# RENESAS HD74ALVCH16269

12-bit to 24-bit Registered Bus Transceivers with 3-state Outputs

> REJ03D0046-0200Z (Previous ADE-205-136(Z)) Rev.2.00 Oct.02.2003

#### Description

The HD74ALVCH16269 is used in applications where two separate ports must be multiplexed onto, or demultiplexed from, a single port. The device is particularly suitable as an interface between synchronous DRAMs and high speed microprocessors. Data is stored in the internal B port registers on the low to high transition of the clock (CLK) input when the appropriate clock enable (CLKENA) inputs are low. Proper control of these inputs allows two sequential 12-bit words to be presented as a 24-bit word on the B port. For data transfer in the B to A direction, a single storage register is provided. The select (SEL) line selects 1B or 2B data for the A outputs. The register on the A output permits the fastest possible data transfer, thus extending the period that the data is valid on the bus. The control terminals are registered so that all transactions are synchronous with CLK. Data flow is controlled by the active low output enables ( $\overline{OEA}$ ,  $\overline{OEB1}$ ,  $\overline{OEB2}$ ). Active bus hold circuitry is provided to hold unused or floating data inputs at a valid logic level.

#### Features

- $V_{CC} = 2.3 \text{ V} \text{ to } 3.6 \text{ V}$
- Typical V<sub>OL</sub> ground bounce  $< 0.8 \text{ V} (@V_{CC} = 3.3 \text{ V}, \text{Ta} = 25^{\circ}\text{C})$
- Typical  $V_{OH}$  undershoot > 2.0 V (@V<sub>CC</sub> = 3.3 V, Ta = 25°C)
- High output current  $\pm 24$  mA (@V<sub>CC</sub> = 3.0 V)
- Bus hold on data inputs eliminates the need for external pullup / pulldown resistors

### **Function Table**

Inputs			Outputs	Outputs			
CLK	OEA	OEB	А	1B, 2B			
$\uparrow$	Н	Н	Z	Z			
$\uparrow$	Н	L	Z	Active			
$\uparrow$	L	Н	Active	Z			
$\uparrow$	L	L	Active	Active			

#### **Output enable**

Inputs				Outputs		
CLKENA1	<b>CLKENA2</b>	CLK	Α	1B	2B	
Н	Н	Х	Х	1B <sub>0</sub> *1	2B <sub>0</sub> <sup>*1</sup>	
L	Х	$\uparrow$	L		X	
L	Х	$\uparrow$	Н	Н	Х	
Х	L	$\uparrow$	L	X	L	
Х	L	$\uparrow$	Н	X	Н	

A-to-B	stor	age (Ō	EB =	L)

Inputs		C C		Output A	
CLK	SEL	1B	2B		
Х	н	Х	X	A <sub>0</sub> *1	
Х	L	Х	х	A <sub>0</sub> *1	
$\uparrow$	H	L L	Х	L	
$\uparrow$	Н	Н	Х	Н	
$\uparrow$		X	L	L	
↑	L	x	Н	Н	

#### **B-to-A storage** ( $\overline{OEA} = L$ )

H : High level

L : Low level

X : Immaterial

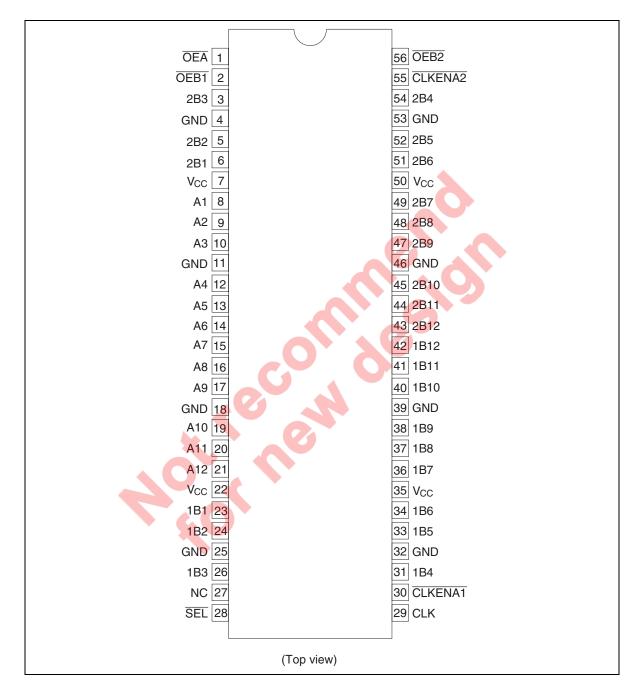

Z : High impedance

 $\uparrow$  : Low to high transition

Note: 1. Output level before the indicated steady state input conditions were established.

#### **Pin Arrangement**

### **Absolute Maximum Ratings**

Item	Symbol	Ratings	Unit	Conditions
Supply voltage	V <sub>CC</sub>	-0.5 to 4.6	V	
Input voltage *1, 2	VI	-0.5 to 4.6	V	Except I/O ports
		–0.5 to V <sub>CC</sub> +0.5		I/O ports
Output voltage *1, 2	Vo	–0.5 to V <sub>CC</sub> +0.5	V	
Input clamp current	I <sub>IK</sub>	-50	mA	V <sub>1</sub> < 0
Output clamp current	I <sub>ОК</sub>	±50	mA	$V_{\rm O}$ < 0 or $V_{\rm O}$ > $V_{\rm CC}$
Continuous output current	Io	±50	mA	$V_{\rm O}$ = 0 to $V_{\rm CC}$
		±100		
Maximum power dissipation at Ta = $55^{\circ}$ C (in still air) <sup>*3</sup>	P <sub>T</sub>	1	W	TSSOP
Storage temperature	Tstg	-65 to 150	°C	

Notes: Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute maximum rated conditions for extended periods may affect device reliability.

- 1. The input and output negative voltage ratings may be exceeded if the input and output clamp current ratings are observed.
- 2. This value is limited to 4.6 V maximum.
- 3. The maximum package power dissipation is calculated using a junction temperature of 150°C and a board trace length of 750 mils.

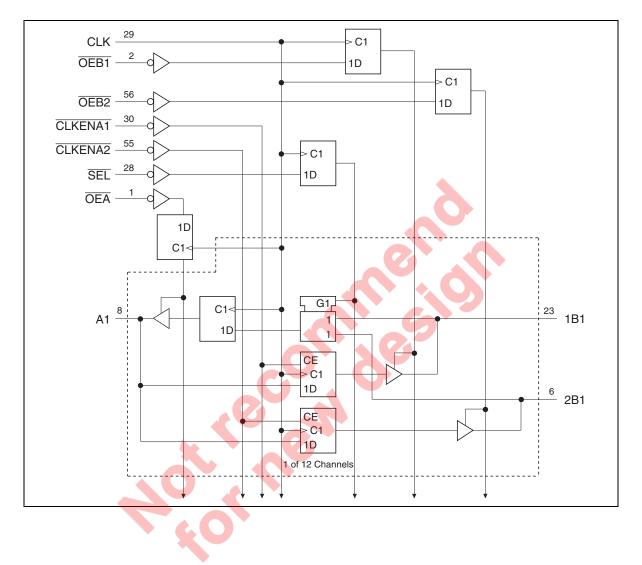

Item	Symbol	Min	Max	Unit	Conditions
Supply voltage	V <sub>cc</sub>	2.3	3.6	V	
Input voltage	VI	0	Vcc	V	
Output voltage	Vo	0	V <sub>CC</sub>	V	
High level output current	I <sub>OH</sub>		-12	mA	V <sub>CC</sub> = 2.3 V
		_	-12		V <sub>CC</sub> = 2.7 V
		_	-24		V <sub>CC</sub> = 3.0 V
Low level output current	I <sub>OL</sub>	_	12	mA	V <sub>CC</sub> = 2.3 V
			12		V <sub>CC</sub> = 2.7 V
			24		V <sub>CC</sub> = 3.0 V
Input transition rise or fall rate	$\Delta t$ / $\Delta v$	0	10	ns / V	
Operating temperature	Та	-40	85	°C	

## **Recommended Operating Conditions**

Note: Unused control inputs must be held high or low to prevent them from floating.

# Logic Diagram

### **Electrical Characteristics**

#### $(Ta = -40 \text{ to } 85^{\circ}C)$

Item	Symbol	$V_{cc}$ (V) $^{*1}$	Min	Max	Unit	Test Conditions
Input voltage	V <sub>IH</sub>	2.3 to 2.7	1.7	_	V

#### Keep safety first in your circuit designs!

Regense to find in your circuit designs: 1. Renesas Technology Corp. puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of nonflammable material or (iii) prevention against any malfunction or mishap.

- Notes regarding these materials
  1. These materials are intended as a reference to assist our customers in the selection of the Renesas Technology Corp. product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Renesas Technology Corp. or a third party.
  2. Renesas Technology Corp. assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.
  3. All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Renesas Technology Corp. or an authorized Renesas Technology Corp. product distributor for the latest product information described here may contain technical inaccuracies or typographical errors. Renesas Technology Corp. assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors. Please also pay attention to information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Renesas Technology Corp. assumes no responsibility for any damage or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Renesas Technology Corp. product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Renesas Technology Corp. assumes no responsibility for any damage ore materials, including product data, diagrams, charts,
