = power; PU = pulled up; PD = pulled down

<sup>9</sup> I/O Type: Digital I/O cells. HY = input hysteresis, current = typ output current

### 5.4 CLOCK INPUTS

The slow clock is always supplied from an external source. It is connected to the SLOW\_CLK\_IN pin number 8 and can be a digital signal with peak to peak of 0-1.8 V.

The slow clock's frequency accuracy must be 32.768 kHz  $\pm 250$  ppm for Bluetooth usage (according to the Bluetooth specification).

The Slow Clock 32.768 kHz is mandatory to start the internal controller, otherwise the module does not start up.

### 6 BLUETOOTH FEATURES

- Support of Bluetooth2.1+EDR (Lisbon Release) up to HCI level.
- Very fast AFH algorithm for both ACL and eSCO.
- Supports typically 4 dBm Class 2 TX power w/o external PA, improving Bluetooth link robustness. Adjusting the host settings, the TX power can be increased to 10 dBm. However it is important, that the national regulations and Bluetooth specification are met.
- Digital Radio Processor (DRP) single-ended 50 ohm.
- Internal temperature detection and compensation ensures minimal variation in the RF performance over temperature.
- Flexible PCM and I2S digital audio/voice interfaces: Full flexibility of data-format (Linear, a-Law, μ-Law), data-width, data order, sampling and slot positioning, master/slave modes, high clock rates up to 15 MHz for slave mode (or 4.096 MHz for Master Mode). Lost packet concealment for improved audio.
- Proprietary low-power scan method for page and inquiry scans, achieves page and inquiry scans at 1/3rd normal power.

### 10 HOST CONTROLLER INTERFACE

The CC256X incorporates one UART module dedicated to the host controller interface (HCI) transport layer. The HCI interface transports commands, events, ACL, and synchronous data between the Bluetooth device and its host using HCI data packets.

The UART module supports H4 (4-wires) protocol with maximum baud rate of 4 Mbps for all fast clock frequencies.

After power up the baud rate is set for 115.2 kbps, irrespective of fast clock frequency. The baud rate can thereafter be changed with a vendor specific command. The CC256X responds with a Command Complete Event (still at 115.2 kbps), after which the baud rate change takes place. HCI hardware includes the following features:

• Receiver detection of break, idle, framing, FIFO overflow, and parity error conditions

• Transmitter underflow detection

• CTS/RTS hardware flow control

The interface includes four signals: TXD, RXD, CTS, and RTS. Flow control between the host and the CC256X is byte-wise by hardware.

Flow control is obtained by the following:

When the UART RX buffer of the CC256X passes the "flow control" threshold, it will set the UART\_RTS signal high to stop transmission from the host.

When the UART\_CTS signal is set high, the CC256X will stop its transmission on the interface. In case HCI\_CTS is set high in the middle of transmitting a byte, the CC256X will finish transmitting the byte and stop the transmission.

• The data position within a frame is also configurable in with 1 clock (bit) resolution and can be set independently (relative to the edge of the Frame Sync signal) for each channel.

• The Data\_In and Data\_Out bit order can be configured independently. For example; Data\_In can start with the MSB while Data\_Out starts with LSB. Each channel is separately configurable. The inverse bit order (that is, LSB first) is supported only for sample sizes up to 24 bits.

• It is not necessary for the data in and data out size to be the same length.

• The Data\_Out line is configured to 'high-Z' output between data words. Data\_Out can also be set for permanent high-Z, irrespective of data out. This allows the CC256X to be a bus slave in a multi-slave PCM environment. At powerup, Data Out is configured as high-Z.

#### 11.3 FRAME IDLE PERIOD

The codec interface has the capability for frame idle periods, where the PCM clock can "take a break" and become '0' at the end of the PCM frame, after all data has been transferred.

The CC256X supports frame idle periods both as master and slave of the PCM bus.

When CC256X is the master of the interface, the frame idle period is configurable. There are two configurable parameters:

• Clk\_ldle\_Start – Indicates the number of PCM clock cycles from the beginning of the frame until the beginning of the idle period. After Clk\_ldle\_Start clock cycles, the clock will become '0'.

• Clk\_ldle\_End – Indicates the time from the beginning of the frame till the end of the idle period. This time is given in multiples of PCM clock periods.

The delta between Clk\_Idle\_Start and Clk\_Idle\_End is the clock idle period.

For example, for PCM clock rate = 1 MHz, frame sync period = 10 kHz, Clk\_ldle\_Start = 60, Clk\_ldle\_End = 90.

Between each two frame syncs there are 70 clock cycles (instead of 100). The clock idle period starts 60 clock cycles after the beginning of the frame, and lasts 90 - 60 = 30 clock cycles. This means that the idle period ends 100 - 90 = 10 clock cycles before the end of the frame. The data transmission must end prior to the beginning of the idle period.

### 11.7 IMPROVED ALGORITHM FOR LOST PACKETS

The CC256X features an improved algorithm for improving voice quality when received voice data packets are lost. There are two options:

• Repeat the last sample – possible only for sample sizes up to 24 bits. For sample sizes >24 bits, the last byte is repeated.

• Repeat a configurable sample of 8 to 24 bits (depends on the real sample size), in order to simulate silence (or anything else) in the PCM bus. The configured sample will be written in a specific register for each channel.

The choice between those two options is configurable separately for each channel.

#### 11.8 BLUETOOTH/PCM CLOCK MISMATCH HANDLING

In Bluetooth RX, the CC256X receives RF voice packets and writes these to the codec I/F. If the CC256X receives data faster than the codec I/F output allows, an overflow will occur. In this case, the Bluetooth has two possible behaviour modes: 'allow overflow' and 'don't allow overflow'.

• If overflow is allowed, the Bluetooth will continue receiving data and will overwrite any data not yet sent to the codec.

• If overflow is not allowed, RF voice packets received when buffer is full will be discarded.

#### 11.9 BLUETOOTH INTER-IC SOUND (I2S)

The CC256X can be configured as an Inter-IC Sound (I2S) serial interface to an I2S codec device. In this mode, the CC256X audio codec interface is configured as a bidirectional, full-duplex interface, with two time slots per frame: Time slot 0 is used for the left channel audio data and time slot 1 for the right channel audio data. Each time slot is configurable up to 40 serial clock cycles in length and the frame is configurable up to 80 serial clock cycles in length.

Do not connect the microcontroller/DSP directly to the module's PCM interface, a simple RC low pass filter is recommended to improve noise suppression.

For the solder paste screen, use as a first guideline the same foot print as shown in the figure above. Solder paste screen cutouts (with slightly different dimensions) might be optimum depending on your soldering process. For example, the solder paste screen thickness chosen might have an effect. The solder screen thickness depends on your production standard 120µm to 150µm is recommended.

### IMPORTANT:

Although the bottom side of PAN131X is fully coated, no copper such as through hole vias, planes or tracks on the board component layer should be located below the PAN131X to avoid creating a short. In cases where a track or through hole via has to be located under the module, it must be kept away from PAN131X bottom pads. The PAN131X multilayer pcb contains an inner RF shielding plane, therefore no pcb shielding plane below the module is needed.

When using an onboard ceramic antenna, place the antenna on the edge of your carrier board (if allowable).

If you have any questions on these points, contact your local Panasonic representative.

Fig. 5 Condition 1: LDA21K

## 21.1 NETWORK TOPOLOGY

Bluetooth Low Energy is designed to reduce power consumption. It can be put into a sleep mode and is only activated for event activities such as sending files to a gateway, PC or mobile phone. Furthermore the maximum power consumption is set to less than 15 mA and the average power consumption is about 1 uA. The benefit of low energy consumption are short messages and establishing very fast connections (few ms). Using these techniques, energy consumption is reduced to a tenth of a Classic Bluetooth unit. Thus, a small coin cell – such as a CR2032 – is capable of powering a device for up to 10 years of operation.

To be backwards compatible with Classic Bluetooth and to be able to offer an affordable solution for very inexpensive devices, Panasonic Low Energy Bluetooth modules are offered in two versions:

| CLASSIFICATION                                | PRODUCT SPECIFICATION                                    | No.<br>DS-13xx-2400- | -102    | REV.<br>4.20 |

Dual-mode: Bluetooth Low Energy technology combined with Classic Bluetooth functionality on a single module. Dual mode devices act as gateways between these two technologies.

Single Mode: Bluetooth Low Energy technology to optimize power consumption, which is particularly useful for products powered by small batteries. These modules have embedded controllers allowing the module to operate autonomously in low cost applications that lack intelligence.

This data sheet describes dual-mode Bluetooth Low Energy technology combined with Classic Bluetooth functionality on a single module. Additional information on Panasonic's single mode products can be found by visiting <u>www.panasonic.com/rfmodules</u> or write an e-mail to <u>wireless@eu.panasonic.com</u>.

#### **21.2 MODULE FEATURES**

Fully compliant with Bluetooth 4.0:

- Optimized for proximity and sports use
- Supports up to 10 simultaneous connections
- Multiple sniff instances are tightly coupled to minimize power consumption
- Independent buffering allows a large number of multiple connections without affecting BR/EDR performance
- Includes built-in coexistence and prioritization handling for BR/EDR and LE

| CLASSIFICATION                        |         | PRODUCT SPECIFICATION                                    | No.<br>DS-13xx-2400- | 102    | REV.<br>4.20 |

#### 22 ANT PAN1317/27

ANT+ (sometimes ANT + or ANT Plus) is an interoperability function that can be added to the base ANT protocol (a proprietary wireless sensor network technology).[

#### 22.1 NETWORK TOPOLOGY

ANT<sup>™</sup> is a wireless sensor network protocol operating in the 2.4 GHz spectrum. Designed for ultra-low power, ease of use, efficiency and scalability, ANT supports peer-to-peer, star, tree and fixed mesh topologies. It provides reliable data communications, flexible and adaptive network operation and cross-talk immunity. The ANT protocol stack is compact, requiring minimal microcontroller resources to reduce system costs, lighten the computational burden and improve efficiency. Low-level security is implemented to allow user-defined network security.

PAN1317/1327 provides the first wireless, single-chip solution with dual-mode ANT and Bluetooth connectivity with inclusion of TI's CC2564 device. This solution wirelessly connects 13 million ANT-based devices to the more than 3 billion Bluetooth endpoint devices used by people every day, creating new market opportunities for companies building ANT products and Bluetooth products alike. CC2564 requires 80% less board area than a design with two single-mode solutions (one ANT+, one Bluetooth) and increases the wireless transmission range up to two times the distance of a single-mode ANT+ solution.

| CLASSIFICATION                                | PRODUCT SPECIFICATION                                    | No.<br>DS-13xx-2400- | 102     | REV.<br>4.20 |

## 22.2 MODULE FEATURES

Fully compliant with ANT protocol:

- ANT solution optimized for fitness, health and consumers use cases
- Supports up to eight simultaneous connections, various network topologies and high-resolution proximity pairing
- Includes built-in coexistence and prioritization handling for BR/EDR and ANT

| Features  | Benefits   |
|---|--|
| Dual-mode ANT+ and Bluetooth (Bluetooth v2.1 + EDR) on a single chip  | <ul> <li>Requires 80% less board area than any dual module or device design</li> <li>Reduces costs associated with incorporating two wireless technologies</li> </ul>  |
| Fully validated optimized single antenna solution   | <ul> <li>Enables simultaneous operation of ANT+ and Bluetooth without<br/>the need for two devices or modules</li> <li>Includes built-in coexistence</li> </ul>  |
| Best-in-class Bluetooth and ANT RF performance:<br>- +10 dBm Tx power with transmit power control<br>93 dBm sensitivity   | <ul> <li>Delivers twice the distance between the aggregator and ANT sensor device than competitive single-mode ANT solutions</li> <li>Enables a robust and high-throughput connection with extended range</li> </ul> |
| Support for:<br>- ANT+ ultra low power (master and slave devices)<br>- Bluetooth power saving modes (park, sniff, hold)<br>- Bluetooth ultra low power modes (deep sleep,<br>power down)                          | - Improves battery life and power efficiency of the finished product   |
| <ul> <li>Turnkey solution:</li> <li>Fully integrated module</li> <li>Complete development kit with software and documentation</li> <li>TI MSP430 hardware and software platform integration (optional)</li> </ul> | <ul> <li>Ease of integration into system allows quick time to market</li> <li>Reduces costs and time associated with certification</li> </ul>  |

# 22.3 ANT CURRENT CONSUMPTION

| Mode            | Description       | Average Current | Unit |
|-----------------|-------------------|-----------------|------|
| Rx message mode | 250msec interval  | 380             | μA   |

## 23 TRIPLE MODE (BR/EDR + BLUETOOTH LOW ENERGY OR ANT) PAN1323

The PAN1323 has been engineered to give designers the flexibility to implement Bluetooth Classic (BR/EDR), Bluetooth Low Energy or ANT into an application using a single module, reducing cost and footprint area. Refer to the paragraphs above for complete descriptions on each of the three protocols. The module is fully hardware compatible with the PAN1315, 16, 17, 25, 26 and 27. A highly efficent single RF block serves all three protocols. Protocols access the RF block using time division multiplexing. The application layer determines the priority and timing of the RF block. Customers interested in this unique module are encouraged to contact StoneStreetOne for a Bluetooth SIG certified stack. Note ANT and BLE can not be used simultaniously.

## 23.1 TRIPLE MODE CURRENT CONSUMPTION

The current consumption of the PAN1323 is a function of the protocol that the module is running at any point in time. Refer to the paragraphs above for details on current consumption for each of the three protocols or software vendor.

| CLASSIFICATION                                | PRODUCT SPECIFICATION                                    | No.<br>DS-13xx-2400-102 | REV.<br>4.20 |

## 27.2 INSTALLATION NOTES

- (1) Reflow soldering is possible twice based on the conditions in Chapter 15. Set up the temperature at the soldering portion of this product according to this reflow profile.
- (2) Carefully position the products so that their heat will not burn into printed circuit boards or affect the other components that are susceptible to heat.
- (3) Carefully locate these products so that their temperatures will not increase due to the effects of heat generated by neighboring components.
- (4) If a vinyl-covered wire comes into contact with the products, then the cover will melt and generate toxic gas, damaging the insulation. Never allow contact between the cover and these products to occur.
- (5) This product should not be mechanically stressed or vibrated when reflowed.
- (6) To repair a board by hand soldering, keep the conditions of this chapter.
- (7) Do not wash this product.
- (8) Refer to the recommended pattern when designing a board.
- (9) Pressing on parts of the metal cover or fastening objects to the metal will cause damage to the unit.

(7) These products are intended for general purpose and standard use in general electronic equipment, such as home appliances, office equipment, information and communication equipment.

### 27.4 STORAGE NOTES

- (1) The module should not be stressed mechanically during storage.
- (2) Do not store these products in the following conditions or the performance characteristics of the product, such as RF performance will be adversely affected:
  - Storage in salty air or in an environment with a high concentration of corrosive gas, such as Cl2, H2S, NH3, SO2, or NOX
  - Storage in direct sunlight
  - Storage in an environment where the temperature may be outside the range of 5°C to 35°C range, or where the humidity may be outside the 45 to 85% range.
  - Storage of the products for more than one year after the date of delivery Storage period: check the adhesive strength of the embossed tape and soldering after 6 months of storage.
- (3) Keep this product away from water, poisonous gas and corrosive gas.
- (4) This product should not be stressed or shocked when transported.
- (5) Follow the specification when stacking packed crates (max. 10).

| 27.5 SAFETY CAUTIONS   |                         |                         |              |  |  |  |  |  |
| These specifications are intended to preserve the quality assurance of products and individual components.   |                         |                         |              |  |  |  |  |  |
| Before use, check and evaluate the operation when mounted on your products. Abide<br>by these specifications, without deviation when using the products. These products may<br>short-circuit. If electrical shocks, smoke, fire, and/or accidents involving human life are<br>anticipated when a short circuit occurs, then provide the following failsafe functions, as a |                         |                         |              |  |  |  |  |  |

- (1) Ensure the safety of the whole system by installing a protection circuit and a protection device.
- (2) Ensure the safety of the whole system by installing a redundant circuit or another system to prevent a single fault causing an unsafe status.

#### 27.6 OTHER CAUTIONS

minimum.

- (1) This specification sheet is copyrighted.
- (2) Do not use the products for other purposes than those listed.
- (3) Be sure to provide an appropriate fail-safe function on your product to prevent an additional damage that may be caused by the abnormal function or the failure of the product.
- (4) This product has been manufactured without any ozone chemical controlled under the Montreal Protocol.
- (5) These products are not intended for other uses, other than under the special conditions shown below. Before using these products under such special conditions, check their performance and reliability under the said special conditions carefully to determine whether or not they can be used in such a manner.
  - In liquid, such as water, salt water, oil, alkali, or organic solvent, or in places where liquid may splash.
  - In direct sunlight, outdoors, or in a dusty environment
  - In an environment where condensation occurs.
  - In an environment with a high concentration of harmful gas (e.g. salty air, HCI, CI2, SO2, H2S, NH3, and NOX)
- (6) If an abnormal voltage is applied due to a problem occurring in other components or circuits, replace these products with new products because they may not be able to provide normal performance even if their electronic characteristics and appearances appear satisfactory.
- (7) When you have any question or uncertainty, contact Panasonic.

## 31 HISTORY FOR THIS DOCUMENT

| Revision | Date         | Modification / Remarks  |
|----------|--------------|---|
| 0.90     | 18.12.2009   | 1 <sup>st</sup> preliminary version   |
| 0.95     | 01.03.2010   | Updated Chapter 14.2 and 28.  |
| 0.96     | Not released | Change ESD Information on foot note 7 in chapter Pin Description  |
| 0.97     | 25.03.2010   | Various updates. Deleted links to TI Datasheet.   |
| 0.98     | 21.04.2010   | Updated Links Some minor changes in Chapter 8 and 9.1 and change the base for the values in Chapter 9.  |
| 0.99     | 22.10.2010   | Adopted changes according to CC2560 Datasheet. Included Interface Description, performance values. Not released.  |
| 1.00     | 04.11.2010   | 1 <sup>st</sup> internal Release.   |
| 1.01     | 03.12.2010   | Included reference to PAN1325 Application Note. AN-1325-2420-111.pdf  |
| 1.02     | 10.01.2011   | Changed wording in Chapter 34.2 "Industry Canada Certification".  |
| 1.03     | 23.05.2011   | Included DOC for PAN1315 series. Included PAN13xx ANT and BLE Addendum Rev1.x.pdf reference. Included Note for IO voltage and MLD_OUT pin.  |
| 1.04     | 02.07.2011   | Corrected wording in Chapter 34.3 European R&TTE Declaration of Conformity.   |
| 1.05     | 28.10.2011   | Including CC2560A silicon PAN1315A HW40 at Chapter 1.1, Chapter New PAN1315A and Chapter 0. Deleted ES label in Chapter   |
| 1.06     | 15.11.2011   | Added overview for the core specification and their addendums. Updated front page. Updated Related Documents.   |
| 3.00     | 11.01.2012   | Merging PAN13xx documents into this specification and correct some format   |
| 3.10     | 16.01.2012   | Minor mistakes fixed  |
| 3.20     | 29.05.2012   | DoC replaced with revised version   |
| 3.30     | 11.06.2012   | Added triple mode stack Module PAN1323, add PAN1323 to ordering and software information<br>overview, Software Block Diagram added, Bluetooth Inter IC-Sound chapter information added<br>Layout Recommandations with Antenna added, Application Note LGA added |
| 3.31     | 27.06.2012   | Added design information to use low pass filter (chapter 11.1 / 11.9) for better noise surpression when using PCM interface   |
| 3.40     | 18.07.2012   | Re-organize chapter Regulatory Information and added 2 chapters<br>1. NCC Statement (only valid for PAN1325)<br>2. Bluetooth SIG Statement<br>3. Chapter 11.9, Second Paragraph was updated<br>4. Link in Chapter 34.1.1. was fixed                             |
| 3.50     | 31.10.2012   | Changed the Overview in chapter Ordering Information<br>Included -40°C to 85°C Version ENW898xxA2 <u>K</u> F. So called K-Version.  |
| 3.60     | 17.05.2013   | Changed FCC-ID for models ENW89823xxx and ENW89827xxx.  |
| 3.70     | 31.05.2013   | DoC replaced with revised version, updated links.   |
| 3.71     | 15.08.2013   | Added component values for low pass filter on PCM interface.  |
| 3.80     | 11.11.2013   | Changed CC2567 to CC2564 in chapter ordering information.   |
| 3.90     | 03.12.2013   | Included CC2560/4B PAN1325/6B in chapter 1.1.   |
| 4.00     | 19.12.2013   | Updated chapter European R&TTE Declaration of Conformity  |
| 4.10     | 10.01.2014   | Added chapter 19 Radiation Pattern  |
| 4.20     | 28.02.2014   | Changed chapter Key Features according to EN regulations  |

### 33 GENERAL INFORMATION

© Panasonic Industrial Devices Europe GmbH.

All rights reserved.

This document may contain errors. Panasonic reserves the right to make corrections, modifications, enhancements, improvements, and other changes to its literature at any time. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to Panasonic's terms and conditions of sale supplied at the time of order acknowledgment.

If we deliver ES samples to the customer, these samples have the status Engineering Samples. This means, the design of this product is not yet concluded. Engineering Samples may be partially or fully functional, and there may be differences to be published Data Sheet.

Engineering Samples are not qualified and are not to be used for reliability testing or series production.

#### **Disclaimer:**

Customer acknowledges that samples may deviate from the Data Sheet and may bear defects due to their status of development and the lack of qualification mentioned above. Panasonic rejects any liability or product warranty for Engineering Samples. In particular, Panasonic disclaims liability for damages caused by

- the use of the Engineering Sample other than for Evaluation Purposes, particularly the installation or integration in an other product to be sold by Customer,
- deviation or lapse in function of Engineering Sample,
- improper use of Engineering Samples.

Panasonic disclaimes any liability for consequential and incidental damages. Panasonic assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using Panasonic components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards. In case of any questions, contact your local sales representative.

#### 34 REGULATORY INFORMATION

#### 34.1 FCC FOR US

#### 34.1.1 FCC Notice

The devices PAN13xx, for details refer to Chapter 28 in this document, including the antennas, which are listed in Chapter 34.1.5 of this data sheet, complies with Part 15 of the FCC Rules. The device meets the requirements for modular transmitter approval as detailed in FCC public Notice DA00-1407.transmitter. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

| CLASSIFICATION                                | PRODUCT SPECIFICATION                                    | No.<br>DS-13xx-2400- | 102     | REV.<br>4.20 |

## 34.1.2 Caution

The FCC requires the user to be notified that any changes or modifications made to this device that are not expressly approved by Panasonic Industrial Devices Europe GmbH may void the user's authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help

#### 34.1.3 Labeling Requirements

The Original Equipment Manufacturer (OEM) must ensure that FCC labelling requirements are met. This includes a clearly visible label on the outside of the OEM enclosure specifying the appropriate Panasonic FCC identifier for this product as well as the FCC Notice above. The FCC identifiers are:

FCC ID: T7V1315 for PAN1315 and PAN1325

FCC ID: T7V1316 for PAN1316, PAN1317, PAN1326 and PAN1327

This FCC identifiers are valid for all PAN13xx modules, for details, see the Chapter 28. Ordering Information. In any case the end product must be labelled exterior with "Contains FCC ID: T7V1315" (PAN1315, PAN1325) or

"Contains FCC ID: T7V1316" (PAN1316, PAN1317, PAN1326 and PAN1327).

#### 34.1.4 Antenna Warning

For the related part number of PAN13xx refer to Chapter 28. Ordering Information.

These devices are tested with a standard SMA connector and with the antennas listed below. When integrated in the OEMs product, these fixed antennas require installation preventing end-users from replacing them with non-approved antennas. Any antenna not in the following tables must be tested to comply with FCC Section 15.203 for unique antenna connectors and Section 15.247 for emissions. The FCC identifier for this device with the antenna listed below are the same (FCC ID: T7V1315 or T7V1316).

| CLASSIFICATION                                | PRODUCT SPECIFICATION                                    | No.<br>DS-13xx-24 | 00-102    | REV.<br>4.20 |

# 34.1.6 Approved Antenna List (PAN1316, PAN1317, PAN1326, PAN1327)

Note: We are able to qualify your antenna and will add to this list as that process is completed.

| Item | Part Number  | Manufacturer | Frequency Band | Туре         | Gain (dBi) |
|------|--------------|--------------|----------------|--------------|------------|
| 1    | LDA212G3110K | Murata       | 2.4GHz         | Chip-Antenna | +0.9       |

## 34.1.7 RF Exposure PAN13xx

To comply with FCC RF Exposure requirements, the Original Equipment Manufacturer (OEM) must ensure that the approved antenna in the previous tables must be installed.

The preceding statement must be included as a CAUTION statement in manuals for products operating with the approved antennas in the previous table to alert users on FCC RF Exposure compliance.

Any notification to the end user of installation or removal instructions about the integrated radio module is not allowed.

The radiated output power of PAN13xx with mounted ceramic antenna (FCC ID: T7V1315 or T7V1316) is far below the FCC radio frequency exposure limits. Nevertheless, the PAN13xx shall be used in such a manner that the potential for human contact during normal operation is minimized.

End users may not be provided with the module installation instructions. OEM integrators and end users must be provided with transmitter operating conditions for satisfying RF exposure compliance.

Il est recommandé aux fabricants d'appareils fixes, mobiles ou portables de consulter la réglementation en vigueur et de vérifier la conformité de leurs produits relativement aux limites d'exposition aux rayonnements radiofréquence ainsi qu'au débit d'absorption spécifique maximum autorisé.

Des informations pour les utilisateurs sur la réglementation Canadienne concernant l'exposition aux rayonnements RF sont disponibles sur le site <u>www.ic.gc.ca</u>.

Ce produit a été développé pour fonctionner spécifiquement avec les antennes listées dans le tableau ci-dessus, présentant un gain maximum de 1.3dBi (PAN13x6:0.9dBi).

#### 34.2.2 Labeling Requirements

The Original Equipment Manufacturer (OEM) must ensure that IC labelling requirements are met. This includes a clearly visible label on the outside of the OEM enclosure specifying the appropriate Panasonic IC identifier for this product as well as the IC Notice above. The IC identifiers are:

IC: 216Q-1315 (PAN1315, PAN1325)

IC: 216Q-1316 (PAN1316, PAN1317, PAN1326, PAN1327)

This IC identifiers are valid for all PAN13xx modules, for details, see the Chapter 28. Ordering Information. In any case the end product must be labelled exterior with "Contains IC: 216Q-1315" (PAN1315, PAN1325) or

"Contains IC: 216Q-1316" (PAN1316, PAN1317, PAN1326 and PAN1327).

de la taille du produit, l'identifiant IC est fourni dans le manuel d'installation.

#### Obligations d'étiquetage

Les fabricants d'équipements (OEM) doivent s'assurer que les obligations d'étiquetage du produit final sont remplies. Ces obligations incluent une étiquette clairement visible à l'extérieur de l'emballage externe, comportant l'identifiant IC du module Panasonic inclus, ainsi que la notification ci-dessus.

Les identifiants IC sont:

IC: 216Q-1315 (PAN1315, PAN1325)

IC: 216Q-1316 (PAN1316, PAN1317, PAN1326, PAN1327)

Ces identifiants sont valides pour tous les modules PAN13xx (Chapter 28. Ordering Information). Dans tous les cas les produits finaux doivent indiquer sur leur emballage externe une des mentions suivantes:

"Contient IC: 216Q-1315" (PAN1315, PAN1325) ou

"Contient IC: 216Q-1316" (PAN1316, PAN1317, PAN1326, PAN1327).

## 34.3 EUROPEAN R&TTE DECLARATION OF CONFORMITY

All modules described in this data sheet comply to the following standards:

| - EN 60950-1: 2006     | For article 3.1 (a) : Health and Safety of the User   |
|------------------------|---|
| - EN 301 489-17 V2.2.1 | For article 3.1 (b) : Electromagnetic Compatibility   |
| - EN 300 328 V1.8.1    | For article 3.2 : Effective use of spectrum allocated |

As a result of the conformity assessment procedure described in Annex III of the Directive 1999/5/EC, the end-customer equipment should be labelled as follows:

# C€

PAN13xx and their versions in the specified reference design can be used in the following countries: Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, The Netherlands, the United Kingdom, Switzerland, and Norway.

### 35 LIFE SUPPORT POLICY

This Panasonic product is not designed for use in life support appliances, devices, or systems where malfunction can reasonably be expected to result in a significant personal injury to the user, or as a critical component in any life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness. Panasonic customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Panasonic for any damages resulting.
