

ISO7840x High-Performance, 8000-V_{PK} Reinforced Quad-Channel Digital Isolator

1 Features

- Signaling Rate: Up to 100 Mbps
- Wide Supply Range: 2.25 V to 5.5 V
- 2.25-V to 5.5-V Level Translation
- Wide Temperature Range: –55°C to +125°C
- Low-Power Consumption, Typical 1.7 mA per Channel at 1 Mbps
- Low Propagation Delay: 11 ns Typical (5-V Supplies)
- Industry leading CMTI (Min): ±100 kV/μs
- Robust Electromagnetic Compatibility (EMC)
- System-Level ESD, EFT, and Surge Immunity
- Low Emissions
- Isolation Barrier Life: >40 Years
- Wide Body SOIC-16 Package and Extra-Wide Body SOIC-16 Package Options
- Safety and Regulatory Approvals:
 - 8000-V_{PK} Reinforced Isolation per DIN V VDE V 0884-10 (VDE V 0884-10):2006-12
 - 5.7-kV_{RMS} Isolation for 1 Minute per UL 1577
 - CSA Component Acceptance Notice 5A, IEC 60950-1 and IEC 60601-1 End Equipment Standards
 - CQC Certification per GB4943.1-2011
 - TUV Certification per EN 61010-1 and EN 60950-1
 - All DW Package Certifications Complete; DWW Package Certifications Complete per UL, VDE, TUV and Planned for CSA and CQC

2 Applications

- Industrial Automation
- Motor Control
- Power Supplies
- Solar Inverters
- Medical Equipment
- Hybrid Electric Vehicles

3 Description

The ISO7840x device is a high-performance, quad-channel digital isolator with a 8000-V_{PK} isolation voltage. This device has reinforced isolation certifications according to VDE, CSA, CQC, and TUV. The isolator provides high electromagnetic immunity and low emissions at low-power consumption, while isolating CMOS or LVCMOS digital I/Os. Each isolation channel has a logic input and output buffer separated by a silicon-dioxide (SiO₂) insulation barrier.

This device comes with enable pins that can be used to put the respective outputs in high impedance for multi-master driving applications and to reduce power consumption. The ISO7840 device has four forward and zero reverse-direction channels. If the input power or signal is lost, the default output is *high* for the ISO7840 device and *low* for the ISO7840F device. See the [Device Functional Modes](#) section for further details.

Used in conjunction with isolated power supplies, this device helps prevent noise currents on a data bus or other circuits from entering the local ground and interfering with or damaging sensitive circuitry. Through innovative chip design and layout techniques, electromagnetic compatibility of the ISO7840 device has been significantly enhanced to ease system-level ESD, EFT, surge, and emissions compliance.

The ISO7840 device is available in 16-pin SOIC wide-body (DW) and extra-wide body (DWW) packages.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
ISO7840	DW (16)	10.30 mm x 7.50 mm
ISO7840F	DWW (16)	10.30 mm x 14.0 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

Simplified Schematic

V_{CCI} and GNDI are supply and ground connections respectively for the input channels.

V_{CCO} and GNDO are supply and ground connections respectively for the output channels.

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision A (March 2016) to Revision B

Page

• Added Features 2.25 V to 5.5 V Level Translation	1
• Changed the number of years for the isolation barrier life in the Features section	1
• VDE certification is now complete	1
• Changed V_{CCO} to V_{CCI} for the minimum value of the input threshold voltage hysteresis parameter in all electrical characteristics tables	7
• Added V_{CM} to the test condition of the common-mode transient immunity parameter in all electrical characteristics tables	7
• Added the lifetime projection graphs for DW and DWW packages to the Safety Limiting Values section	17

Changes from Original (July 2015) to Revision A

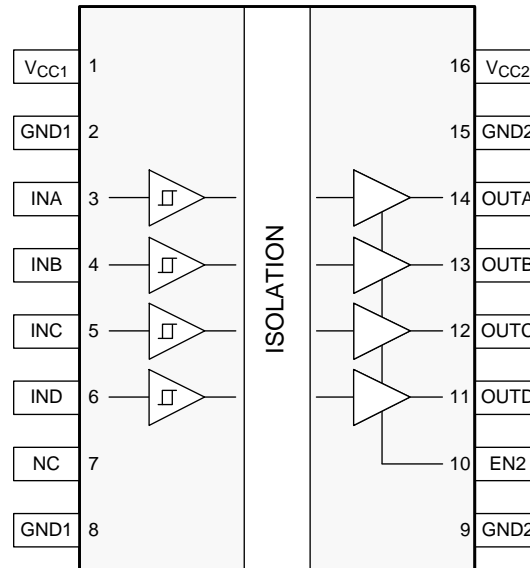

Page

• Changed Features From: Industry leading CMTI To: Industry leading CMTI (MIN)	1
• Changed the Safety and Regulatory Approvals list of Features	1
• Added Features "TUV Certification per EN 61010-1 and EN 60950-1"	1
• Changed text in the first paragraph of the Description From: "certifications according to VDE, CSA, and CQC". To: "certifications according to VDE, CSA, CQC, and TUV."	1
• Added the DWW pinout image	4
• Added the DWW package to the Thermal Information	6
• Changed the Supply Current section of Electrical Characteristics—5-V Supply	7
• Changed the Supply Current section of Electrical Characteristics—5-V Supply	8
• Changed the Supply Current section of Electrical Characteristics—2.5-V Supply	9
• Changed Table 2 , added the 16-DWW Package information	16
• Added Note: "This coupler..." to the High Voltage Feature Description section	16

- Added the DWW package information, added "Climatic category", and deleted Note 1 in [Table 3](#) 17
- Added Note 1 to [Table 3](#) 17
- Changed [Table 4](#) 18
- Added the TUV and DWW package information to the *Regulatory Information* section and [Table 5](#). Deleted Note 1 in [Table 5](#)..... 18
- Changed [Figure 17](#) 20

5 Pin Configuration and Functions

DW and DWW Packages
16-Pin SOIC
Top View

Pin Functions

PIN		I/O	DESCRIPTION
NAME	NO.		
EN2	10	I	Output enable 2. Output pins on side 2 are enabled when EN2 is high or open and in high-impedance state when EN2 is low.
GND1	2	—	Ground connection for V_{CC1}
	8		
GND2	9	—	Ground connection for V_{CC2}
	15		
INA	3	I	Input, channel A
INB	4	I	Input, channel B
INC	5	I	Input, channel C
IND	6	I	Input, channel D
NC	7	—	Not connected
OUTA	14	O	Output, channel A
OUTB	13	O	Output, channel B
OUTC	12	O	Output, channel C
OUTD	11	O	Output, channel D
V_{CC1}	1	—	Power supply, V_{CC1}
V_{CC2}	16	—	Power supply, V_{CC2}

6 Specifications

6.1 Absolute Maximum Ratings

See ⁽¹⁾

		MIN	MAX	UNIT
V_{CC1} , V_{CC2}	Supply voltage ⁽²⁾	-0.5	6	V
Voltage	INx	-0.5	$V_{CCX} + 0.5$ ⁽³⁾	V
	OUTx	-0.5	$V_{CCX} + 0.5$ ⁽³⁾	
	EN2	-0.5	$V_{CCX} + 0.5$ ⁽³⁾	
I_O	Output current	-15	15	mA
	Surge immunity		12.8	kV
T_{stg}	Storage temperature	-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values except differential I/O bus voltages are with respect to the local ground terminal (GND1 or GND2) and are peak voltage values.
- (3) Maximum voltage must not exceed 6 V

6.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins ⁽¹⁾	±6000
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins ⁽²⁾	±1500

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

		MIN	NOM	MAX	UNIT
V_{CC1} , V_{CC2}	Supply voltage	2.25		5.5	V
I_{OH}	High-level output current	$V_{CCO}^{(1)} = 5\text{ V}$		-4	mA
		$V_{CCO}^{(1)} = 3.3\text{ V}$		-2	
		$V_{CCO}^{(1)} = 2.5\text{ V}$		-1	
I_{OL}	Low-level output current	$V_{CCO}^{(1)} = 5\text{ V}$		4	mA
		$V_{CCO}^{(1)} = 3.3\text{ V}$		2	
		$V_{CCO}^{(1)} = 2.5\text{ V}$		1	
V_{IH}	High-level input voltage	$0.7 \times V_{CCI}^{(1)}$		$V_{CCI}^{(1)}$	V
V_{IL}	Low-level input voltage	0		$0.3 \times V_{CCI}^{(1)}$	V
DR	Signaling rate	0		100	Mbps
T_J	Junction temperature ⁽²⁾	-55		150	°C
T_A	Ambient temperature	-55	25	125	°C

- (1) V_{CCI} = Input-side V_{CC} ; V_{CCO} = Output-side V_{CC} .
- (2) To maintain the recommended operating conditions for T_J , see [Thermal Information](#).

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		ISO7840		UNIT
		DW (SOIC)	DWW (SOIC)	
		16 Pins	16 Pins	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	78.9	78.9	°C/W
$R_{\theta JC(top)}$	Junction-to-case(top) thermal resistance	41.6	41.1	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	43.6	49.5	°C/W
ψ_{JT}	Junction-to-top characterization parameter	15.5	15.2	°C/W
ψ_{JB}	Junction-to-board characterization parameter	43.1	48.8	°C/W
$R_{\theta JC(bottom)}$	Junction-to-case(bottom) thermal resistance	N/A	N/A	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

6.5 Power Dissipation Characteristics

		VALUE	UNIT
P_D	Maximum power dissipation by ISO7840x	200	mW
P_{D1}	Maximum power dissipation by side-1 of ISO7840x	40	
P_{D2}	Maximum power dissipation by side-2 of ISO7840x	160	

$V_{CC1} = V_{CC2} = 5.5\text{ V}$, $T_J = 150^\circ\text{C}$,
 $C_L = 15\text{ pF}$, input a 50 MHz 50% duty cycle square wave

6.6 Electrical Characteristics—5-V Supply

 $V_{CC1} = V_{CC2} = 5\text{ V} \pm 10\%$ (over recommended operating conditions unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
V_{OH}	High-level output voltage $I_{OH} = -4\text{ mA}$; see Figure 7	$V_{CCO} - 0.4$	$V_{CCO} - 0.2$		V
V_{OL}	Low-level output voltage $I_{OL} = 4\text{ mA}$; see Figure 7		0.2	0.4	V
$V_{I(HYS)}$	Input threshold voltage hysteresis	$0.1 \times V_{CC1}$			V
I_{IH}	High-level input current $V_{IH} = V_{CC1}$ at INx or EN2			10	μA
I_{IL}	Low-level input current $V_{IL} = 0\text{ V}$ at INx or EN2	-10			μA
CMTI	Common-mode transient immunity $V_I = V_{CC1}$ or 0 V , $V_{CM} = 1500\text{ V}$; see Figure 10	100			kV/ μs

6.7 Supply Characteristics—5-V Supply

 $V_{CC1} = V_{CC2} = 5\text{ V} \pm 10\%$ (over recommended operating conditions unless otherwise noted)

PARAMETER	TEST CONDITIONS		SUPPLY CURRENT	MIN	TYP	MAX	UNIT	
Supply current	Disable	$EN2 = 0\text{ V}$, $V_I = 0\text{ V}$ (ISO7840F), $V_I = V_{CC1}^{(1)}$ (ISO7840)	I_{CC1}		1.3	2	mA	
			I_{CC2}		0.4	0.6		
		$EN2 = 0\text{ V}$, $V_I = V_{CC1}$ (ISO7840F), $V_I = 0\text{ V}$ (ISO7840) $EN2 = 0\text{ V}$	I_{CC1}		6	8.5	mA	
			I_{CC2}		0.4	0.6		
	DC signal	$V_I = 0\text{ V}$ (ISO7840F), $V_I = V_{CC1}$ (ISO7840)	I_{CC1}		1.3	2	mA	
			I_{CC2}		2.2	3.1		
		$V_I = V_{CC1}$ (ISO7840F), $V_I = 0\text{ V}$ (ISO7840)	I_{CC1}		5.9	8.6	mA	
			I_{CC2}		2.5	3.3		
	All channels switching with square wave clock input; $C_L = 15\text{ pF}$	1 Mbps		I_{CC1}		3.6	5.3	mA
				I_{CC2}		2.6	3.7	
		10 Mbps		I_{CC1}		3.8	5.4	mA
				I_{CC2}		4.5	5.9	
100 Mbps		DW package	I_{CC1}		5.1	5.9	mA	
			I_{CC2}		23.8	27.4		
		DWW package	I_{CC1}		5.1	5.9	mA	
			I_{CC2}		23.8	28.5		

 (1) V_{CC1} = Input-side V_{CC} ; V_{CCO} = Output-side V_{CC} .

6.8 Electrical Characteristics—3.3-V Supply

 $V_{CC1} = V_{CC2} = 3.3\text{ V} \pm 10\%$ (over recommended operating conditions unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
V_{OH}	High-level output voltage	$I_{OH} = -2\text{ mA}$; see Figure 7	$V_{CCO} - 0.4$	$V_{CCO} - 0.2$		V
V_{OL}	Low-level output voltage	$I_{OL} = 2\text{ mA}$; see Figure 7		0.2	0.4	V
$V_{I(HYS)}$	Input threshold voltage hysteresis		$0.1 \times V_{CCI}$			V
I_{IH}	High-level input current	$V_{IH} = V_{CC1}$ at INx or EN2			10	μA
I_{IL}	Low-level input current	$V_{IL} = 0\text{ V}$ at INx or EN2	-10			μA
CMTI	Common-mode transient immunity	$V_I = V_{CC1}$ or 0 V , $V_{CM} = 1500\text{ V}$; see Figure 10	100			kV/ μs

6.9 Supply Current Characteristics—3.3-V Supply

 $V_{CC1} = V_{CC2} = 3.3\text{ V} \pm 10\%$ (over recommended operating conditions unless otherwise noted)

PARAMETER	TEST CONDITIONS		SUPPLY CURRENT	MIN	TYP	MAX	UNIT	
Supply current	Disable	EN2 = 0 V, $V_I = 0\text{ V}$ (ISO7840F), $V_I = V_{CCI}^{(1)}$ (ISO7840)	I_{CC1}		1.3	2	mA	
			I_{CC2}		0.4	0.6		
		DC signal	$V_I = 0\text{ V}$ (ISO7840F), $V_I = V_{CCI}^{(1)}$ (ISO7840)	I_{CC1}		1.3	2	mA
				I_{CC2}		2.2	3	
	All channels switching with square wave clock input; $C_L = 15\text{ pF}$	1 Mbps	$V_I = V_{CCI}^{(1)}$ (ISO7840F), $V_I = 0\text{ V}$ (ISO7840)	I_{CC1}		3.6	5.3	mA
				I_{CC2}		2.5	3.6	
		10 Mbps		I_{CC1}		3.7	5.3	mA
				I_{CC2}		3.9	5.1	
		100 Mbps		I_{CC1}		4.5	5.8	mA
				I_{CC2}		17.7	20.6	

(1) V_{CCI} = Input-side V_{CC} ; V_{CCO} = Output-side V_{CC} .

6.10 Electrical Characteristics—2.5-V Supply

 $V_{CC1} = V_{CC2} = 2.5\text{ V} \pm 10\%$ (over recommended operating conditions unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
V_{OH}	High-level output voltage $I_{OH} = -1\text{ mA}$; see Figure 7	$V_{CCO} - 0.4$	$V_{CCO} - 0.2$		V
V_{OL}	Low-level output voltage $I_{OL} = 1\text{ mA}$; see Figure 7		0.2	0.4	V
$V_{I(HYS)}$	Input threshold voltage hysteresis	$0.1 \times V_{CC1}$			V
I_{IH}	High-level input current $V_{IH} = V_{CC1}$ at INx or EN2				10 μA
I_{IL}	Low-level input current $V_{IL} = 0\text{ V}$ at INx or EN2	-10			μA
CMTI	Common-mode transient immunity $V_I = V_{CC1}$ or 0 V, $V_{CM} = 1500\text{ V}$; see Figure 10	100			kV/ μs

6.11 Supply Current Characteristics—2.5-V Supply

 $V_{CC1} = V_{CC2} = 2.5\text{ V} \pm 10\%$ (over recommended operating conditions unless otherwise noted)

PARAMETER	TEST CONDITIONS	SUPPLY CURRENT	MIN	TYP	MAX	UNIT
Supply current	Disable	$EN2 = 0\text{ V}$, $V_I = 0\text{ V}$ (Devices with suffix F), $V_I = V_{CC1}^{(1)}$ (Devices without suffix F)	I_{CC1}	1.3	2	mA
			I_{CC2}	0.4	0.6	
		$EN2 = 0\text{ V}$, $V_I = V_{CC1}^{(1)}$ (Devices with suffix F), $V_I = 0\text{ V}$ (Devices without suffix F)	I_{CC1}	6	8.5	mA
			I_{CC2}	0.4	0.6	
	DC signal	$V_I = 0\text{ V}$ (Devices with suffix F), $V_I = V_{CC1}^{(1)}$ (Devices without suffix F)	I_{CC1}	1.3	2	mA
			I_{CC2}	2.2	3	
		$V_I = V_{CC1}^{(1)}$ (Devices with suffix F), $V_I = 0\text{ V}$ (Devices without suffix F)	I_{CC1}	5.9	8.6	mA
			I_{CC2}	2.4	3.3	
	All channels switching with square wave clock input; $C_L = 15\text{ pF}$	1 Mbps	I_{CC1}	3.6	5.3	mA
			I_{CC2}	2.5	3.5	
		10 Mbps	I_{CC1}	3.7	5.3	mA
			I_{CC2}	3.5	4.7	
100 Mbps		I_{CC1}	4.4	5.7	mA	
		I_{CC2}	13.9	16.4		

(1) V_{CC1} = Input-side V_{CC} ; V_{CCO} = Output-side V_{CC} .

6.12 Switching Characteristics—5-V Supply

 $V_{CC1} = V_{CC2} = 5\text{ V} \pm 10\%$ (over recommended operating conditions unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
t_{PLH} , t_{PHL}	Propagation delay time	See Figure 7	6	11	16	ns
PWD	Pulse width distortion ⁽¹⁾ $ t_{PHL} - t_{PLH} $		0.55	4.1	ns	
$t_{sk(o)}$	Channel-to-channel output skew time ⁽²⁾	Same-direction channels			2.5	ns
$t_{sk(pp)}$	Part-to-part skew time ⁽³⁾				4.5	ns
t_r	Output signal rise time	See Figure 7		1.7	3.9	ns
t_f	Output signal fall time			1.9	3.9	ns
t_{PHZ}	Disable propagation delay, high-to-high impedance output	See Figure 8		12	20	ns
t_{PLZ}	Disable propagation delay, low-to-high impedance output			12	20	ns
t_{PZH}	Enable propagation delay, high impedance-to-high output for ISO7840			10	20	ns
	Enable propagation delay, high impedance-to-high output for ISO7840F			2	2.5	μs
t_{PZL}	Enable propagation delay, high impedance-to-low output for ISO7840			2	2.5	μs
	Enable propagation delay, high impedance-to-low output for ISO7840F			10	20	ns
t_{is}	Default output delay time from input power loss	Measured from the time V_{CC} goes below 1.7 V. See Figure 9		0.2	9	μs
t_{ie}	Time interval error	$2^{16} - 1$ PRBS data at 100 Mbps		0.90		ns

- (1) Also known as pulse skew.
- (2) $t_{sk(o)}$ is the skew between outputs of a single device with all driving inputs connected together and the outputs switching in the same direction while driving identical loads.
- (3) $t_{sk(pp)}$ is the magnitude of the difference in propagation delay times between any terminals of different devices switching in the same direction while operating at identical supply voltages, temperature, input signals and loads.

6.13 Switching Characteristics—3.3-V Supply

 $V_{CC1} = V_{CC2} = 3.3\text{ V} \pm 10\%$ (over recommended operating conditions unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
t_{PLH} , t_{PHL}	Propagation delay time	See Figure 7	6	10.8	16	ns
PWD	Pulse width distortion ⁽¹⁾ $ t_{PHL} - t_{PLH} $		0.7	4.2	ns	
$t_{sk(o)}$	Channel-to-channel output skew time ⁽²⁾	Same-direction channels			2.2	ns
$t_{sk(pp)}$	Part-to-part skew time ⁽³⁾				4.5	ns
t_r	Output signal rise time	See Figure 7		0.8	3	ns
t_f	Output signal fall time			0.8	3	ns
t_{PHZ}	Disable propagation delay, high-to-high impedance output	See Figure 8		17	32	ns
t_{PLZ}	Disable propagation delay, low-to-high impedance output			17	32	ns
t_{PZH}	Enable propagation delay, high impedance-to-high output for ISO7840			17	32	ns
	Enable propagation delay, high impedance-to-high output for ISO7840F			2	2.5	μs
t_{PZL}	Enable propagation delay, high impedance-to-low output for ISO7840			2	2.5	μs
	Enable propagation delay, high impedance-to-low output for ISO7840F			17	32	ns
t_{is}	Default output delay time from input power loss	Measured from the time V_{CC} goes below 1.7 V. See Figure 9		0.2	9	μs
t_{ie}	Time interval error	$2^{16} - 1$ PRBS data at 100 Mbps		0.91		ns

- (1) Also known as Pulse Skew.
- (2) $t_{sk(o)}$ is the skew between outputs of a single device with all driving inputs connected together and the outputs switching in the same direction while driving identical loads.
- (3) $t_{sk(pp)}$ is the magnitude of the difference in propagation delay times between any terminals of different devices switching in the same direction while operating at identical supply voltages, temperature, input signals and loads.

6.14 Switching Characteristics—2.5-V Supply

 $V_{CC1} = V_{CC2} = 2.5\text{ V} \pm 10\%$ (over recommended operating conditions unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
t_{PLH} , t_{PHL}	Propagation delay time	See Figure 7	7.5	11.7	17.5	ns
PWD	Pulse width distortion ⁽¹⁾ $ t_{PHL} - t_{PLH} $		0.66	4.2		ns
$t_{sk(o)}$	Channel-to-channel output skew time ⁽²⁾	Same-direction Channels			2.2	ns
$t_{sk(pp)}$	Part-to-part skew time ⁽³⁾				4.5	ns
t_r	Output signal rise time	See Figure 7		1	3.5	ns
t_f	Output signal fall time			1.2	3.5	ns
t_{PHZ}	Disable propagation delay, high-to-high impedance output	See Figure 8		22	45	ns
t_{PLZ}	Disable propagation delay, low-to-high impedance output			22	45	ns
t_{PZH}	Enable propagation delay, high impedance-to-high output for ISO7840			18	45	ns
	Enable propagation delay, high impedance-to-high output for ISO7840F			2	2.5	μs
t_{PZL}	Enable propagation delay, high impedance-to-low output for ISO7840			2	2.5	μs
	Enable propagation delay, high impedance-to-low output for ISO7840F			18	45	ns
t_{fs}	Default output delay time from input power loss	Measured from the time V_{CC} goes below 1.7 V. See Figure 9		0.2	9	μs
t_{ie}	Time interval error	$2^{16} - 1$ PRBS data at 100 Mbps		0.91		ns

- (1) Also known as pulse skew.
- (2) $t_{sk(o)}$ is the skew between outputs of a single device with all driving inputs connected together and the outputs switching in the same direction while driving identical loads.
- (3) $t_{sk(pp)}$ is the magnitude of the difference in propagation delay times between any terminals of different devices switching in the same direction while operating at identical supply voltages, temperature, input signals and loads.

8 Detailed Description

8.1 Overview

The ISO7840 device uses an ON-OFF Keying (OOK) modulation scheme to transmit the digital data across a silicon-dioxide based isolation barrier. The transmitter sends a high-frequency carrier across the barrier to represent one digital state and sends no signal to represent the other digital state. The receiver demodulates the signal after advanced signal conditioning and produces the output through a buffer stage. If the EN pin is low then the output goes to high impedance. The ISO7840 device also incorporates advanced circuit techniques to maximize the CMTI performance and minimize the radiated emissions because of the high-frequency carrier and IO buffer switching. The conceptual block diagram of a digital capacitive isolator, [Figure 11](#), shows a functional block diagram of a typical channel.

8.2 Functional Block Diagram

Figure 11. Conceptual Block Diagram of a Digital Capacitive Isolator

[Figure 12](#) shows a conceptual detail of how the ON-OFF keying scheme works.

Figure 12. On-Off Keying (OOK) Based Modulation Scheme

8.3 Feature Description

Table 1 lists the device features.

Table 1. Device Features

PART NUMBER	CHANNEL DIRECTION	RATED ISOLATION	MAXIMUM DATA RATE	DEFAULT OUTPUT
ISO7840	4 Forward,	5700 V _{RMS} / 8000 V _{PK} ⁽¹⁾	100 Mbps	High
	0 Reverse			
ISO7840F	4 Forward,	5700 V _{RMS} / 8000 V _{PK} ⁽¹⁾	100 Mbps	Low
	0 Reverse			

(1) See [Regulatory Information](#) for detailed isolation ratings.

8.3.1 High Voltage Feature Description

NOTE

This coupler is suitable for 'safe electrical insulation' only within the safety ratings. Compliance with the safety ratings shall be ensured by means of suitable protective circuits.

Table 2. Package Insulation and Safety-Related Specifications over recommended operating conditions (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
CLR	External clearance	Shortest terminal-to-terminal distance through air	16-DW Package	8		mm
			16-DWW Package	14.5		
CPG	External creepage	Shortest terminal-to-terminal distance across the package surface	16-DW Package	8		mm
			16-DWW Package	14.5		
CTI	Comparative tracking index	DIN EN 60112 (VDE 0303-11); IEC 60112; UL 746A	600			V
R _{IO}	Isolation resistance, input to output ⁽¹⁾	V _{IO} = 500 V, T _A = 25°C	10 ¹²			Ω
		V _{IO} = 500 V, 100°C ≤ T _A ≤ max	10 ¹¹			Ω
C _{IO}	Barrier capacitance, input to output ⁽¹⁾	V _{IO} = 0.4 × sin(2πft), f = 1 MHz		2		pF
C _I	Input capacitance ⁽²⁾	V _I = V _{CC} /2 + 0.4 × sin(2πft), f = 1 MHz, V _{CC} = 5 V		2		pF

(1) All pins on each side of the barrier tied together creating a two-terminal device.

(2) Measured from input pin to ground.

NOTE

Creepage and clearance requirements should be applied according to the specific equipment isolation standards of an application. Care should be taken to maintain the creepage and clearance distance of a board design to ensure that the mounting pads of the isolator on the printed-circuit board do not reduce this distance.

Creepage and clearance on a printed-circuit board become equal in certain cases. Techniques such as inserting grooves and/or ribs on a printed circuit board are used to help increase these specifications.

Table 3. Insulation Characteristics

PARAMETER		TEST CONDITIONS	SPECIFICATION		UNIT
			DW	DWW	
DTI	Distance through the insulation	Minimum internal gap (internal clearance)	>21	>21	µm
V _{IOWM}	Maximum rated working isolation voltage	Time dependent dielectric breakdown (TDDB) Test, see Figure 13 and Figure 14	1500	2000	V _{RMS}

8.3.1.2 Safety Limiting Values

Safety limiting intends to minimize potential damage to the isolation barrier upon failure of input or output circuitry. A failure of the I/O can allow low resistance to ground or the supply and, without current limiting, dissipate sufficient power to overheat the die and damage the isolation barrier potentially leading to secondary system failures.

Table 6. Safety Limiting Values

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
I _S Safety input, output, or supply current	R _{θJA} = 78.9°C/W, V _I = 5.5 V, T _J = 150°C, T _A = 25°C			288	mA
	R _{θJA} = 78.9°C/W, V _I = 3.6 V, T _J = 150°C, T _A = 25°C			440	
	R _{θJA} = 78.9°C/W, V _I = 2.75 V, T _J = 150°C, T _A = 25°C			576	
P _S Safety input, output, or total power	R _{θJA} = 78.9°C/W, T _J = 150°C, T _A = 25°C			1584	mW
T _S Maximum safety temperature				150	°C

The maximum safety temperature is the maximum junction temperature specified for the device. The power dissipation and junction-to-air thermal impedance of the device installed in the application hardware determines the junction temperature. The assumed junction-to-air thermal resistance in the [Thermal Information](#) table is that of a device installed on a High-K test board for leaded surface mount packages. The power is the recommended maximum input voltage times the current. The junction temperature is then the ambient temperature plus the power times the junction-to-air thermal resistance.

8.4 Device Functional Modes

Table 7 lists the ISO7840 functional modes.

Table 7. Function Table ⁽¹⁾

V _{CCI}	V _{CCO}	INPUT (IN _x) ⁽²⁾	OUTPUT ENABLE (EN ₂)	OUTPUT (OUT _x)	COMMENTS
PU	PU	H	H or open	H	Normal Operation: A channel output assumes the logic state of its input.
		L	H or open	L	
		Open	H or open	Default	Default mode: When IN _x is open, the corresponding channel output goes to its default logic state. Default= High for ISO7840 and Low for ISO7840F.
X	PU	X	L	Z	A low value of Output Enable causes the outputs to be high-impedance
PD	PU	X	H or open	Default	Default mode: When V _{CCI} is unpowered, a channel output assumes the logic state based on the selected default option. Default= High for ISO7840 and Low for ISO7840F. When V _{CCI} transitions from unpowered to powered-up, a channel output assumes the logic state of its input. When V _{CCI} transitions from powered-up to unpowered, channel output assumes the selected default state.
X	PD	X	X	Undetermined	When V _{CCO} is unpowered, a channel output is undetermined ⁽³⁾ . When V _{CCO} transitions from unpowered to powered-up, a channel output assumes the logic state of its input

- (1) V_{CCI} = Input-side V_{CC}; V_{CCO} = Output-side V_{CC}; PU = Powered up (V_{CC} ≥ 2.25 V); PD = Powered down (V_{CC} ≤ 1.7 V); X = Irrelevant; H = High level; L = Low level ; Z = High Impedance
- (2) A strongly driven input signal can weakly power the floating V_{CC} through an internal protection diode and cause undetermined output.
- (3) The outputs are in undetermined state when 1.7 V < V_{CCI}, V_{CCO} < 2.25 V.

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The ISO7840 device is a high-performance, quad-channel digital isolator with a 5.7-kV_{RMS} isolation voltage. The device comes with enable pins on each side that can be used to put the respective outputs in high impedance for multi-master driving applications and reduce power consumption. The ISO7840 device uses single-ended CMOS-logic switching technology. The supply voltage range is from 2.25 V to 5.5 V for both supplies, V_{CC1} and V_{CC2}. When designing with digital isolators, keep in mind that because of the single-ended design structure, digital isolators do not conform to any specific interface standard and are only intended for isolating single-ended CMOS or TTL digital signal lines. The isolator is typically placed between the data controller (that is, μ C or UART), and a data converter or a line transceiver, regardless of the interface type or standard.

9.2 Typical Application

Copyright © 2016, Texas Instruments Incorporated

Figure 18. Isolated Data Acquisition System for Process Control

Typical Application (continued)

9.2.1 Design Requirements

For this design example, use the parameters shown in [Table 8](#).

Table 8. Design Parameters

PARAMETER	VALUE
Supply voltage	2.25 to 5.5 V
Decoupling capacitor between V_{CC1} and GND1	0.1 μ F
Decoupling capacitor from V_{CC2} and GND2	0.1 μ F

9.2.2 Detailed Design Procedure

Unlike optocouplers, which require external components to improve performance, provide bias, or limit current, the ISO7840 device only requires two external bypass capacitors to operate.

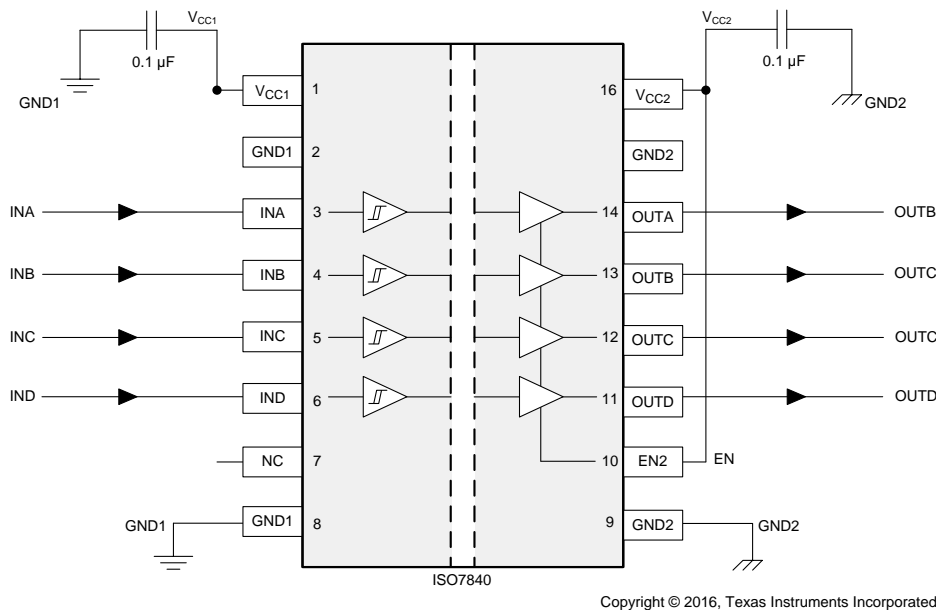

Figure 19. Typical ISO7840 Circuit Hook-Up

9.2.2.1 Electromagnetic Compatibility (EMC) Considerations

Many applications in harsh industrial environment are sensitive to disturbances such as electrostatic discharge (ESD), electrical fast transient (EFT), surge, and electromagnetic emissions. These electromagnetic disturbances are regulated by international standards such as IEC 61000-4-x and CISPR 22. Although system-level performance and reliability depends, to a large extent, on the application board design and layout, the ISO7840 device incorporates many chip-level design improvements for overall system robustness. Some of these improvements include

- Robust ESD protection cells for input and output signal pins and inter-chip bond pads.
- Low-resistance connectivity of ESD cells to supply and ground pins.
- Enhanced performance of high voltage isolation capacitor for better tolerance of ESD, EFT and surge events.
- Bigger on-chip decoupling capacitors to bypass undesirable high energy signals through a low impedance path.
- PMOS and NMOS devices isolated from each other by using guard rings to avoid triggering of parasitic SCRs.
- Reduced common mode currents across the isolation barrier by ensuring purely differential internal operation.

9.2.3 Application Curve

The typical eye diagram of the ISO7840 device indicates low jitter and wide open eye at the maximum data rate of 100 Mbps.

Figure 20. Eye Diagram at 100 Mbps PRBS, 5 V and 25°C

10 Power Supply Recommendations

To help ensure reliable operation at data rates and supply voltages, a 0.1- μ F bypass capacitor is recommended at input and output supply pins (V_{CC1} and V_{CC2}). The capacitors should be placed as close to the supply pins as possible. If only a single primary-side power supply is available in an application, isolated power can be generated for the secondary-side with the help of a transformer driver such as Texas Instruments [SN6501](#). For such applications, detailed power supply design and transformer selection recommendations are available in the [SN6501](#) data sheet ([SLLSEA0](#)).

11 Layout

11.1 Layout Guidelines

A minimum of four layers is required to accomplish a low EMI PCB design (see [Figure 21](#)). Layer stacking should be in the following order (top-to-bottom): high-speed signal layer, ground plane, power plane and low-frequency signal layer.

- Routing the high-speed traces on the top layer avoids the use of vias (and the introduction of their inductances) and allows for clean interconnects between the isolator and the transmitter and receiver circuits of the data link.
- Placing a solid ground plane next to the high-speed signal layer establishes controlled impedance for transmission line interconnects and provides an excellent low-inductance path for the return current flow.
- Placing the power plane next to the ground plane creates additional high-frequency bypass capacitance of approximately 100 pF/inch².
- Routing the slower speed control signals on the bottom layer allows for greater flexibility as these signal links usually have margin to tolerate discontinuities such as vias.

If an additional supply voltage plane or signal layer is needed, add a second power or ground plane system to the stack to keep it symmetrical. This makes the stack mechanically stable and prevents it from warping. Also the power and ground plane of each power system can be placed closer together, thus increasing the high-frequency bypass capacitance significantly.

For detailed layout recommendations, see the application note, *Digital Isolator Design Guide* ([SLLA284](#)).

11.1.1 PCB Material

For digital circuit boards operating at less than 150 Mbps, (or rise and fall times greater than 1 ns), and trace lengths of up to 10 inches, use standard FR-4 UL94V-0 printed circuit board. This PCB is preferred over cheaper alternatives because of lower dielectric losses at high frequencies, less moisture absorption, greater strength and stiffness, and the self-extinguishing flammability-characteristics.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
